SELECTIONS FROM RUSKIN:

SECOND SERIES.

I. ART.

I. ABBEVILLE.—About the moment in the forenoon when the modern fashionable traveller, intent on Paris, Nice, and Monaco, and started by the morning mail from Charing Cross, has a little recovered himself from the qualms of his crossing, and the irritation of fighting for seats at Boulogne, and begins to look at his watch to see how near he is to the buffet of Amiens, he is apt to be baulked and worried by the train's useless stop at one inconsiderable station, lettered ABBEVILLE. As the carriage gets in motion again, he may see, if he cares to lift his eyes for an instant from his newspaper, two square towers, with a curiously attached bit of traceried arch, dominant over the poplars and osiers of the marshy level he is traversing. Such glimpse is probably all he will ever wish to get of them; and I scarcely know how far I can make even

the most sympathetic reader understand their power over my own life. . . .

For here I saw that art (of its local kind), religion, and present human life, were yet in perfect harmony. There were no dead six days and dismal seventh in those sculptured churches; there was no beadle to lock me out of them, or pew-shutter to shut me in. I might haunt them, fancying myself a ghost; peep round their pillars, like Rob Roy; kneel in them, and scandalize nobody; draw in them, and disturb none. Outside, the faithful old town gathered itself, and nestled under their buttresses like a brood beneath the mother's wings; the quiet, uninjurious aristocracy of the newer town opened into silent streets, between self-possessed and hidden dignities of dwelling, each with its courtyard and richly trellised garden. The commercial square, with the main street of traverse, consisted of uncompetitive shops, such as were needful, of the native wares: cloth and hosiery spun, woven, and knitted within the walls; cheese of neighbouring Neuchatel; fruit of their own gardens, bread from the fields above the green coteaux; meat of their herds, untainted by American tin; smith's work of sufficient scythe and ploughshare, hammered on the open anvil; groceries dainty, the coffee generally roasting odoriferously in the street, before the door; for the modistes,—well, perhaps a bonnet or two from

Paris, the rest, wholesome dress for peasant and dame of Ponthieu. Above the prosperous, serenely busy and beneficent shop, the old dwelling-house of its ancestral masters ; pleasantly carved, proudly roofed, keeping its place, and order, and recognised function, unfailing, unenlarging, for centuries. Round all, the breezy ramparts, with their long waving avenues ; through all, in variously circuiting cleanness and sweetness of navigable river and active millstream, the green chalk-water of the Somme.—*Præterita*, I. IX.

2. CONDITIONS OF ARCHITECTURE.—All lovely architecture was designed for cities in cloudless air ; for cities in which piazzas and gardens opened in bright populousness and peace ; cities built that men might live happily in them, and take delight daily in each other's presence and powers. But our cities, built in black air which, by its accumulated foulness, first renders all ornament invisible in distance, and then chokes its interstices with soot ; cities which are mere crowded masses of store, and warehouse, and counter, and are therefore to the rest of the world what the larder and cellar are to a private house ; cities in which the object of men is not life, but labour ; and in which all chief magnitude of edifice is to enclose machinery ; cities in which the streets are not the avenues for the passing and procession of a happy people,

but the drains for the discharge of a tormented mob, in which the only object in reaching any spot is to be transferred to another; in which existence becomes mere transition, and every creature is only one atom in a drift of human dust, and current of interchanging particles, circulating here by tunnels underground, and there by tubes in the air; for a city, or cities, such as this no architecture is possible—nay, no desire of it is possible to their inhabitants.—*Study of Architecture* (O. R., I., § 277).

3. EARLY VENICE.—For the whole of her first seven hundred years of work and war, Venice was in great part a wooden town; the houses of the noble mainland families being for long years chiefly at Heraclea, and on other islands; nor they magnificent, but farm-villas mostly. Far too much stress has been generally laid on the fishing and salt-works of early Venice, as if they were her only businesses; nevertheless at least you may be sure of this much, that for seven hundred years Venice had more likeness in her to old Yarmouth than to new Pall Mall; and that you might come to shrewder guess of what she and her people were like, by living for a year or two lovingly among the herring-catchers of Yarmouth Roads, or the boatmen of Deal or Boscastle, than by reading any lengths of eloquent history. But you are to know also, and

remember always, that this amphibious city—this Phocæa, or sea-dog of towns,—looking with soft human eyes at you from the sand, Proteus himself latent in the salt-smelling skin of her,—had fields, and plots of garden here and there; and far and near, sweet woods of Calypso, graceful with quivering sprays, for woof of nests—gaunt with forked limbs for ribs of ships; had good milk and butter from familiarly couchant cows; thickets wherein familiar birds could sing;—and finally was observant of cloud and sky, as pleasant and useful phenomena. And she had at due distances among her simple dwellings, stately churches of marble.—*St. Mark's Rest*, VI.

4. NEST BUILDING.—The other day, as I was calling on the ornithologist whose collection of birds is, I suppose, altogether unrivalled in Europe,—(at once a monument of unwearied love of science, and an example, in its treatment, of the most delicate and patient art)—Mr. Gould—he showed me the nest of a common English bird; a nest which, notwithstanding his knowledge of the dexterous building of birds in all the world, was not without interest even to him, and was altogether amazing and delightful to me. It was a bullfinch's nest, which had been set in the fork of a sapling tree, where it needed an extended foundation. And the bird had built this first story of her nest with withered stalks of

clematis blossom ; and with nothing else. These twigs it had interwoven lightly, leaving the branched heads all at the outside, producing an intricate Gothic boss of extreme grace and quaintness, apparently arranged both with triumphant pleasure in the art of basket-making, and with definite purpose of obtaining ornamental form.

I fear there is no occasion to tell you that the bird had no purpose of the kind. I say that I *fear* this, because I would much rather have to undeceive you in attributing too much intellect to the lower animals, than too little. But I suppose the only error which, in the present condition of natural history, you are likely to fall into, is that of supposing that a bullfinch is merely a mechanical arrangement of nervous fibre, covered with feathers by a chronic cutaneous eruption ; and impelled by a galvanic stimulus to the collection of clematis.

You would be in much greater, as well as in a more shameful, error, in supposing this, than if you attributed to the bullfinch the most deliberate rivalry with Mr. Street's prettiest Gothic designs. The bird has exactly the degree of emotion, the extent of science, and the command of art, which are necessary for its happiness ; it had felt the clematis twigs to be lighter and tougher than any others within its reach, and probably found the forked branches of them

convenient for reticulation. It had naturally placed these outside, because it wanted a smooth surface for the bottom of its nest; and the beauty of the result was much more dependent on the blossoms than the bird.

Nevertheless, I am sure that if you had seen the nest,—much more, if you had stood beside the architect at work upon it,—you would have greatly desired to express your admiration to her; and that if Wordsworth, or any other simple and kindly person, could even wish, for a little flower's sake,

“That to this mountain daisy's self were known
The beauty of its star-shaped shadow, thrown
On the smooth surface of this naked stone,”

much more you would have yearned to inform the bright little nest-builder of your sympathy; and to explain to her, on art principles, what a pretty thing she was making.

Does it never occur to you, then, that to some of the best and wisest artists among ourselves, it may not be always possible to explain what pretty things they are making; and that, perhaps, the very perfection of their art is in their knowing so little about it?

Whether it has occurred to you or not, I assure you that it is so. The greatest artists, indeed, will condescend, occasionally, to be scientific;—will labour, somewhat systematically, about what

they are doing, as vulgar persons do; and are privileged, also, to enjoy what they have made more than birds do; yet seldom, observe you, as being beautiful, but very much in the sort of feeling which we may fancy the bullfinch had also,—that the thing, whether pretty or ugly, could not have been better done; that they could not have made it otherwise, and are thankful it is no worse. And, assuredly, they have nothing like the delight in their own work which it gives to other people.

But putting the special simplicities of good artists out of question, let me ask you, in the second place, whether it is not possible that the same sort of simplicity might be desirable in the whole race of mankind: and that we ought all to be doing human work which would appear better done to creatures much above us, than it does to ourselves. Why should not *our* nests be as interesting things to angels, as bullfinches' nests are to us?

You will, probably, both smile at, and shrink from, such a supposition, as an insolent one. But to my thought, it seems, on the contrary, the only modest one. That *we* should be able to admire the work of angels seems to me the impertinent idea; not, at all, that they should be able to admire ours.

Under existing circumstances, I confess the difficulty. It cannot be imagined that either the

back streets of our manufacturing towns, or the designs of our suburban villas, are things which the angels desire to look into: but it seems to me an inevitably logical conclusion that if we are, indeed, the highest of the brute creation, we should, at least, possess as much unconscious art as the lower brutes; and build nests which shall be, for ourselves, entirely convenient; and may, perhaps, in the eyes of superior beings, appear more beautiful than to our own.—*E. N.*, III., § 48-54.

5. OLD HOUSE AT STRASBOURG, DRAWN BY PROUT.—The carvings of its woodwork are in a style altogether provincial, yet of which the origin is very distant. The delicate Renaissance architecture of Italy was affected, even in its finest periods, by a tendency to throw out convex masses at the bases of its pillars; the wood-carvers of the 16th century adopted this bulged form as their first element of ornamentation, and these windows of Strasbourg are only imitations by the German peasantry of what, in its finest type, you must seek as far away as the Duomo of Bergamo.

But the burgher, or peasant, of Alsace enjoyed his rude imitation—adapted, as it was, boldly and frankly to the size of his house and the grain of the larch logs of which he built it—ininitely more than the refined Italian enjoyed the floral

luxuriance of his marble; and all the treasures of a great exhibition could not have given him the tenth part of the exultation with which he saw the gable of his roof completed over its jutting fret-work; and wrote among the rude intricacies of its sculpture, in flourished black letter, that "He and his wife had built their house with God's help, and prayed Him to let them live long in it,—they, and their children."

But it is not only the rustic method of architecture which I wish you to note in this plate; it is the rustic method of drawing also. The manner in which these blunt timber carvings are drawn by Prout is just as provincial as the carving themselves. Born in a far-away district of England, and learning to draw, unhelped, with fishing-boats for his models; making his way instinctively until he had command of his pencil enough to secure a small income by lithographic drawing; and finding picturesque character in buildings from which all the finest lines of their carving had been effaced by time;—possessing also an instinct in the expression of such subjects so peculiar as to win for him a satisfying popularity, and, far better, to enable him to derive perpetual pleasure in the seclusion of country hamlets, and the quiet streets of deserted cities, —Prout had never any motive to acquaint himself with the refinements, or contend with the difficulties, of a more accomplished art. So far from

this, his manner of work was, by its very imperfection, in the most perfect sympathy with the subjects he enjoyed. The broad chalk touches in which he has represented to us this house at Strasbourg are entirely sufficient to give true idea of its effect. To have drawn its ornaments with subtlety of Leonardesque delineation would only have exposed their faults, and mocked their rusticity. The drawing would have become painful to you from the sense of the time which it had taken to represent what was not worth the labour, and to direct your attention to what could only, if closely examined, be matter of offence. But here you have a simple and provincial draughtsman happily and adequately expressing a simple and provincial architecture; nor could either builder or painter have become wiser, but to their loss.

Is it then, you will ask me, seriously to be recommended, and, however recommendable, is it possible, that men should remain contented with attainments which they know to be imperfect? and that now, as in former times, large districts of country, and generations of men, should be enriched or amused by the products of a clumsy ignorance? I do not know how far it is possible, but I know that wherever you desire to have true art, it is necessary. Ignorance, which is contented and clumsy, will produce what is imperfect, but not offensive. But ignorance *discontented*

and dexterous, learning what it cannot understand, and imitating what it cannot enjoy, produces the most loathsome forms of manufacture that can disgrace or mislead humanity. Some years since, as I was looking through the modern gallery at the quite provincial German School of Düsseldorf, I was fain to leave all their epic and religious designs, that I might stay long before a little painting of a shepherd boy carving his dog out of a bit of deal. The dog was sitting by, with the satisfied and dignified air of a personage about for the first time in his life to be worthily represented in sculpture; and his master was evidently succeeding to his mind in expressing the features of his friend. The little scene was one which, as you know, must take place continually among the cottage artists who supply the toys of Nuremberg and Berne. Happy, these! so long as, undisturbed by ambition, they spend their leisure time in work pretending only to amuse, yet capable, in its own way, of showing accomplished dexterity, and vivid perception of nature. We, in the hope of doing great things, have surrounded our workmen with Italian models, and tempted them with prizes into competitive mimicry of all that is best, or that we imagine to be best, in the work of every people under the sun. And the result of our instruction is only that we are able to produce,—I am now quoting the statement I made last May, “the most

perfectly and roundly ill-done things" that ever came from human hands. . . .

Be assured that you can no more drag or compress men into perfection than you can drag or compress plants. If ever you find yourselves set in positions of authority, and are entrusted to determine modes of education, ascertain first what the people you would teach have been in the habit of doing, and encourage them to do *that* better. Set no other excellence before their eyes; disturb none of their reverence for the past; do not think yourselves bound to dispel their ignorance, or to contradict their superstitions; teach them only gentleness and truth; redeem them by example from habits which you know to be unhealthy or degrading; but cherish, above all things, *local associations*, and *hereditary skill*.

It is the curse of so-called civilization to pretend to originality by the wilful invention of new methods of error, while it quenches, wherever it has power, the noble originality of nations, rising out of the purity of their race, and the love of their native land.—*E. N.*, V., § 86–88, 94.

6. COTTAGE-BUILDING.—I was infinitely struck, only the other day, by the saying of a large landed proprietor (a good man, who was doing all he could for his tenantry, and building new cottages for them), that the best he *could* do for them, under present conditions of wages, and the like.

was, to give them good drainage and bare walls.

"I am obliged," he said to me, "to give up all thought of anything artistic, and even then, I must lose a considerable sum on every cottage I build."

Now, there is no end to the confused states of wrong and misery which that landlord's experience signifies. In the first place, no landlord has any business with building cottages for his people. Every peasant should be able to build his own cottage,—to build it to his mind; and to have a mind to build it too. In the second place, note the unhappy notion which has grown up in the modern English mind, that wholesome and necessary delight in what is pleasant to the eye, is artistic affectation. You have the exponent of it all in the central and mighty affectation of the Houses of Parliament. A number of English gentlemen get together to talk; they have no delight whatever in any kind of beauty; but they have a vague notion that the appointed place for their conversation should be dignified and ornamental; and they build over their combined heads the absurdest and emptiest piece of filigree,—and, as it were, eternal foolscap in freestone,—which ever human beings disgraced their posterity by. Well, all that is done, partly, and greatly, in mere jobbery; but essentially also in a servile imitation of the Hôtel-de-Ville builders of old time; but

the English gentleman has not the remotest idea that when Hôtels-de-Ville were built, the ville enjoyed its hotel;—the town had a real pride in its town hall, and place of council; and the sculptures of it had precious meaning for all the populace.

And in like manner, if cottages are ever to be wisely built again, the peasant must enjoy his cottage, and be himself its artist, as a bird is. Shall cock-robins and yellow-hammers have wit enough to make themselves comfortable, and bulfinches peck a Gothic tracery out of dead clematis,—and your English yeoman be fitted by his landlord with four dead walls and a drain-pipe? That is the result of your spending 300,000*l.* a year at Kensington in science and art, then? You have made beautiful machines, too, where-with you save the peasant the trouble of ploughing and reaping, and threshing; and after being saved all that time and toil, and getting, one would think, leisure enough for his education, you have to lodge him also, as you drop a puppet into a deal box, and you lose money in doing it! and two hundred years ago, without steam, without electricity, almost without books, and altogether without help from “Cassell’s Educator” or the morning newspapers, the Swiss shepherd could build himself a *châlet*, daintily carved, and with flourished inscriptions, and with red and blue and white *ποικιλία*; and the burgess of Strasbourg

could build himself a house like this I showed you, and a spire such as all men know ; and keep a precious book or two in his public library, and praise God for all : while we,—what are *we* good for, but to damage the spire,* knock down half the houses, and burn the library,—and declare there is no God but chemistry?—*E. N.*, IX., § 200–202.

7. AN ALPINE VILLAGE.—A mile or two beyond the Nant d'Arpenaz, the road ascends over a bank of crumbling flakes of shale, which the little stream, pendent like a white thread over the mid-cliff of the Aiguille de Varens, drifts down before it in summer rain, lightly as dead leaves. The carriage dips into the trough of the dry bed, descends the gentle embankment on the other side, and turns into the courtyard of the inn under one of the thin arches, raised a foot or two above the gap in the wall, which give honourable distinction either to the greater vineyards or open courts, like this one, of hospitable houses. Stableyard, I should have said, not courtyard ; no palatial pride of seclusion, like M. Dessein's, but a mere square of irregular stable,—not even coach-house, though with room for a carriage or two : but built only for shelter of the now unknown char-à-banc, a seat for three between two pairs of wheels, with a plank

[* Written during the Franco-Prussian war.]

for footing, at a convenient step from the ground. The fourth side of the yard was formed by the front of the inn, which stood with its side to the road, its back to the neglected garden and incorrigible streamlet: a two-storied building of solid gray stone, with gabled roof and garrets; a central passage on the second floor giving access to the three or four bedrooms looking to back and front, and at the end to an open gallery over the road. The last room on the left, larger than the rest, and with a window opening on the gallery, used to be my father's and mother's; that next it, with one square window in the solid wall, looking into the yard, mine. Floors and partitions all of rough-sawn larch; the planks of the passage floor uncomfortably thin and bending, as if one might easily fall through; some pretence of papering, I think, in the old people's state room. A public room, about the size of my present study, say twelve paces by six within its cupboards, and usually full of flies, gave us the end of its table for meals, and was undisturbed through the day, except during the hour when the diligence dined.

I should have said that my square window looked *over*, rather than *into* the yard, for one could scarcely see anything going on there, but by putting one's head out: the real and prevalent prospect was first into the leaves of

the walnut tree in the corner; then of the mossy stable roofs behind them; then of the delicately tin-mailed and glittering spire of the village church; and beyond these, the creamy, curdling, overflowing seas of snow on the Mont Blanc de St. Gervais. The Aiguille de Bionnassay, the most graceful buttress ridge in all the Alps, and Mont Blanc himself, above the full fronts of the Aiguille and Dome du Gouté, followed further to the left. So much came into the field of that little four-feet-square casement.

If one had a mind for a stroll, in half a minute's turn to the left from the yard gate, one came to the aforesaid village church, the size of a couple of cottages, and one could lean, stooping, to look at it, on the deeply lichened stones of its low churchyard wall, which enclosed the cluster of iron crosses,—floretted with everlastings, or garlands of fresh flowers if it was just after Sunday, —on two sides; the cart-path to the upper village branching off round it from the road to Chamouni. Fifty yards farther, one came to the single-arched bridge by which the road to Sallenche, again dividing from that of Chamouni, crosses the Arve, clearing some sixty feet of strongly-rushing water with a leap of lovely elliptic curve; lovely, because here traced with the lightest possible substance of masonry, rising to its ridge without a pebble's weight to spare, and then signed for sacred pontifical work by a cross high above the

parapet, seen from as far as one can see the bridge itself.

Neither line, nor word, nor colour, has ever yet given rendering of the rich confusions of garden and cottage through which the winding paths ascend above the church; walled, not with any notion of guarding the ground, except from passing herds of cattle and goats, but chiefly to get the stones of the surface into narrowest compass, and, with the easy principle of horticulture,—plant everything, and let what can, grow;—the under-crops of unkempt pease, potatoes, cabbage, hemp, and maize, content with what sun can get down to them through luxuriantly-branched apple and plum trees, and towering shade of walnuts, with trunks eight or ten feet in girth; a little space left to light the fronts of the cottages themselves, whose roof and balconies, the vine seem to think, have been constructed for their pleasure only, and climb, wreath, and swing themselves about accordingly wherever they choose, tossing their young tendrils far up into the blue sky of spring, and festooning the balconies in autumn with Correggian fresco of purple, relieved against the pendent gold of the harvested maize.

The absolute seclusion and independence of this manner of rural life, totally without thought or forethought of any foreign help or parsimonious store, drinking its wine out of the cluster, and saving of the last year's harvest only seed for the

next,—the serene *laissez faire* given to God and nature, with thanks for the good, and submission to the temporary evil of blight or flood, as due to sinful mortality; and the persistence, through better or worse, in their fathers' ways, and use of their fathers' tools, and holding to their fathers' names and fields, faithfully as the trees to their roots, or the rocks to their wild flowers,—all this beside us for our Sunday walk, with the gray, inaccessible walls of the Tower of Arpenaz above, dim in their distant height, and all the morning air twice brighter for the glow of the cloudless glaciers, gave me a deeper and more wonderful joy than all the careful beauty and disciplined rightness of the Bernese Oberland, or the stately streets even of my dearest cities of Italy.—*Præterita*, II. XI.

8. THE ORIGIN OF ART.—Some years ago, having been always desirous that the education of women should begin in learning how to cook, I got leave, one day, for a little girl of eleven years old to exchange, much to her satisfaction, her schoolroom for the kitchen. But as ill-fortune would have it, there was some pastry toward, and she was left unadvisedly in command of some delicately rolled paste; whereof she made no pies, but an unlimited quantity of cats and mice.

Now you may read the works of the gravest

critics of art from end to end; but you will find, at last, they can give you no other true account of the spirit of sculpture than that it is an irresistible human instinct for the making of cats and mice, and other imitable living creatures, in such permanent form that one may play with the images at leisure.

Play with them, or love them, or fear them, or worship them. The cat may become the goddess Pasht, and the mouse, in the hand of a sculptured king, enforce his enduring words "*ἐς ἐμέ τις ὀρέων εὐσεβὴς ἔστω*"; but the great mimetic instinct underlies all such purpose; and is zooplastic, —life-shaping,—alike in the reverent and the impious.

Is, I say, and has been, hitherto; none of us dare say that it will be. I shall have to show you hereafter that the greater part of the technic energy of men, as yet, has indicated a kind of childhood; and that the race becomes, if not more wise, at least more manly, with every gained century. I can fancy that all this sculpturing and painting of ours may be looked back upon, in some distant time, as a kind of doll-making, and that the words of Sir Isaac Newton may be smiled at no more: only it will not be for stars that we desert our stone dolls, but for men. When the day comes, as come it must, in which we no more deface and defile God's image in living clay, I am not sure that we shall any of us

care so much for the images made of Him, in burnt clay.

But, hitherto, the energy of growth in any people may be almost directly measured by their passion for imitative art; namely, for sculpture, or for the drama, which is living and speaking sculpture, or, as in Greece, for both; and in national as in actual childhood, it is not merely the *making*, but the *making-believe*; not merely the acting for the sake of the scene, but acting for the sake of acting, that is delightful. And, of the two mimetic arts, the drama, being more passionate, and involving conditions of greater excitement and luxury, is usually in its excellence the sign of culminating strength in the people; while fine sculpture, requiring always submission to severe law, is an unfailing proof of their being in early and active progress. *There is no instance of fine sculpture being produced by a nation either torpid, weak, or in decadence.* Their drama may gain in grace and wit; but their sculpture, in days of decline, is *always* base.

If my little lady in the kitchen had been put in command of colours, as well as of dough, and if the paste would have taken the colours, we may be sure her mice would have been painted brown, and her cats tortoiseshell; and this, partly indeed for the added delight and prettiness of colour itself, but more for the sake of absolute realisation to her eyes and mind. Now

all the early sculpture of the most accomplished nations has been thus coloured, rudely or finely ; and therefore you see at once how necessary it is that we should keep the term "graphic" for imitative art generally ; since no separation can at first be made between carving and painting, with reference to the mental powers exerted in, or addressed by, them. In the earliest known art of the world, a reindeer hunt may be scratched in outline on the flat side of a clean-picked bone, and a reindeer's head carved out of the end of it ; both these are flint-knife work, and, strictly speaking, sculpture : but the scratched outline is the beginning of drawing, and the carved head of sculpture proper. When the spaces enclosed by the scratched outline are filled with colour, the colouring soon becomes a principal means of effect ; so that, in the engraving of an Egyptian-colour bas-relief Rosellini has been content to miss the outlining incisions altogether, and represent it as a painting only. Its proper definition is "painting accented by sculpture ;" on the other hand, in solid coloured statues,—Dresden china figures, for example,—we have pretty sculpture accented by painting ; the mental purpose in both kinds of art being to obtain the utmost degree of realisation possible, and the ocular impression being the same, whether the delineation is obtained by engraving or painting.

And now observe that, while the graphic arts

begin in the mere mimetic effort, they proceed, as they obtain more perfect realisation, to act under the influence of a stronger and higher instinct. They begin by scratching the reindeer, the most interesting object of sight. But presently, as the human creature rises in scale of intellect, it proceeds to scratch, not the most interesting object of sight only, but the most interesting object of imagination; not the reindeer, but the Maker and Giver of the reindeer. And the second great condition for the advance of the art of sculpture is that the race should possess, in addition to the mimetic instinct, the realistic or idolising instinct; the desire to see as substantial the powers that are unseen, and bring near those that are far off, and to possess and cherish those that are strange. To make in some way tangible and visible the nature of the gods—to illustrate and explain it by symbols; to bring the immortals out of the recesses of the clouds, and make them Penates; to bring back the dead from darkness, and make them Lares. . . .

This, then, is the second instinct necessary to sculpture; the desire for the manifestation, description, and companionship of unknown powers; and for possession of a bodily substance—the “bronze Strasbourg,” which you can embrace, and hang immortelles on the head of—instead of an abstract idea. But if you get nothing more in the depth of the national mind

than these two feelings, the mimetic and idolising instincts, there may be still no progress possible for the arts except in delicacy of manipulation and accumulative caprice of design. You must have not only the idolising instinct, but an *ἦθος* which chooses the right thing to idolise! Else, you will get states of art like those in China or India, non-progressive, and in great part diseased and frightful, being wrought under the influence of foolish terror, or foolish admiration. So that a third condition, completing and confirming both the others, must exist in order to the development of the creative power.

This third condition is that the heart of the nation shall be set on the discovery of just or equal law, and shall be from day to day developing that law more perfectly. The Greek school of sculpture is formed during, and in consequence of, the national effort to discover the nature of justice; the Tuscan, during, and in consequence of, the national effort to discover the nature of justification. I assert to you at present briefly, what will, I hope, be the subject of prolonged illustration hereafter.

Now when a nation with mimetic instinct and imaginative longing is also thus occupied earnestly in the discovery of Ethic law, that effort gradually brings precision and truth into all its manual acts; and the physical progress of sculpture, as in the Greek, so in the Tuscan,

school, consists in gradually *limiting* what was before indefinite, in *verifying* what was inaccurate, and in *humanising* what was monstrous. I might perhaps content you by showing these external phenomena, and by dwelling simply on the increasing desire of naturalness, which compels, in every successive decade of years, literally, in the sculptured images, the mimicked bones to come together, bone to his bone; and the flesh to come up upon them, until from a flattened and pinched handful of clay, respecting which you may gravely question whether it was intended for a human form at all;—by slow degrees, and added touch to touch, in increasing consciousness of the bodily truth,—at last the Aphrodite of Melos stands before you, a perfect woman. But all that search for physical accuracy is merely the external operation, in the arts, of the seeking for truth in the inner soul; it is impossible without that higher effort, and the demonstration of it would be worse than useless to you, unless I made you aware at the same time of its spiritual cause.—*A. P.*, II., § 29–33, 39–41.

9. ART IN ITS YOUTH.—The summary which I have to give you of the course of Pagan and Gothic Art must be understood as kept wholly on this side of the Bosphorus, and recognising no farther shore beyond the Mediterranean. Thus fixing our termini, you find from the

earliest times, in Greece and Italy, a multitude of artists gradually perfecting the knowledge and representation of the human body, glorified by the exercises of war. And you have, north of Greece and Italy, innumerable and incorrigibly savage nations, representing, with rude and irregular efforts, on huge stones, and ice-borne boulders, on cave-bones and forest-stocks and logs, with any manner of innocent tinting or scratching possible to them, sometimes beasts, sometimes hobgoblins—sometimes, heaven only knows what; but never attaining any skill in figure-drawing, until, whether invading or invaded, Greece and Italy teach them what a human being is like; and with that help they dream and blunder on through the centuries, achieving many fantastic and amusing things, more especially the art of rhyming, whereby they usually express their notions of things far better than by painting. Nevertheless, in due course we get a Holbein out of them; and, in the end, for best product hitherto, Sir Joshua, and the supremely Gothic Gainsborough, whose last words we may take for a beautiful reconciliation of all schools and souls who have done their work to the best of their knowledge and conscience,—“We are all going to Heaven, and Vandyke is of the company.”

“We are all going to Heaven.” Either that is true of men and nations, or else that they are

going the other way; and the question of questions for them is—not how far from heaven they are, but whether they are going to it. Whether in Gothic or Classic Art, it is not the wisdom or the barbarism that you have to estimate—not the skill nor the rudeness;—but the *tendency*. . . .

Remember, therefore, and write it on the very tables of your heart, that you must never, when you have to judge of character in national styles, regard them in their decadence, but always in their spring and youth.—*A. E.*, III.

10. GREEK ART.—The reason that Greek art, on the whole, bores you, (and you know it does,) is that you are always forced to look in it for something that is not there; but which may be seen every day, in real life, all round you; and which you are naturally disposed to delight in, and ought to delight in. For the Greek race was not at all one of exalted beauty, but only of general and healthy completeness of form. They were only, and could be only, beautiful in body to the degree that they were beautiful in soul; (for you will find, when you read deeply into the matter, that the body is only the soul made visible). And the Greeks were indeed very good people, much better people than most of us think, or than many of us are; but there are better people alive now than the best of them, and lovelier people to be seen now, than the loveliest of them.

Then, what *are* the merits of this Greek art, which make it so exemplary for you? Well, not that it is beautiful, but that it is Right. All that it desires to do, it does, and all that it does, does well. You will find, as you advance in the knowledge of art, that its laws of self-restraint are very marvellous; that its peace of heart, and contentment in doing a simple thing, with only one or two qualities, restrictedly desired, and sufficiently attained, are a most wholesome element of education for you, as opposed to the wild writhing, and wrestling, and longing for the moon, and tilting at windmills, and agony of eyes, and torturing of fingers, and general spinning out of one's soul into fiddlestrings, which constitute the ideal life of a modern artist.

Also observe, there is entire masterhood of its business up to the required point. A Greek does not reach after other people's strength, nor out-reach his own. He never tries to paint before he can draw; he never tries to lay on flesh where there are no bones; and he never expects to find the bones of anything in his inner consciousness. Those are his first merits—sincere and innocent purpose, strong common sense and principle, and all the strength that comes of these, and all the grace that follows on that strength. . . .

A kind of art this, surely, to be looked at, and thought upon sometimes with profit, even in these latter days.

To be looked at sometimes. Not continually, and never as a model for imitation. For you are not Greeks; but, for better or worse, English creatures; and cannot do, even if it were a thousand times better worth doing, anything well, except what your English hearts shall prompt, and your English skies teach you. For all good art is the natural utterance of its own people in its own day.—*Q. A.*, III., § 168, 169, 176.

II. IRISH ART AND CHARACTER.—In the eighth century Ireland possessed a school of art in her manuscripts and sculpture, which, in many of its qualities—apparently in all essential qualities of decorative invention—was quite without rival; seeming as if it might have advanced to the highest triumphs in architecture and in painting. But there was one fatal flaw in its nature, by which it was stayed, and stayed with a conspicuousness of pause to which there is no parallel: so that, long ago, in tracing the progress of European schools from infancy to strength, I chose for the students of Kensington, in a lecture since published, two characteristic examples of early art, of equal skill; but in the one case, skill which was progressive—in the other, skill which was at pause. In the one case, it was work receptive of correction—hungry for correction; and in the other, work which inherently rejected correction. I chose for them a

corrigible Eve, and an incorrigible Angel, and I grieve to say that the incorrigible Angel was also an Irish Angel!

And the fatal difference lay wholly in this. In both pieces of art there was an equal falling short of the needs of fact; but the Lombardic Eve knew she was in the wrong, and the Irish Angel thought himself all right. The eager Lombardic sculptor, though firmly insisting on his childish idea, yet showed in the irregular broken touches of the features, and the imperfect struggle for softer lines in the form, a perception of beauty and law that he could not render; there was a strain of effort, under conscious imperfection, in every line. But the Irish missal-painter had drawn his angel with no sense of failure, in happy complacency, and put red dots into the palms of each hand, and rounded the eyes into perfect circles, and, I regret to say, left the mouth out altogether, with perfect satisfaction to himself.

May I without offence ask you to consider whether this mode of arrest in ancient Irish art may not be indicative of points of character which even yet, in some measure, arrest your national power? I have seen much of Irish character, and have watched it closely, for I have also much loved it. And I think the form of failure to which it is most liable is this,—that being generous-hearted, and wholly intending always to do right, it does not attend to the external laws

of right, but thinks it must necessarily do right because it means to do so, and therefore does wrong without finding it out; and then, when the consequences of its wrong come upon it, or upon others connected with it, it cannot conceive that the wrong is in anywise of its causing or of its doing, but flies into wrath, and a strange agony of desire for justice, as feeling itself wholly innocent, which leads it farther astray, until there is nothing that it is not capable of doing with a good conscience.

But mind, I do not mean to say that, in past or present relations between Ireland and England, you have been wrong, and we right. Far from that, I believe that in all great questions of principle, and in all details of administration of law, you have been usually right, and we wrong; sometimes in misunderstanding you, sometimes in resolute iniquity to you. Nevertheless, in all disputes between states, though the stronger is nearly always mainly in the wrong, the weaker is often so in a minor degree; and I think we sometimes admit the possibility of our being in error, and you never do.—*S. and L.*, III., § 123. 126.

12. SAXON ART AND CHARACTER.—It is more and more wonderful to me as I think of it, that no effect whatever was produced on the Saxon, nor on any other healthy race of the North, either by the luxury of Rome, or by her

art, whether constructive or imitative. The Saxon builds no aqueducts—designs no roads, rounds no theatres in imitation of her,—envies none of her vile pleasures,—admires, so far as I can judge, none of her far-carried realistic art. I suppose that it needs intelligence of a more advanced kind to see the qualities of complete sculpture: and that we may think of the Northern intellect as still like that of a child, who cares to picture its own thoughts in its own way, but does not care for the thoughts of older people, or attempt to copy what it feels too difficult. This much at least is certain, that for one cause or another, everything that now at Paris or London our painters most care for and try to realise, of ancient Rome, was utterly innocuous and unattractive to the Saxon: while his mind was frankly open to the direct teaching of Greece and to the methods of bright decoration employed in the Byzantine Empire: for these alone seemed to his fancy suggestive of the glories of the brighter world promised by Christianity. Jewellery, vessels of gold and silver, beautifully written books, and music, are the gifts of St. Gregory alike to the Saxon and Lombard; all these beautiful things being used, not for the pleasure of the present life, but as the symbols of another; while the drawings in Saxon manuscripts, in which, better than in any other remains of their life, we can read the people's character, are rapid

endeavours to express for themselves, and convey to others, some likeness of the realities of sacred event in which they had been instructed. They differ from every archaic school of former design in this evident correspondence with an imagined reality. All previous archaic art whatsoever is symbolic and decorative—not realistic. The contest of Herakles with the Hydra on a Greek vase is a mere sign that such a contest took place, not a picture of it, and in drawing that sign the potter is always thinking of the effect of the engraved lines on the curves of his pot, and taking care to keep out of the way of the handle ;—but a Saxon monk would scratch his idea of the Fall of the angels or the Temptation of Christ over a whole page of his manuscript in variously explanatory scenes, evidently full of inexpressible vision, and eager to explain and illustrate all that he felt or believed. . . .

Quite the deepest-thoughted creatures of the then animate world, it seems to me, these Saxon ploughmen of the sand or the sea, with their worshipped deity of Beauty and Justice, a red rose on her banner, for best of gifts, and in her right hand, instead of a sword, a balance, for due doom, without wrath,—of retribution in her left. Far other than the Wends, though stubborn enough, they too, in battle rank,—seven times rising from defeat against Charlemagne, and unsubdued but by death—yet, by no means in that

John Bull's manner of yours, "averse to be interfered with," in their opinions, or their religion. Eagerly docile, on the contrary—joyfully reverent—instantly and gratefully acceptant of whatever better insight or oversight a stranger could bring them, of the things of God or man.—*Pleasures of England*, I., III.

13. NORMAN ART AND CHARACTER.—With far meaner thoughts, both of themselves and their powers, the Normans set themselves to build impregnable military walls, and sublime religious ones, in the best possible practical ways; but they no more made books of their church fronts than of their bastion flanks; and cared, in the religion they accepted, neither for its sentiments nor its promises, but only for its immediate results on national order.

As I read them, they were men wholly of this world, bent on doing the most in it, and making the best of it that they could;—men, to their death, of *Deed*, never pausing, changing, repenting, or anticipating, more than the completed square, ἀνὲν ψόγου, of their battle, their keep, and their cloister. Soldiers before and after everything, they learned the lockings and bracings of their stones primarily in defence against the battering-ram and the projectile, and esteemed the pure circular arch for its distributed and equal strength more than for its beauty. . . .

I have just said that they valued religion chiefly for its influence of order in the present world: being in this, observe, as nearly as may be the exact reverse of modern believers, or persons who profess to be such,—of whom it may be generally alleged, too truly, that they value religion with respect to their future bliss rather than their present duty; and are therefore continually careless of its direct commands, with easy excuse to themselves for disobedience to them. Whereas the Norman, finding in his own heart an irresistible impulse to action, and perceiving himself to be set, with entirely strong body, brain, and will, in the midst of a weak and dissolute confusion of all things, takes from the Bible instantly into his conscience every exhortation to Do and to Govern; and becomes, with all his might and understanding, a blunt and rough servant, knecht, or knight of God, liable to much misapprehension, of course, as to the services immediately required of him, but supposing, since the whole make of him, outside and in, is a soldier's, that God meant him for a soldier, and that he is to establish, by main force, the Christian faith and works all over the world so far as he comprehends them; not merely with the Mahometan indignation against spiritual error, but with a sound and honest soul's dislike of material error, and resolution to extinguish *that*, even if perchance found in the spiritual persons

to whom, in their office, he yet rendered total reverence. . . .

How far the existing British nation owes its military prowess to the blood of Normandy and Anjou, I have never examined its genealogy enough to tell you;*—but this I can tell you positively, that whatever constitutional order or personal valour the Normans enforced or taught among the nations they conquered, they did not at first attempt with their own hands to rival them in any of their finer arts, but used both Greek and Saxon sculptors, either as slaves, or hired workmen, and more or less therefore chilled and degraded the hearts of the men thus set to servile, or at best, hireling, labour.

In 1874, I went to see Etna, Scylla, Charybdis, and the tombs of the Norman Kings at Palermo; surprised, as you may imagine, to find that there wasn't a stroke nor a notion of Norman work in them. They are, every atom, done by Greeks, and are as pure Greek as the temple of Ægina; but more rich and refined. I drew with accurate care, and with measured profile of every moulding, the tomb built for Roger II. (afterwards

* But, so far as you have indeed the right to trust in the courage of your own hearts, remember also—it is not in Norman nor Saxon, but in Celtic race that your real strength lies. The battles both of Waterloo and Alma were won by Irish and Scots—by the terrible Scots Greys, and by Sir Colin's Highlanders. Your "thin red line" was kept steady at Alma only by Colonel Yea's swearing at them.

Frederick II. was laid in its dark porphyry). And it is a perfect type of the Greek-Christian form of tomb—temple over sarcophagus, in which the pediments rise gradually, as time goes on, into acute angles—get pierced in the gable with foils, and their sculptures thrown outside on their flanks, and become at last in the fourteenth century, the tombs of Verona. But what is the meaning of the Normans employing these Greek slaves for their work in Sicily (within thirty miles of the field of Himera)? Well, the main meaning is that though the Normans could build, they couldn't carve, and were wise enough not to try to, when they couldn't, as you do now all over this intensely comic and tragic town: but, here in England, they only employed the Saxon with a grudge, and therefore being more and more driven to use barren mouldings without sculpture, gradually developed the structural forms of archi-volt, which breaking into the lancet, brighten and balance themselves into the symmetry of Early English Gothic.—*Pleasures of England*, III.

14. CAMPOSANTO OF PISA.—How do you think such a field becomes holy,—how separated, as the resting-place of loving kindred, from that other field of blood, bought to bury *strangers* in?

When you have finally succeeded, by your gospel of mammon, in making all the men of your own nation not only strangers to each other,

but enemies; and when your every churchyard becomes therefore a field of the stranger, the kneeling hamlet will vainly drink the chalice of God in the midst of them. The field will be unholy. No cloisters of noble history can ever be built round such an one.

But the very earth of this at Pisa was holy, as you know. That "armata" of the Tuscan city brought home not only marble and ivory, for treasure; but earth,—a fleet's burden,—from the place where there was healing of soul's leprosy: and their field became a place of holy tombs, prepared for its office with earth from the land made holy by one tomb; which all the knight-hood of Christendom had been pouring out its life to win.

I told you just now that this sculpture of Niccola's was the beginning of Christian architecture. How do you judge that Christian architecture in the deepest meaning of it to differ from all other?

All other noble architecture is for the glory of living gods and men: but this is for the glory of death, in God and man. Cathedral, cloister, or tomb,—shrine for the body of Christ, or for the bodies of the saints. All alike signifying death to this world; life, other than of this world.

Observe, I am not saying how far this feeling, be it faith, or be it imagination, is true or

false ;—I only desire you to note that the power of all Christian work begins in the niche of the catacomb and depth of the sarcophagus, and is to the end definable as architecture of the tomb.

Not altogether, and under every condition, sanctioned in doing such honour to the dead by the Master of it. Not every grave is by His command to be worshipped. Graves there may be—too little guarded, yet dishonourable ; —“*ye* are as graves that appear not, and the men that walk over them are not aware of them.” And graves too much guarded, yet dishonourable, “which indeed appear beautiful outwardly, but are within full of all uncleanness.” Or graves, themselves honourable, yet which it may be, in us, a crime to adorn. “For they indeed killed them, and *ye* build their sepulchres.”

Questions, these, collateral ; or to be examined in due time ; for the present it is enough for us to know that all Christian architecture, as such, has been hitherto essentially of tombs.

It has been thought, gentlemen, that there is a fine Gothic revival in your streets of Oxford, because you have a Gothic door to your County Bank :

Remember, at all events, it was other kind of buried treasure, and bearing other interest, which Niccola Pisano's Gothic was set to guard. —*V. d' A.*, I., § 27-30.

15. TOMB OF GALILEO GALILEI, IN STA. CROCE.—It is the crowning virtue of all great art that, however little is left of it by the injuries of time, that little will be lovely. As long as you can see anything, you can see—almost all;—so much the hand of the master will suggest of his soul.

And here you are well quit, for once, of restoration. No one cares for this sculpture; and if Florence would only thus put all her old sculpture and painting under her feet, and simply use them for gravestones and oilcloth, she would be more merciful to them than she is now. Here, at least, what little is left is true.

And, if you look long, you will find it is not so little. That worn face is still a perfect portrait of the old man, though like one struck out at a venture, with a few rough touches of a master's chisel. And that falling drapery of his cap is, in its few lines, faultless, and subtle beyond description.

And now, here is a simple but most useful test of your capacity for understanding Florentine sculpture or painting. If you can see that the lines of that cap are both right, and lovely; that the choice of the folds is exquisite in its ornamental relations of line; and that the softness and ease of them are complete,—though only sketched with a few dark touches,—then you can understand Giotto's drawing, and Botticelli's;—Donatello's carving, and Luca's. But if you see

nothing in *this* sculpture, you will see nothing in theirs, *of* theirs. Where they choose to imitate flesh, or silk, or to play any vulgar modern trick with marble—(and they often do)—whatever, in a word, is French, or American, or Cockney, in their work, you can see; but what is Florentine, and for ever great—unless you can see also the beauty of this old man in his citizen's cap,—you will see never.

There is more in this sculpture, however, than its simple portraiture and noble drapery. The old man lies on a piece of embroidered carpet; and, protected by the higher relief, many of the finer lines of this are almost uninjured; in particular, its exquisitely wrought fringe and tassels are nearly perfect. And if you will kneel down and look long at the tassels of the cushion under the head, and the way they fill the angles of the stone, you will—or may—know, from this example alone, what noble decorative sculpture is, and was, and must be, from the days of earliest Greece to those of latest Italy.

“Exquisitely sculptured fringe!” and you have just been abusing sculptors who play tricks with marble! Yes, and you cannot find a better example, in all the museums of Europe, of the work of a man who does *not* play tricks with it,—than this tomb. Try to understand the difference: it is a point of quite cardinal importance to all your future study of sculpture.

I *told* you, observe, that the old Galileo was lying on a piece of embroidered carpet. I don't think, if I had not told you, that you would have found it out for yourself. It is not so like a carpet as all that comes to.

But had it been a modern trick-sculpture, the moment you came to the tomb you would have said, "Dear me! how wonderfully that carpet is done,—it doesn't look like stone in the least,—one longs to take it up and beat it, to get the dust off."

Now whenever you feel inclined to speak so of a sculptured drapery, be assured, without more ado, the sculpture is base, and bad. You will merely waste your time and corrupt your taste by looking at it. Nothing is so easy as to imitate drapery in marble. You may cast a piece any day; and carve it with such subtlety that the marble shall be an absolute image of the folds. But that is not sculpture. That is mechanical manufacture.

No great sculptor, from the beginning of art to the end of it, has ever carved, or ever will, a deceptive drapery. He has neither time nor will to do it. His mason's lad may do that, if he likes. A man who can carve a limb or a face never finishes inferior parts, but either with a hasty or scornful chisel, or with such grave and strict selection of their lines as you know at once to be imaginative, not imitative.

But if, as in this case, he wants to oppose the simplicity of his central subject with a rich background,—a labyrinth of ornamental lines to relieve the severity of expressive ones,—he will carve you a carpet, or a tree, or a rose thicket, with their fringes and leaves and thorns, elaborated as richly as natural ones; but always for the sake of the ornamental form, never of the imitation; yet, seizing the natural character in the lines he gives, with twenty times the precision and clearness of sight that the mere imitator has. —*Mornings in Florence*, I.

16. THE BYZANTINES.—Foolish modern critics have seen nothing in the Byzantine school but a barbarism to be conquered and forgotten. But that school brought to the art-scholars of the thirteenth century, laws which had been serviceable to Phidias, and symbols which had been beautiful to Homer. And methods and habits of pictorial scholarship, which gave a refinement of manner to the work of the simplest craftsman, and became an education to the higher artists which no discipline of literature can now bestow, developed themselves in the effort to decipher, and the impulse to re-interpret, the Eleusinian divinity of Byzantine tradition.—*V. d'A.*, III., § 87.

17. THE EFFIGY OF ILARIA DI CARETTO.—This sculpture is central in every respect; being

the last Florentine work in which the proper form of the Etruscan tomb is preserved, and the first in which all right Christian sentiment respecting death is embodied. It is perfectly in classical tradition, and perfectly concession to the passions of existence submits to all the laws of the past, all the hopes of the future.

Now every work of the great expresses primarily, conquest not grievous, but absolute with the greatest of them, into

19. PERFECT ILLUMINATION is only writing made lovely; the moment it passes into picture-making it has lost its dignity and function. For pictures, small or great, if beautiful, ought not to be painted on leaves of books, to be worn with service; and pictures, small or great, not beautiful, should be painted nowhere. But to make writing *itself* beautiful,—to make the sweep even lovely,—is the true art of illumination; particularly wish you to note this, because continually that young girls who are tracing a single curve with steadiness of delineating any ornamental with correctness, think that work, tolerable in ordinary drawing, when it is employed for the texts; and thus they render all impossible, by protecting themselves under the shield of good as the right way of setting to work leaves first mistresses of the art fully; and then to apply that art to the ends of development to what-permanently to write.—*L. A.*,

20. NEITH AND ST. BARBARA (an allegory of Gothic architecture, told to children).—When I fell asleep, I thought I saw Neith and St. Barbara talking together.

DORA. But what had St. Barbara to do with it?

LECTURER. My dear, I am quite sure St. Barbara is the patroness of good architects: not St. Thomas, whatever the old builders thought. It might be very fine, according to the monks' notions, in St. Thomas, to give all his employer's money away to the poor: but breaches of contract are bad foundations; and I believe it was not he, but St. Barbara, who overlooked the work in all the buildings you and I care about. However that may be, it was certainly she whom I saw in my dream with Neith. Neith was sitting weaving, and I thought she looked sad, and threw her shuttle slowly, and St. Barbara was standing at her side, in a stiff little gown, all ins and outs, and angles; but so 'bright with embroidery that it dazzled me whenever she moved; the train of it was just like a heap of broken jewels, it was so stiff, and full of corners, and so many-coloured, and bright. Her hair fell over her shoulders in long delicate waves, from under a little three-pinnacled crown, like a tower. She was asking Neith about the laws of architecture in Egypt and Greece; and when Neith told her the measures of the Pyramids, St.

Barbara said she thought they would have been better three-cornered; and when Neith told her the measures of the Parthenon, St. Barbara said she thought it ought to have had two transepts. But she was pleased when Neith told her of the temple of the dew, and of the Caryan maidens bearing its frieze: and then she thought that perhaps Neith would like to hear what sort of temples she was building herself, in the French valleys, and on the crags of the Rhine. So she began gossiping, just as one of you might to an old lady: and certainly she talked in the sweetest way in the world to Neith; and explained to her all about crockets and pinnacles: and Neith sat, looking very grave; and always graver as St. Barbara went on; till at last, I'm sorry to say, St. Barbara lost her temper a little; and I was not surprised. For you can't think how provoking Neith looked, sitting there just like a statue of sandstone; only going on weaving, like a machine, and never quickening the cast of her shuttle; while St. Barbara was telling her so eagerly all about the most beautiful things, and chattering away, as fast as bells ring on Christmas Eve, till she saw that Neith didn't care; and then St. Barbara got as red as a rose, and stopped, just in time;—or I think she would really have said something naughty.

ISABEL. Oh, please, but didn't Neith say anything then?

L. Yes. She said, quite quietly, "It may be very pretty, my love; but it is all nonsense."

ISABEL. Oh dear, Oh dear! and then?

L. Well; then I was a little angry myself, and hoped St. Barbara would be quite angry; but she wasn't. She bit her lips first; and then gave a great sigh—such a wild, sweet sigh—and then she knelt down, and hid her face on Neith's knees. Then Neith smiled a little, and was moved.

ISABEL. Oh, I am so glad!

L. And she touched St. Barbara's forehead with a flower of white lotus; and St. Barbara sobbed once or twice, and then said: "If you could only see how beautiful it is, and how much it makes people feel what is good and lovely; and if you could only hear the children singing in the Lady chapels!" And Neith smiled,—but still sadly,—and said, "How do you know what I have seen or heard, my love? Do you think all those vaults and towers of yours have been built without me? There was not a pillar in your Giotto's Santa Maria del Fiore which I did not set true by my spearshaft as it rose. But this pinnacle and flame work which has set your little heart on fire is all vanity; and you will see what it will come to, and that soon; and none will grieve for it more than I. And then every one will disbelieve your pretty symbols and types. Men must be spoken simply to, my dear, if you would guide them kindly, and long."

But St. Barbara answered that "Indeed she thought every one liked her work," and that "the people of different towns were as eager about their cathedral towers as about their privileges or their markets;" and then she asked Neith to come and build something with her, wall against tower; and "see whether the people will be as pleased with your building as with mine." But Neith answered, "I will not contend with you, my dear. I strive not with those who love me; and for those who hate me, it is not well to strive with me, as weaver Arachne knows. And remember, child, that nothing is ever done beautifully which is done in rivalry; nor nobly which is done in pride."

Then St. Barbara hung her head quite down, and said she was very sorry she had been so foolish, and kissed Neith; and stood thinking a minute: and then her eyes got bright again, and she said, she would go directly and build a chapel with five windows in it, four for the four cardinal virtues, and one for humility, in the middle, bigger than the rest. And Neith very nearly laughed right out, I thought; certainly her beautiful lips lost all their sternness for an instant: then she said, "Well, love, build it, but do not put so many colours into your windows as you usually do; else no one will be able to see to read, inside; and when it is built, let a poor village priest consecrate it, and not an archbishop."

St. Barbara started a little, I thought, and turned as if to say something; but changed her mind, and gathered up her train and went out. And Neith bent herself again to her loom, in which she was weaving a web of strange dark colours, I thought; but perhaps it was only after the glittering of St. Barbara's embroidered train: and I tried to make out the figures in Neith's web, and confused myself among them, as one always does in dreams; and then the dream changed altogether. . . .

MARY. What a shame of you to have such a dream, after all you have told us about Gothic architecture!

L. If you have understood anything I ever told you about it, you know that no architecture was ever corrupted more miserably, or abolished more justly, by the accomplishment of its own follies.—*Eth. D.*, VIII.

21. ARCHITECTURES AND RELIGIONS.—In all my past work, my endeavour has been to show that good architecture is essentially religious—the production of a faithful and virtuous, not of an infidel and corrupted people. But in the course of doing this, I have had also to show that good architecture is not *ecclesiastical*. People are so apt to look upon religion as the business of the clergy, not their own, that the moment they hear of anything depending on

“religion,” they think it must also have depended on the priesthood ; and I have had to take what place was to be occupied between these two errors, and fight both, often with seeming contradiction. Good architecture is the work of good and believing men ; therefore, you say, at least some people say, “Good architecture must essentially have been the work of the clergy, not of the laity.” No—a thousand times no ; good architecture has always been the work of the commonalty, *not* of the clergy. What, you say, those glorious cathedrals—the pride of Europe—did their builders not form Gothic architecture ? No ; they corrupted Gothic architecture. Gothic was formed in the baron’s castle, and the burgher’s street. It was formed by the thoughts, and hands, and powers of labouring citizens and warrior kings. By the monk it was used as an instrument for the aid of his superstition : when that superstition became a beautiful madness, and the best hearts of Europe vainly dreamed and pined in the cloister, and vainly raged and perished in the crusade,—through that fury of perverted faith and wasted war, the Gothic rose also to its loveliest, most fantastic, and finally, most foolish dreams ; and in those dreams, was lost.

I hope, now, that there is no risk of your misunderstanding me when I come to the gist of what I want to say to-night ;—when I repeat,

that every great r
the result and ex
religion. You can
there—you must h

It is not the monopoly, --

is not the exponent of a theological dogma—it is not the hieroglyphic writing of an initiated priesthood; it is the manly language of a people inspired by resolute and common purpose, and rendering resolute and common fidelity to the legible laws of an undoubted God.

Now there have as yet been three distinct schools of European architecture. . . . Your Greek worshipped Wisdom, and built you the Parthenon—the Virgin's temple. The Mediæval worshipped Consolation, and built you Virgin temples also—but to our Lady of Salvation. Then the Revivalist worshipped beauty, of a sort, and built you Versailles and the Vatican. Now, lastly, will you tell me what *we* worship, and what *we* build?

You know we are speaking always of the real, active, continual, national worship; that by which men act, while they live; not that which they talk of, when they die. Now, we have, indeed, a nominal religion, to which we pay tithes of property and sevenths of time; but we have also a practical and earnest religion, to which we devote nine-tenths of our property, and six-sevenths of our time. And we dispute

a great deal about the nominal religion: but we are all unanimous about this practical one; of which I think you will admit that the ruling goddess may be best generally described as the "Goddess of Getting-on," or "Britannia of the Market." The Athenians had an "Athena Agoraia," or Athena of the Market; but she was a subordinate type of their goddess, while our Britannia Agoraia is the principal type of ours. And all your great architectural works are, of course, built to her. It is long since you built a great cathedral; and how you would laugh at me if I proposed building a cathedral on the top of one of these hills of yours, to make it an Acropolis! But your railroad mounds, vaster than the walls of Babylon; your railroad stations, vaster than the temple of Ephesus, and innumerable; your chimneys, how much more mighty and costly than cathedral spires! your harbour-piers; your warehouses; your exchanges!—all these are built to your great Goddess of "Getting-on;" and she has formed, and will continue to form, your architecture, as long as you worship her; and it is quite vain to ask me to tell you how to build to *her*; you know far better than I.—*C. W. O.*, II., § 66–73.

22. GIOTTO'S FRESCOES AT STA. CROCE.—It is a characteristic—(as far as I know, quite a universal one)—of the greatest masters, that they

never expect you to look at them ;—seem always rather surprised if you want to ; and not over-pleased. Tell them you are going to hang their picture at the upper end of the table at the next great City dinner, and that Mr. So and So will make a speech about it ; you produce no impression upon them whatever, or an unfavourable one. The chances are ten to one they send you the most rubbishy thing they can find in their lumber room. But send for one of them in a hurry, and tell him the rats have gnawed a nasty hole behind the parlour door, and you want it plastered and painted over ;—and he does you a masterpiece which the world will peep behind your door to look at for ever.

I have no time to tell you why this is so ; nor do I know why, altogether ; but so it is.

Giotto, then, is sent for, to paint this high chapel : I am not sure if he chose his own subjects from the life of St. Francis : I think so,—but of course can't reason on the guess securely. At all events, he would have much of his own way in the matter.

Now you must observe that painting a Gothic chapel rightly is just the same thing as painting a Greek vase rightly. The chapel is merely the vase turned upside down, and outside-in. The principles of decoration are exactly the same. Your decoration is to be proportioned to the size of your vase ; to be together delightful when you

look at the cup, or chapel, as a whole; to be various and entertaining when you turn the cup round; (you turn *yourself* round in the chapel;) and to bend its heads and necks of figures about, as it best can, over the hollows, and ins and outs, so that anyhow, whether too long or too short—possible or impossible—they may be living, and full of grace. You will also please take it on my word to-day—in another morning walk you shall have proof of it—that Giotto was a pure Etruscan-Greek of the thirteenth century: converted indeed to worship St. Francis instead of Heracles; but as far as vase-painting goes, precisely the Etruscan he was before. This is nothing else than a large, beautiful, coloured Etruscan vase you have got, inverted over your heads like a diving-bell.

Accordingly, after the quatrefoil ornamentation of the top of the bell, you get two spaces at the sides under arches, very difficult to cramp one's picture into, if it is to be a picture only; but entirely provocative of our old Etruscan instinct of ornament. And, spurred by the difficulty, and pleased by the national character of it, we put our best work into these arches, utterly neglectful of the public below,—who will see the white and red and blue spaces, at any rate, which is all they will want to see, thinks Giotto, if he ever looks down from his scaffold.

Take the highest compartment, then, on the

left, looking towards the window. It was wholly impossible to get the arch filled with figures, unless they stood on each other's heads; so Giotto ckes it out with a piece of fine architecture. Raphael, in the *Sposalizio*, does the same, for pleasure.

Then he puts two dainty little white figures, bending, on each flank, to stop up his corners. But he puts the taller inside on the right, and outside on the left. And he puts his Greek chorus of observant and moralizing persons on each side of his main action.

Then he puts one Choragus—or leader of chorus, supporting the main action—on each side. Then he puts the main action in the middle—which is a quarrel about that white bone of contention in the centre. Choragus on the right, who sees that the bishop is going to have the best of it, backs him serenely. Choragus on the left, who sees that his impetuous friend is going to get the worst of it, is pulling him back, and trying to keep him quiet. The subject of the picture, which, after you are quite sure it is good as a decoration, but not till then, you may be allowed to understand, is the following. One of St. Francis's three great virtues being Obedience, he begins his spiritual life by quarrelling with his father. He, I suppose in modern terms I should say, "commercially invests" some of his father's goods in charity. His father objects to that investment; on which St. Francis runs away,

taking what he can find about the house along with him. His father follows to claim his property, but finds it is all gone, already: and that St. Francis has made friends with the Bishop of Assisi. His father flies into an indecent passion and declares he will disinherit him; on which St. Francis then and there takes all his clothes off, throws them frantically in his father's face, and says he has nothing more to do with clothes or father. The good Bishop, in tears of admiration, embraces St. Francis, and covers him with his own mantle.

I have read the picture to you as, if Mr. Spurgeon knew anything about art, Mr. Spurgeon would read it,—that is to say, from the plain, common sense, Protestant side. If you are content with that view of it, you may leave the chapel, and, as far as any study of history is concerned, Florence also; for you can never know anything either about Giotto, or her.

Yet do not be afraid of my re-reading it to you from the mystic, nonsensical, and Papistical side. I am going to read it to you—if after many and many a year of thought, I am able—as Giotto meant it; Giotto being, as far as we know, then the man of strongest brain and hand in Florence; the best friend of the best religious poet of the world; and widely differing, as his friend did also, in his views of the world, from either Mr. Spurgeon, or Pius IX.

The first duty of a child is to obey its father and mother ; as the first duty of a citizen is to obey the laws of his state. And this duty is so strict that I believe the only limits to it are those fixed by Isaac and Iphigenia. On the other hand, the father and mother have also a fixed duty to the child—not to provoke it to wrath. I have never heard this text explained to fathers and mothers from the pulpit, which is curious. For it appears to me that God will expect the parents to understand their duty to their children, better even than children can be expected to know their duty to their parents.

But farther. A *child's* duty is to obey its parents. It is never said anywhere in the Bible, and never was yet said in any good or wise book, that a man's, or woman's, is. *When*, precisely, a child becomes a man or a woman, it can no more be said, than when it should first stand on its legs. But a time assuredly comes when it should. In great states, children are always trying to remain children, and the parents wanting to make men and women of them. In vile states, the children are always wanting to be men and women, and the parents to keep them children. It may be—and happy the house in which it is so—that the father's at least equal intellect, and older experience, may remain to the end of his life a law to his children, not of force, but of perfect guidance, with perfect love. Rarely it is so ; not

often possible. It is as natural for the old to be prejudiced as for the young to be presumptuous ; and, in the change of centuries, each generation has something to judge of for itself.

But this scene, on which Giotto has dwelt with so great force, represents not the child's assertion of his independence, but his adoption of another Father.

You must not confuse the desire of this boy of Assisi to obey God rather than man, with the desire of our young cockney Hopeful to have a latch-key, and a separate allowance. No point of duty has been more miserably warped and perverted by false priests, in all churches, than this duty of the young to choose whom they will serve. But the duty itself does not the less exist ; and if there be any truth in Christianity at all, there will come, for all true disciples, a time when they have to take that saying to heart, "He that loveth father or mother more than me, is not worthy of me."—*Mornings in Florence*, III.

23. CARPACCIO'S ST. URSULA.—Carpaccio has taken much pains to explain to us, as far as he can, the kind of life she leads, by completely painting her little bedroom in the light of dawn, so that you can see everything in it. It is lighted by two doubly-arched windows, the arches being painted crimson round their edges, and the

capitals of the shafts that bear them, gilded. They are filled at the top with small round panes of glass; but beneath, are open to the blue morning sky, with a low lattice across them: and in the one at the back of the room are set two beautiful white Greek vases with a plant in each; one having rich dark and pointed green leaves, the other crimson flowers, each at the end of a branch like a spray of heath.

These flowerpots stand on a shelf which runs all round the room, and beneath the window, at about the height of the elbow, and serves to put things on anywhere: beneath it, down to the floor, the walls are covered with green cloth; but above, are bare and white. The second window is nearly opposite the bed, and in front of it is the princess's reading table, some two feet and a half square, covered by a red cloth with a white border and dainty fringe; and beside it her seat, not at all like a reading chair in Oxford, but a very small three-legged stool like a music-stool, covered with crimson cloth. On the table are a book set up at a slope fittest for reading, and an hour-glass. Under the shelf, near the table, so as to be easily reached by the outstretched arm, is a press full of books. The door of this has been left open, and the books, I am grieved to say, are rather in disorder, having been pulled about before the princess went to bed, and one left standing on its side.

Opposite this window, on the white wall, is a small shrine or picture (I can't see which, for it is in sharp retiring perspective), with a lamp before it, and a silver vessel hung from the lamp, looking like one for holding incense.

The bed is a broad four-poster, the posts being beautifully wrought golden or gilded rods, variously wreathed and branched, carrying a canopy of warm red. The princess's shield is at the head of it, and the feet are raised entirely above the floor of the room, on a dais which projects at the lower end so as to form a seat, on which the child has laid her crown. Her little blue slippers lie at the side of the bed,—her white dog beside them. The coverlid is scarlet, the white sheet folded half way back over it; the young girl lies straight, bending neither at waist nor knee, the sheet rising and falling over her in a narrow unbroken wave, like the shape of the coverlid of the last sleep, when the turf scarcely rises. Her head is turned towards us on the pillow, the cheek resting on her hand, as if she were thinking, yet utterly calm in sleep, and almost colourless. Her hair is tied with a narrow riband, and divided into two wreaths, which encircle her head like a double crown. The white night-gown hides the arm raised on the pillow, down to the wrist. At the door of the room an angel enters; (the little dog, though lying awake, vigilant, takes no notice). —*F. C.*, Letter 20.

"The Angel of the Lord," says the legend. What!—thinks Carpaccio;—to this little maid of fifteen, the angel that came to Moses and Joshua? Not so, but her own guardian angel.

Guardian, and to tell her that God will guide her heart to-morrow, and put His own answer on her lips, concerning her marriage. Shall not such angel be crowned with light, and strew her chamber with lilies?

There is no glory round his head; there is no gold on his robes; they are of subdued purple and gray. His wings are colourless—his face calm, but sorrowful,—wholly in shade. In his right hand he bears the martyr's palm; in his left, the fillet borne by the Greek angels of victory, and, together with it, gathers up, knotted in his hand, the folds of shroud with which the Etrurians veil the tomb.—*F. C.*, Letter 71.

24. LIPPI AND BOTTICELLI.—I will tell you what Lippi must have taught any boy whom he loved. First, humility, and to live in joy and peace, injuring no man—if such innocence might be. Nothing is so manifest in every face by him, as its gentleness and rest. Secondly, to finish his work perfectly, and in such temper that the angels might say of it—not he himself—"Iste perfecit opus." Do you remember what I told you in the Eagle's Nest,* that true humility

[* See § 4 of this volume.]

was in hoping that angels might sometimes admire *our* work ; not in hoping that we should ever be able to admire *theirs* ? Thirdly,—a little thing it seems, but was a great one,—love of flowers. No one draws such lilies or such daisies as Lippi. Botticelli beat him afterwards in roses, but never in lilies. Fourthly, due honour for classical tradition. Lippi is the only religious painter who dresses John Baptist in the camelskin, as the Greeks dressed Heracles in the lion's—over the head. Lastly, and chiefly of all,—Le Père Hyacinthe* taught his pupil certain views about the doctrine of the Church, which the boy thought of more deeply than his tutor, and that by a great deal ; and Master Sandro presently got himself into such question for painting heresy, that if he had been as hot-headed as he was true-hearted, he would soon have come to bad end by the tar-barrel. But he is so sweet and so modest, that nobody is frightened ; so clever, that everybody is pleased : and at last, actually the Pope sends for him to paint his own private chapel,—where the first thing my young gentleman does, mind you, is to paint the devil in a monk's dress, tempting

* The world was not then ready for Le Père Hyacinthe ;—but the real gist of the matter is that Lippi did, openly and bravely, what the highest prelates in the Church did basely and in secret ; also he loved, where they only lusted ; and he has been proclaimed therefore by them—and too foolishly believed by us—to have been a shameful person.

Christ! The sauciest thing, out and out, done in the history of the Reformation, it seems to me; yet so wisely done, and with such true respect otherwise shown for what was sacred in the Church, that the Pope didn't mind: and all went on as merrily as marriage bells.—*A. F.*, VI., § 189.

25.—SUPERSTITION AND RELIGION IN ART.
—I am no Puritan, and have never praised or advocated puritanical art. The two pictures which I would last part with out of our National Gallery, if there were question of parting with any, would be Titian's Bacchus and Correggio's Venus. But the noble naturalism of these was the fruit of ages of previous courage, continence, and religion—it was the fulness of passion in the life of a Britomart. But the mid-age and old age of nations is not like the mid-age or old age of noble women. National decrepitude must be criminal. National death can only be by disease, and yet it is almost impossible, out of the history of the art of nations, to elicit the true conditions relating to its decline in any demonstrable manner. The history of Italian art is that of a struggle between superstition and naturalism on one side, between continence and sensuality on another. So far as naturalism prevailed over superstition, there is always progress; so far as sensuality over chastity, death.

And the two contests are simultaneous. It is impossible to distinguish one victory from the other. Observe, however, I say victory over superstition, not over religion. Let me carefully define the difference. Superstition, in all times and among all nations, is the fear of a spirit whose passions are those of a man, whose acts are the acts of a man; who is present in some places, not in others; who makes some places holy and not others; who is kind to one person, unkind to another; who is pleased or angry according to the degree of attention you pay to him, or praise you refuse to him; who is hostile generally to human pleasure, but may be bribed by sacrifice of a part of that pleasure into permitting the rest. This, whatever form of faith it colours, is the essence of superstition. And religion is the belief in a Spirit whose mercies are over all His works—who is kind even to the unthankful and the evil; who is everywhere present, and therefore is in no place to be sought, and in no place to be evaded; to whom all creatures, times, and things are everlastingly holy, and who claims—not tithes of wealth, nor sevenths of days—but all the wealth that we have, and all the days that we live, and all the beings that we are, but who claims that totality because He delights only in the delight of His creatures; and because, therefore, the one duty that they owe to Him, and the only service they

can render Him, is to be happy. A Spirit, therefore, whose eternal benevolence cannot be angered, cannot be appeased; whose laws are everlasting and inexorable, so that heaven and earth must indeed pass away if one jot of them failed: laws which attach to every wrong and error a measured, inevitable penalty; to every rightness and prudence, an assured reward; penalty of which the remittance cannot be purchased; and reward, of which the promise cannot be broken.

And thus, in the history of art, we ought continually to endeavour to distinguish (while, except in broadest lights, it is impossible to distinguish) the work of religion from that of superstition, and the work of reason from that of infidelity. Religion devotes the artist, hand and mind, to the service of the gods; superstition makes him the slave of ecclesiastical pride, or forbids his work altogether, in terror or disdain. Religion perfects the form of the divine statue, superstition distorts it into ghastly grotesque. Religion contemplates the gods as the lords of healing and life, surrounds them with glory of affectionate service, and festivity of pure human beauty. Superstition contemplates its idols as lords of death, appeases them with blood, and vows itself to them in torture and solitude. Religion proselytes by love, superstition by war; religion teaches by example, superstition

by persecution. Religion gave granite shrine to the Egyptian, golden temple to the Jew, sculptured corridor to the Greek, pillared aisle and frescoed wall to the Christian. Superstition made idols of the splendours by which Religion had spoken: revered pictures and stones, instead of truths; letters and laws, instead of acts, and for ever, in various madness of fantastic desolation, kneels in the temple while it crucifies the Christ.

On the other hand, to reason resisting superstition, we owe the entire compass of modern energies and sciences; the healthy laws of life, and the possibilities of future progress. But to infidelity resisting religion (or which is often the case, taking the mask of it), we owe sensuality, cruelty, and war, insolence and avarice, modern political economy, life by conservation of forces, and salvation by every man's looking after his own interests; and, generally, whatsoever of guilt, and folly, and death, there is abroad among us. And of the two, a thousand-fold rather let us retain some colour of superstition, so that we may keep also some strength of religion, than comfort ourselves with colour of reason for the desolation of godlessness. I would say to every youth who entered our schools—Be a Mahometan, a Diana-worshipper, a Fire-worshipper, Root-worshipper, if you will; but at least be so much a man as to know what

worship means. I had rather, a million-fold rather, see you one of those "quibus hæc nascuntur in hortis numina," than one of those "quibus hæc *non* nascuntur in cordibus lumina;" and who are, by everlasting orphanage, divided from the Father of Spirits, who is also the Father of lights, from whom cometh every good and perfect gift.—*Study of Architecture* (O. R., I., § 283–285).

26. INSPIRATION IN ART.—What ground have we for thinking that art has ever been inspired as a message or revelation? What internal evidence is there in the work of great artists of their having been under the authoritative guidance of supernatural powers?

It is true that the answer to so mysterious a question cannot rest alone upon internal evidence; but it is well that you should know what might, from that evidence alone, be concluded. And the more impartially you examine the phenomena of imagination, the more firmly you will be led to conclude that they are the result of the influence of the common and vital, but not, therefore, less Divine, spirit, of which some portion is given to all living creatures in such manner as may be adapted to their rank in creation; and that everything which men rightly accomplish is indeed done by Divine help, but under a consistent law which is never departed from.

The strength of this spiritual life within us may be increased or lessened by our own conduct; it varies from time to time, as physical strength varies; it is summoned on different occasions by our will, and dejected by our distress, or our sin; but it is always *equally human*, and *equally Divine*. We are men; and not mere animals, because a special form of it is with us always; we are nobler and baser men, as it is with us more or less; but it is never given to us in any degree which can make us more than men.

Observe:—I give you this general statement doubtfully, and only as that towards which an impartial reasoner will, I think, be inclined by existing data. But I shall be able to show you, without any doubt, in the course of our studies, that the achievements of art which have been usually looked upon as the results of peculiar inspiration have been arrived at only through long courses of wisely directed labour, and under the influence of feelings which are common to all humanity.

But of these feelings and powers which in different degrees are common to humanity, you are to note that there are three principal divisions: first, the instincts of construction or melody, which we share with lower animals, and which are in us as native as the instinct of the bee or nightingale; secondly, the faculty of vision, or of

dreaming, whether in sleep or in conscious trance, or by voluntarily exerted fancy; and lastly, the power of rational inference and collection, of both the laws and forms of beauty.

Now the faculty of vision, being closely associated with the innermost spiritual nature, is the one which has by most reasoners been held for the peculiar channel of Divine teaching: and it is a fact that great part of purely didactic art has been the record, whether in language, or by linear representation, of actual vision involuntarily received at the moment, though cast on a mental retina blanched by the past course of faithful life. But it is also true that these visions, where most distinctly received, are always—I speak deliberately—*always*, the *sign of some mental limitation or derangement*; and that the persons who most clearly recognise their value, exaggeratedly estimate it, choosing what they find to be useful, and calling that “inspired,” and disregarding what they perceive to be useless, though presented to the visionary by an equal authority.

Thus it is probable that no work of art has been more widely didactic than Albert Durer’s engraving, known as the “Knight and Death.” But that is only one of a series of works representing similarly vivid dreams, of which some are uninteresting, except for the manner of their representation, as the “St. Hubert,” and others

are unintelligible ; some, frightful, and wholly unprofitable ; so that we find the visionary faculty in that great painter, when accurately examined, to be a morbid influence, abasing his skill more frequently than encouraging it, and sacrificing the greater part of his energies upon vain subjects, two only being produced, in the course of a long life, which are of high didactic value, and both of these capable only of giving sad courage. Whatever the value of these two, it bears more the aspect of a treasure obtained at great cost of suffering, than of a directly granted gift from heaven.

On the contrary, not only the highest, but the most consistent results have been attained in art by men in whom the faculty of vision, however strong, was subordinate to that of deliberative design, and tranquillised by a measured, continual, not feverish, but affectionate, observance of the quite unvisionary facts of the surrounding world.

And so far as we can trace the connection of their powers with the moral character of their lives, we shall find that the best art is the work of good, but of not distinctively religious men, who, at least, are conscious of no inspiration, and often so unconscious of their superiority to others, that one of the greatest of them, Reynolds, deceived by his modesty, has asserted that "all things are possible to well-directed labour."—*A. E.*, II., § 44-48.

27. JOHN BELLINI.—The art of Bellini is centrally represented by two pictures at Venice : one, the Madonna in the Sacristy of the Frari, with two saints beside her, and two angels at her feet ; the second, the Madonna with four Saints, over the second altar of San Zaccaria.

In the first of these, the figures are under life size, and it represents the most perfect kind of picture for rooms ; in which, since it is intended to be seen close to the spectator, every right kind of finish possible to the hand may be wisely lavished ; yet which is not a miniature, nor in any wise petty, or ignoble.

In the second, the figures are of life size, or a little more, and it represents the class of great pictures in which the boldest execution is used, but all brought to entire completion. These two, having every quality in balance, are as far as my present knowledge extends, and as far as I can trust my judgment, the two best pictures in the world.

Observe respecting them—

First, they are both wrought in entirely consistent and permanent material. The gold in them is represented by painting, not laid on with real gold. And the painting is so secure, that four hundred years have produced on it, so far as I can see, no harmful change whatsoever, of any kind.

Secondly, the figures in both are in perfect

peace. No action takes place except that the little angels are playing on musical instruments, but with uninterrupted and effortless gesture, as in a dream. A choir of singing angels by La Robbia or Donatello would be intent on their music, or eagerly rapturous in it, as in temporary exertion : in the little choirs of cherubs by Luini in the Adoration of the Shepherds, in the Cathedral of Como, we even feel by their dutiful anxiety that there might be danger of a false note if they were less attentive. But Bellini's angels, even the youngest, sing as calmly as the Fates weave.

Let me at once point out to you that this calmness is the attribute of the entirely highest class of art : the introduction of strong or violently emotional incident is at once a confession of inferiority.

Those are the two first attributes of the best art. Faultless workmanship, and perfect serenity ; a continuous, not momentary, action,—or entire inaction. You are to be interested in the living creatures ; not in what is happening to them.

Then the third attribute of the best art is that it compels you to think of the spirit of the creature, and therefore of its face, more than of its body.

And the fourth is that in the face, you shall be led to see only beauty or joy ;—never vileness, vice, or pain.—*A. P.*, VII., § 218–220.

28. COLOURISTS AND CHIAROSCURISTS.—In their early days, the colourists are separated from

other schools by their contentment with tranquil cheerfulness of light ; by their never wanting to be dazzled. None of their lights are flashing or blinding ; they are soft, winning, precious ; lights of pearl, not of lime : only, you know, on this condition they cannot have sunshine : their day is the day of Paradise ; they need no candle, neither light of the sun, in their cities ; and everything is seen clear, as through crystal, far or near.

This holds to the end of the fifteenth century. Then they begin to see that this, beautiful as it may be, is still a make-believe light ; that we do not live in the inside of a pearl ; but in an atmosphere through which a burning sun shines thwartedly, and over which a sorrowful night must far prevail. And then the chiaroscurists succeed in persuading them of the fact that there is a mystery in the day as in the night, and show them how constantly to see truly, is to see dimly. And also they teach them the brilliancy of light, and the degree in which it is raised from the darkness ; and instead of their sweet and pearly peace, tempt them to look for the strength of flame and coruscation of lightning, and flash of sunshine on armour and on points of spears.

The noble painters take the lesson nobly, alike for gloom or flame. Titian with deliberate strength, Tintoret with stormy passion, read it, side by side. Titian deepens the hues of his Assumption, as of his Entombment, into a solemn twilight ;

Tintoret involves his earth in coils of volcanic cloud, and withdraws, through circle flaming above circle, the distant light of Paradise. Both of them, becoming naturalist and human, add the veracity of Holbein's intense portraiture to the glow and dignity they had themselves inherited from the Masters of Peace: at the same moment another, as strong as they, and in pure felicity of art faculty even greater than they, but trained in a lower school,—Velasquez,—produced the miracles of colour and shadow-painting, which made Reynolds say of him, "What we all do with labour, he does with ease;" and one more, Correggio, uniting the sensual element of the Greek schools with their gloom, and their light with their beauty, and all these with the Lombardic colour, became, as since I think it has been admitted without question, the captain of the painter's art as such. Other men have nobler or more numerous gifts, but as a painter, master of the art of laying colour so as to be lovely, Correggio is alone.

I said the noble men learned their lesson nobly. The base men also, and necessarily, learn it basely. The great men rise from colour to sunlight. The base ones fall from colour to candlelight. To-day, "*non ragioniam di lor*," but let us see what this great change which perfects the art of painting mainly consists in, and means. For though we are only at present

speaking of technical matters, every one of them, I can scarcely too often repeat, is the outcome and sign of a mental character, and you can only understand the folds of the veil, by those of the form it veils.

The complete painters, we find, have brought dimness and mystery into their method of colouring. That means that the world all round them has resolved to dream, or to believe, no more; but to know, and to see. And instantly all knowledge and sight are given, no more as in the Gothic times, through a window of glass, brightly, but as through a telescope-glass, darkly. Your cathedral window shut you from the true sky, and illumined you with a vision; your telescope leads you to the sky, but darkens its light, and reveals nebula beyond nebula, far and farther, and to no conceivable farthest—unresolvable. That is what the mystery means.

Next, what does that Greek opposition of black and white mean?

In the sweet crystalline time of colour, the painters, whether on glass or canvas, employed intricate patterns, in order to mingle hues beautifully with each other, and make one perfect melody of them all. But in the great naturalist school, they like their patterns to come in the Greek way, dashed dark on light,—gleaming light out of dark. That means also that the world round them has again returned to the

Greek conviction, that all nature, especially human nature, is not entirely melodious nor luminous; but a barred and broken thing: that saints have their foibles, sinners their forces; that the most luminous virtue is often only a flash, and the blackest-looking fault is sometimes only a stain: and, without confusing in the least black with white, they can forgive, or even take delight in things that are like the *νεβρίς*, dappled.

You have then—first, mystery. Secondly, opposition of dark and light. Then, lastly, whatever truth of form the dark and light can show.

That is to say, truth altogether, and resignation to it, and quiet resolve to make the best of it. And therefore portraiture of living men, women, and children,—no more of saints, cherubs, or demons. So here I have brought for your standards of perfect art, a little maiden of the Strozzi family, with her dog, by Titian; and a little princess of the house of Savoy, by Vandyke; and Charles the Fifth, by Titian; and a queen, by Velasquez; and an English girl in a brocaded gown, by Reynolds; and an English physician in his plain coat, and wig, by Reynolds: and if you do not like them, I cannot help myself, for I can find nothing better for you.

Better?—I must pause at the word. Nothing stronger, certainly, nor so strong. Nothing so wonderful, so inimitable, so keen in unprejudiced and unbiassed sight.

Yet better, perhaps, the sight that was guided by a sacred will; the power that could be taught to weaker hands; the work that was faultless, though not inimitable, bright with felicity of heart, and consummate in a disciplined and companionable skill.—*L. A.*, VII., § 176–182.

29. HOLBEIN'S "DANCE OF DEATH."—There is no scene about which a shallow and feeble painter would have been more sure to adopt the commonplaces of the creed of his time than the death of a child,—chiefly, and most of all, the death of a country child,—a little thing fresh from the cottage and the field. Surely for such an one, angels will wait by its sick bed, and rejoice as they bear its soul away; and over its shroud flowers will be strewn, and the birds will sing by its grave. So your common sentimentalist would think, and paint. Holbein sees the facts, as they verily are, up to the point when vision ceases. He speaks, then, no more.

The country labourer's cottage—the rain coming through its roof, the clay crumbling from its partitions, the fire lighted with a few chips and sticks on a raised piece of the mud floor,—such dais as can be contrived, for use, not for honour. The damp wood sputters; the smoke, stopped by the roof, though the rain is not, coils round again, and down. But the mother can warm the child's supper of bread and milk so—holding the pan by

the long handle; and on mud floor though it be, they are happy,—she, and her child, and its brother,—if only they could be left so. They shall not be left so: the young thing must leave them—will never need milk warmed for it any more. It would fain stay,—sees no angels—feels only an icy grip on its hand, and that it cannot stay. Those who loved it shriek and tear their hair in vain, amazed in grief. “Oh, little one, must you lie out in the fields then, not even under this poor torn roof of thy mother’s to-night?”

Again: there was not in the old creed any subject more definitely and constantly insisted on than the death of a miser. He had been happy, the old preachers thought, till then: but his hour has come; and the black covetousness of hell is awake and watching; the sharp harpy claws will clutch his soul out of his mouth, and scatter his treasure for others. So the commonplace preacher and painter taught. Not so Holbein. The devil want to snatch his soul, indeed! Nay, he never *had* a soul, but of the devil’s giving. His misery to begin on his death-bed! Nay, he had never an unmiserable hour of life. The fiend is with him now,—a paltry, abortive fiend, with no breath even to blow hot with. He supplies the hell-blast *with a machine*. It is winter, and the rich man has his furred cloak and cap, thick and heavy; the beggar, bare-headed to beseech him, skin and rags hanging about him

together, touches his shoulder, but all in vain; there is other business in hand. More haggard than the beggar himself, wasted and palsied, the rich man counts with his fingers the gain of the years to come.

But of those years, infinite that are to be, Holbein says nothing. "I know not; I see not. This only I see, on this very winter's day, the low pale stumbling-block at your feet, the altogether by you unseen and forgotten Death. You shall not pass *him* by on the other side; here is a fasting figure in skin and bone, at last, that will stop you; and for all the hidden treasures of earth, here is your spade: dig now, and find them."—*A. F.*, V., § 175, 176.

30. A MADONNA BY DÜRER.—You think it very ugly. Well, so it is. Don't be afraid to think so, nor to say so. Frightfully ugly; vulgar also. It is the head, simply, of a fat Dutch girl, with all the pleasantness left out. There is not the least doubt about that. Don't let anybody force Albert Dürer down your throats; nor make you expect pretty things from him. Stothard's young girl in the swing, or Sir Joshua's Age of Innocence, is in quite angelic sphere of another world, compared to this black domain of poor, laborious Albert. We are not talking of female beauty, so please you, just now, gentlemen, but of engraving. And the merit, the classical,

indefeasible, immortal merit of this head of a Dutch girl with all the beauty left out, is in the fact that every line of it, as engraving, is as good as can be;—good, not with the mechanical dexterity of a watchmaker, but with the intellectual effort and sensitiveness of an artist who knows precisely what can be done, and ought to be attempted, with his assigned materials. He works easily, fearlessly, flexibly; the dots are not all measured in distance; the lines not all mathematically parallel or divergent. He has even missed his mark at the mouth in one place, and leaves the mistake, frankly. But there are no petrified mistakes; nor is the eye so accustomed to the look of the mechanical furrow as to accept it for final excellence. The engraving is full of the painter's higher power and wider perception; it is classically perfect, because duly subordinate, and presenting for your applause only the virtues proper to its own sphere. Among these, I must now reiterate, the first of all is the *decorative* arrangement of *lines*.

You all know what a pretty thing a damask tablecloth is, and how a pattern is brought out by threads running one way in one space, and across in another. So, in lace, a certain delightfulness is given by the texture of meshed lines.

Similarly, on any surface of metal, the object of the engraver is, or ought to be, to cover it

with lovely *lines*, forming a lacework, and including a variety of spaces, delicious to the eye.

And this is his business, primarily; before any other matter can be thought of, his work must be ornamental. You know I told you a sculptor's business is first to cover a surface with pleasant *bosses*, whether they mean anything or not; so an engraver's is to cover it with pleasant *lines*, whether they mean anything or not. That they should mean something, and a good deal of something, is indeed desirable afterwards; but first we must be ornamental.—*A. F.*, IV., § 125, 126.

31. THE ART OF ENGRAVING.—We will take, for example, the plate of Turner's "Mercury and Argus." I suppose most people, looking at such a plate, fancy it is produced by some simple mechanical artifice, which is to drawing only what printing is to writing. They conclude, at all events, that there is something complacent, sympathetic, and helpful in the nature of steel; so that while a pen-and-ink sketch may always be considered an achievement proving cleverness in the sketcher, a sketch on steel comes out by mere favour of the indulgent metal; or perhaps they think the plate is woven like a piece of pattern silk, and the pattern is developed by pasteboard cards punched full of holes? Not so. Look close at that engraving, imagine it to be a

drawing in pen and ink, and yourself required similarly to produce its parallel! True, the steel point has the one advantage of not blotting, but it has tenfold or twentyfold disadvantage, in that you cannot slur, nor efface, except in a very resolute and laborious way, nor play with it, nor even see what you are doing with it at the moment, far less the effect that is to be. You must *feel* what you are doing with it, and know precisely what you have got to do; how deep, how broad, how far apart your lines must be, etc. and etc., (a couple of lines of etceteras would not be enough to imply all you must know). But suppose the plate *were* only a pen drawing: take your pen—your finest—and just try to copy the leaves that entangle the head of Io, and her head itself; remembering always that the kind of work required here is mere child's play compared to that of fine figure engraving. Nevertheless, take a strong magnifying glass to this—count the dots and lines that gradate the nostrils and the edges of the facial bone; notice how the light is left on the top of the head by the stopping, at its outline, of the coarse touches which form the shadows under the leaves; examine it well, and then—I humbly ask of you—try to do a piece of it yourself! You clever sketcher—you young lady or gentleman of genius—you eye-glassed dilettante—you current writer of criticism royally plural,—I

beseech you,—do it yourself; do the mercy etched outline yourself, if no more. Look you,—you hold your etching needle this way, as you would a pencil, nearly; and then,—you scratch with it! it is as easy as lying. Or if you think that too difficult, take an easier piece;—take either of the light sprays of foliage that rise against the fortress on the right, pass your lens over them—look how their fine outline is first drawn, leaf by leaf; then how the distant rock is put in between, with broken lines, mostly stopping before they touch the leaf-outline; and again, I pray you, do it yourself,—if not on that scale, on a larger. Go on into the hollows of the distant rock,—traverse its thickets,—number its towers;—count how many lines there are in a laurel bush—in an arch—in a casement; some hundred and fifty, or two hundred, deliberately drawn lines, you will find, in every square quarter of an inch;—say *three thousand to the inch*,—each, with skilful intent, put in its place! and then consider what the ordinary sketcher's work must appear, to the men who have been trained to this!—*Cestus of Aglaia*, III. (*O. R.*, I., § 347).

32. EXECUTION IN PAINTING.—You will continually hear artists disputing about grounds, glazings, vehicles, varnishes, transparencies, opacities, oleaginousnesses. All that talk is as idle as the East wind. Get a flat surface that won't

crack,—some coloured substance that will stick upon it, and remain always of the colour it was when you put it on,—and a pig's bristle or two, wedged in a stick ; and if you can't paint, you are no painter ; and had better not talk about the art. The one thing you have to learn—the one power truly called that of “painting”—is to lay on any coloured substance, whatever its consistence may be, (from mortar to ether,) *at once*, of the exact tint you want, in the exact form you want, and in the exact quantity you want. *That* is painting.

Now you are well aware that to play on the violin well requires some practice. Painting is playing on a colour-violin, seventy-times-seven stringed, and inventing your tune as you play it ! That is the easy, simple, straightforward business you have to learn. Here is your catgut and your mahogany,—better or worse quality of both of course there may be,—Cremona tone, and so on, to be discussed with due care, in due time ;—you cannot paint miniature on the sail of a fishing-boat, nor do the fine work with hog's bristles that you can with camel's hair :—all these catgut and bristle questions shall have their place ; but the primary question of all is—*can* you *play* ?

Perfectly, you never can, but by birth-gift. The entirely first-rate musicians and painters are born, like Mercury ;—their words are music, and their touch is gold : sound and colour wait on them from their youth ; and no practice will ever

enable other human creatures to do anything like them. The most favourable conditions, the most docile and apt temper, and the unwearied practice of life, will never enable any painter of merely average human capacity to lay a single touch like Gainsborough, Velasquez, Tintoret, or Luini. But to understand that the matter must still depend on practice *as well* as on genius,—that painting is not one whit less, but more, difficult than playing on an instrument,—and that your care as a student, on the whole, is not to be given to the quality of your piano, but of your touch,—this is the great fact which I have to teach you respecting colour; this is the root of all excellent doing and perceiving.

And you will be utterly amazed, when once you begin to feel what colour means, to find how many qualities which appear to result from peculiar method and material do indeed depend only on loveliness of execution; and how divine the law of nature is, which has so connected the immortality of beauty with patience of industry, that by precision and rightness of laborious art you may at last literally command the rainbow to stay, and forbid the sun to set.—*L. F.*, VII., § 5-7.

33. CRAFTSMANSHIP.—The day's work of a man like Mantegna or Paul Veronese consists of an unfaltering, uninterrupted succession of movements of the hand more precise than those of the

finest fencer: the pencil leaving one point and arriving at another, not only with unerring precision at the extremity of the line, but with an unerring and yet varied course—sometimes over spaces a foot or more in extent—yet a course so determined everywhere, that either of these men could, and Veronese often does, draw a finished profile, or any other portion of the contour of the face, with one line, not afterwards changed. Try, first, to realise to yourselves the muscular precision of that action, and the intellectual strain of it; for the movement of a fencer is perfect in practised monotony; but the movement of the hand of a great painter is at every instant governed by a direct and new intention. Then imagine that muscular firmness and subtlety, and the instantaneously selective and ordinant energy of the brain, sustained all day long, not only without fatigue, but with a visible joy in the exertion, like that which an eagle seems to take in the wave of his wings; and this all life long, and through long life, not only without failure of power, but with visible increase of it, until the actually organic changes of old age. And then consider, so far as you know anything of physiology, what sort of an ethical state of body and mind that means! ethic through ages past! what fineness of race there must be to get it, what exquisite balance and symmetry of the vital powers! And then, finally, determine for yourselves whether a

manhood like that is consistent with any viciousness of soul, with any mean anxiety, any gnawing lust, any wretchedness of spite or remorse, any consciousness of rebellion against law of God or man, or any actual, though unconscious violation of even the least law to which obedience is essential for the glory of life and the pleasing of its Giver.

It is, of course, true that many of the strong masters had deep faults of character, but their faults always show in their work. It is true that some could not govern their passions; if so, they died young, or they painted ill when old. But the greater part of our misapprehension in the whole matter is from our not having well known who the great painters were, and taking delight in the petty skill that was bred in the fumes of the taverns of the North, instead of theirs who breathed empyreal air, sons of the morning, under the woods of Assisi and the crags of Cadore.—*L. A.*, III., § 71, 72.

34. ALL GREAT ART IS PRAISE.—The art of man is the expression of his rational and disciplined delight in the forms and laws of the creation of which he forms a part.

In all first definitions of very great things, there must be some obscurity and want of strictness; the attempt to make them too strict will only end in wider obscurity. We may indeed

express to our friend the rational and disciplined pleasure we have in a landscape, yet not be artists: but it is true, nevertheless, that all art is the skilful expression of such pleasure; not always, it may be, in a thing seen, but only in a law felt; yet still, examined accurately, always in the Creation, of which the creature forms a part; and not in itself merely. Thus a lamb at play, rejoicing in its own life only, is not an artist;—but the lamb's shepherd, carving the piece of timber which he lays for his door-lintel into beads, is expressing, however unconsciously, his pleasure in the laws of time, measure, and order, by which the earth moves, and the sun abides in heaven.

So far as reason governs, or discipline restrains, the art even of animals, it becomes human, in those virtues; but never, I believe, perfectly human, because it never, so far as I have seen, expresses even an unconscious delight in divine laws. A nightingale's song is indeed exquisitely divided; but only, it seems to me, as the ripples of a stream, by a law of which the waters and the bird are alike unconscious. The bird is conscious indeed of joy and love, which the waters are not;—but (thanks be to God,) joy and love are not Arts; nor are they limited to Humanity. But the love-song becomes Art, when, by reason and discipline, the singer has become conscious of the ravishment in its divisions to the lute.

Farther to complete the range of our definition, it is to be remembered that we express our delight in a beautiful and lovely thing no less by lament for its loss, than gladness in its presence; much art is therefore tragic and pensive; but all true art is praise.*

There is no exception to this great law, for even caricature is only artistic in conception of the beauty of which it exaggerates the absence. Caricature by persons who cannot conceive beauty, is monstrous in proportion to that dullness; and, even to the best artists, perseverance in the habit of it is fatal.

Fix, then, this in your mind as the guiding principle of all right practical labour, and source of all healthful life energy,—that your art is to be the praise of something that you love. It may be only the praise of a shell or a stone; it may be the praise of a hero; it may be the praise of God:—your rank as a living creature is determined by the height and breadth of your love; but, be you small or great, what healthy art is possible to you must be the expression of your true delight in a real thing, better than the art. You may think, perhaps, that a bird's nest by William Hunt is better than a real bird's nest.

* As soon as the artist forgets his function of praise in that of imitation, his art is lost. His business is to give, by any means, however imperfect, the idea of a beautiful thing; not, by any means, however perfect, the realisation of an ugly one

We indeed pay a large sum for the one, and scarcely care to look for, or save, the other. But it would be better for us that all the pictures in the world perished, than that the birds should cease to build nests.

And it is precisely in its expression of this inferiority, that the drawing itself becomes valuable. It is because a photograph cannot condemn itself, that it is worthless. The glory of a great picture is in its shame; and the charm of it, in speaking the pleasure of a great heart, that there is something better than picture. Also it speaks with the voices of many: the efforts of thousands dead, and their passions, are in the pictures of their children to-day. Not with the skill of an hour, nor of a life, nor of a century, but with the help of numberless souls, a beautiful thing must be done. And the obedience, and the understanding, and the pure natural passion, and the perseverance, *in secula seculorum*, as they must be given to produce a picture, so they must be recognised, that we may perceive one.—*L. F.*, I., § 1-6.

35. THE 'THEORY OF RESEMBLANCE.—All second-rate artists—(and remember, the second-rate ones are a loquacious multitude, while the great come only one or two in a century; and then, silently) all second-rate artists will tell you that the object of fine art is not resem-

blance, but some kind of abstraction more refined than reality. Put that out of your heads at once. The object of the great Resemblant Arts is, and always has been, to resemble; and to resemble as closely as possible. It is the function of a good portrait to set the man before you in habit as he lived, and I would we had a few more that did so. It is the function of a good landscape to set the scene before you in its reality; to make you, if it may be, think the clouds are flying, and the streams foaming. It is the function of the best sculptor—the true Dædalus—to make stillness look like breathing, and marble look like flesh.

And in all great times of art, this purpose is as naively expressed as it is steadily held. All the talk about abstraction belongs to periods of decadence. In living times, people see thing living that pleases them; and try to make it live for ever, or to make something as like it as possible, that will last for ever. They paint their statues, and inlay them with jewels, and set real crowns on them; when they finish, in their pictures, every thing is embroidered, and would fain, if they could, cover every leaf upon the trees. And the usual verbal expression of conscious success is, "they have made their work 'look real.'" . . .

But now we must go one step farther, and say that it is to produce what shall look like Nature to people who know what Nature is

like! You see this is at once a great restriction, as well as a great exaltation of our aim. Our business is not to deceive the simple; but to deceive the wise! Here, for instance, is a modern Italian print, representing, to the best of its power, St. Cecilia, in a brilliantly realistic manner. And the fault of the work is not in its earnest endeavour to show St. Cecilia in habit as she lived, but in that the effort could only be successful with persons unaware of the habit St. Cecilia lived in. And this condition of appeal only to the wise increases the difficulty of imitative resemblance so greatly, that, with only average skill or materials, we must surrender all hope of it, and be content with an imperfect representation, true as far as it reaches, such as to excite the imagination of a wise man to complete it; though falling very far short of what either he or we should otherwise be entitled to demand. For instance, here is a suggestion by Sir Joshua Reynolds, of the general appearance of a British Judge,—requiring the attention of a very wise beholder indeed to detect, or even at first to discover what it is.

Nevertheless, it is better art than the modern Italian St. Cecilia, because the artist, however little he may have done to represent his knowledge, does, indeed, know altogether what a Judge is like, and appeals only to the criticism of those who know also.

There must be, therefore, two degrees of truth to be looked for in the good graphic arts; one, the commonest, which, by any partial or imperfect sign, conveys to you an idea which you must complete for yourself; and the other, the finest, a representation so perfect as to leave you nothing to be farther accomplished by this independent exertion; but to give you the same feeling of possession and presence which you would experience from the natural object itself. For instance of the first, in this representation of a rainbow,* the artist has no hope that, by the black lines of engraving, he can deceive you into any belief of the rainbow's being there, but he gives indication enough of what he intends, to enable you to supply the rest of the idea yourself, providing always you know beforehand what a rainbow is like. But in this drawing of the falls of Terni,† the painter has strained his skill to the utmost to give an actually deceptive resemblance of the iris, dawning and fading among the foam. So far as he has not actually deceived you, it is not because he would not have done so if he could; but only because his colours and science have fallen short of his desire. They have fallen so little short, that, in a good light, you may all but believe the foam and the sunshine are drifting and changing among the rocks.

* In Dürer's "Melancholia."

† Turner's, in the Hakewill series.

And after looking a little while, you will begin to regret that they are not so : you will feel that, lovely as the drawing is, you would like far better to see the real place, and the goats skipping among the rocks, and the spray floating above the fall. And this is the true sign of the greatest art—to part voluntarily with its greatness ;—to make *itself* poor and unnoticed ; but so to exalt and set forth its theme, that you may be fain to see the theme instead of it. So that you have never enough admired a great workman's doing, till you have begun to despise it. The best homage that could be paid to the Athena of Phidias would be to desire rather to see the living goddess ; and the loveliest Madonnas of Christian art fall short of their due power, if they do not make their beholders sick at heart to see the living Virgin.—*A. P.*, IV., § 122–127.

36. A CAUTION TO REALISTS.—Much that I have endeavoured to teach on this subject has been gravely misunderstood, by both young painters and sculptors, especially by the latter. Because I am always urging them to imitate organic forms, they think, if they carve quantities of flowers and leaves, and copy them from the life, they have done all that is needed. But the difficulty is not to carve quantities of leaves. Anybody can do that. The difficulty is, never anywhere to have an *unnecessary* leaf.

From the Elgin marbles, down to the lightest tendril that curls round a capital in the thirteenth century, every piece of stone that has been touched by the hand of a master, becomes soft with under-life, not resembling nature merely in skin-texture, nor in fibres of leaf, or veins of flesh ; but in the broad, tender, unspeakably subtle undulation of its organic form.—*L. A.*, VI., § 166.

37. THE NECESSITY OF INVENTION IN ART.
—If you throw at random over a rod a piece of drapery of any material which will fall into graceful folds, you will get a series of sinuous folds in catenary curves ; and any given disposition of these will be nearly as agreeable as any other ; though, if you throw the stuff on the rod a thousand times, it will not fall twice alike.

But suppose, instead of a straight rod, you take a beautiful nude statue, and throw the piece of linen over that. You may encumber and conceal its form altogether ; you may entirely conceal portions of the limbs, and show others ; or you may leave indications, under the thin veil, of the contours which are hidden ; but in ninety-nine cases out of a hundred you will wish the drapery taken off again ; you will feel that the folds are in some sort discrepant and harmful, and eagerly snatch them away. However passive the material, however softly accommodated to the limbs, the wrinklins will always look foreign to the form,

like the drip of a heavy shower of rain falling off it, and will load themselves in the hollows uncomfortably. You will have to pull them about; to stretch them one way, loosen them in another, and supply the quantity of government which a living person would have given to the dress, before it becomes at all pleasing to you.

Doing your best, you will still not succeed to your mind, provided you have, indeed, a mind worth pleasing. No adjustment that you can make, on the quiet figure, will give any approximation to the look of drapery which has previously accommodated itself to the action which brought the figure into the position in which it stays. On a really living person, gracefully dressed, and who has paused from graceful motion, you will get, again and again, arrangements of fold which you can admire: but they will not remain to be copied, the first following movement alters all. If you had your photographic plate ready and could photograph—I don't know if it has been tried—girls, like waves, as they move, you would get what was indeed lovely; and yet, when you compared even such results with fine sculpture, you would see that there was something wanting;—that, in the deepest sense, *all* was yet wanting.

Yet this is the most that the plurality of artists can do, or think of doing. They draw the nude figure with careful anatomy; they put their model or their lay figure into the required position; they

arrange draperies on it to their mind, and paint them from the reality. All such work is absolutely valueless,—worse than valueless in the end of it, blinding us to the qualities of fine work. . . .

What is true respecting these simple forms of drapery is true of all other inorganic form. It must become organic under the artist's hand by his invention. As there must not be a fold in a vestment too few or too many, there must not, in noble landscape, be a fold in a mountain, too few or too many. As you will never get from real linen cloth, by copying it ever so faithfully, the drapery of a noble statue, so you will never get from real mountains, copy them never so faithfully, the forms of noble landscape. Anything more beautiful than the photographs of the Valley of Chamouni, now in your print-sellers' windows, cannot be conceived. For geographical and geological purposes they are worth anything; for art purposes, worth—a good deal less than zero. You may learn much from them, and will mislearn more. But in Turner's "Valley of Chamouni" the mountains have not a fold too much, nor too little. There are no such mountains at Chamouni: they are the ghosts of eternal mountains, such as have been, and shall be, for evermore.—*E. N.*, VII., § 141-147.

38. ART AND ANATOMY.—It may be disputable whether in order to draw a living Madonna,

one needs to know how many ribs she has ; but it would have seemed indisputable that in order to draw a skeleton, one must know how many ribs *it* has.

Holbein is par excellence the draughtsman of skeletons. His painted Dance of Death was, and his engraved Dance of Death is, principal of such things, without any comparison or denial. He draws skeleton after skeleton, in every possible gesture ; but never so much as counts their ribs ! He neither knows nor cares how many ribs a skeleton has. There are always enough to rattle.

Monstrous, you think, in impudence,—Holbein for his carelessness, and I for defending him ! Nay, I triumph in him ; nothing has ever more pleased me than this grand negligence. Nobody wants to know how many ribs a skeleton has, any more than how many bars a gridiron has, so long as the one can breathe, and the other broil ; and still less, when the breath and the fire are both out.

But is it only of the bones, think you, that Holbein is careless ? Nay, incredible though it may seem to you,—but, to me, explanatory at once of much of his excellence,—he did not know anatomy at all ! I told you Holbein studies the face first, the body secondarily ; but I had no idea, myself, how completely he had refused the venomous science of his day. I showed you a

dead Christ of his, long ago. Can you match it with your academy drawings, think you? And yet he did not, and would not, know anatomy. *He* would not; but Dürer would, and did:—went hotly into it—wrote books upon it, and upon “proportions of the human body,” etc., etc., and all your modern recipes for painting flesh. How did his studies prosper his art?

People are always talking of his Knight and Death, and his Melancholia, as if those were his principal works. They are his characteristic ones, and show what he might have been *without* his anatomy; but they were mere byeplay compared to his Greater Fortune, and Adam and Eve. Look at these. Here is his full energy displayed; here are both male and female forms drawn with perfect knowledge of their bones and muscles, and modes of action and digestion,—and I hope you are pleased.

But it is not anatomy only that Master Albert studies. He has a taste for optics also; and knows all about refraction and reflection. What with his knowledge of the skull inside, and the vitreous lens outside, if any man in the world is to draw an eye, here's the man to do it, surely! With a hand which can give lessons to John Bellini, and a care which would fain do all so that it can't be done better, and acquaintance with every crack in the cranium, and every humour in the lens,—if we can't draw an eye,

we should just like to know who can! thinks Albert.

So having to engrave the portrait of Melanchthon, instead of looking at Melanchthon as ignorant Holbein would have been obliged to do,—wise Albert looks at the room window; and finds it has four cross-bars in it, and knows scientifically that the light on Melanchthon's eye must be a reflection of the window with its four bars—and engraves it so, accordingly; and who shall dare to say, now, it isn't like Melanchthon?

Unfortunately, however, it isn't, nor like any other person in his senses; but like a madman looking at somebody who disputes his hobby. While in this drawing of Holbein's, where a dim gray shadow leaves a mere crumb of white paper,—accidentally it seems, for all the fine scientific reflection,—behold, it is an eye indeed, and of a noble creature.

What is the reason? do you ask me; and is all the common teaching about generalisation of details true, then?

No; not a syllable of it is true. Holbein is right, not because he draws more generally, but more truly, than Dürer. Dürer draws what he knows is there; but Holbein, only what he sees. And, as I have told you often before, the really scientific artist is he who not only asserts bravely what he *does* see, but confesses honestly what he does *not*. You must not draw all the hairs in an

eyelash; not because it is sublime to generalise them, but because it is impossible to see them. How many hairs there are, a sign painter or anatomist may count; but how few of them you can see, it is only the utmost masters, Carpaccio, Tintoret, Reynolds, and Velasquez, who count, or know.

Such was the effect, then, of his science upon Dürer's ideal of beauty, and skill in portraiture. What effect had it on the temper and quantity of his work, as compared with poor ignorant Holbein's! You have only three portraits, by Dürer, of the great men of his time, and those bad ones; while he toils his soul out to draw the hoofs of satyrs, the bristles of swine, and the distorted aspects of base women and vicious men.

What, on the contrary, has ignorant Holbein done for you? Shakespere and he divide between them, by word and look, the Story of England under Henry and Elizabeth.—*A. F.*, V., § 168–171.

39. OBSERVATION AND INFORMATION.—Turner, in his early life, was sometimes good-natured, and would show people what he was about. He was one day making a drawing of Plymouth harbour, with some ships at the distance of a mile or two, seen against the light. Having shown this drawing to a naval officer, the naval officer observed with surprise, and objected with

very justifiable indignation, that the ships of the line had no port-holes. "No," said Turner, "certainly not. If you will walk up to Mount Edgecumbe, and look at the ships against the sunset, you will find you can't see the port-holes." "Well, but," said the naval officer, still indignant, "you know the port-holes are there." "Yes," said Turner, "I know that well enough; but my business is to draw what I see, and not what I know is there."

Now, that is the law of all fine artistic work whatsoever; and, more than that, it is, on the whole, perilous to you, and undesirable, that you *should* know what is there. If, indeed, you have so perfectly disciplined your sight that it cannot be influenced by prejudice;—if you are sure that none of your knowledge of what is there will be allowed to assert itself; and that you can reflect the ship as simply as the sea beneath it does, though you may know it with the intelligence of a sailor,—then, indeed, you may allow yourself the pleasure, and what will sometimes be the safeguard from error, of learning what ships, or stars, or mountains, are in reality; but the ordinary powers of human perception are almost certain to be disturbed by the knowledge of the real nature of what they draw: and, until you are quite fearless of your faithfulness to the appearances of things, the less you know of their reality the better.

And it is precisely in this passive and naïve simplicity that art becomes, not only greatest in herself, but most useful to science. If she *knew* anything of what she was representing, she would exhibit that partial knowledge with complacency; and miss the points beside it, and beyond it. Two painters draw the same mountain; the one has got unluckily into his head some curiosity about glacier marking; and the other has a theory of cleavage. The one will scratch his mountain all over; the other split it to pieces; and both drawings will be equally useless for the purposes of honest science.—*E. N.*, VII., § 125-127.

40. ROSSETTI AND HOLMAN HUNT.—I may be permitted, in the reverence of sorrow, to speak first of my much loved friend, Gabriel Rossetti. But, in justice no less than in the kindness due to death, I believe his name should be placed first on the list of men, within my own range of knowledge, who have raised and changed the spirit of modern Art: raised, in absolute attainment; changed, in direction of temper. Rossetti added to the before accepted systems of colour in painting, one based on the principles of manuscript illumination, which permits his design to rival the most beautiful qualities of painted glass, without losing either the mystery or the dignity of light and shade. And he was, as I believe it

is now generally admitted, the chief intellectual force in the establishment of the modern romantic school in England.

Those who are acquainted with my former writings must be aware that I use the word "romantic" always in a noble sense; meaning the habit of regarding the external and real world as a singer of Romaunts would have regarded it in the middle ages, and as Scott, Burns, Byron, and Tennyson have regarded it in our own times. But, as Rossetti's colour was based on the former art of illumination, so his romance was based on traditions of earlier and more sacred origin than those which have inspired our highest modern romantic literature. That literature has in all cases remained strongest in dealing with contemporary fact. The genius of Tennyson is at its highest in the poems of "Maud," "In Memoriam," and the "Northern Farmer;" but that of Rossetti, as of his greatest disciple, is seen only when on pilgrimage in Palestine.

I trust that Mr. Holman Hunt will not think that in speaking of him as Rossetti's disciple I derogate from the respect due to his own noble and determined genius. In all living schools it chances often that the disciple is greater than his master; and it is always the first sign of a dominant and splendid intellect, that it knows of whom to learn. Rossetti's great poetical genius

justified my claiming for him total, and, I believe, earliest, originality in the sternly materialistic, though deeply reverent, veracity, with which alone, of all schools of painters, this brotherhood of Englishmen has conceived the circumstances of the life of Christ. And if I had to choose one picture which represented in purity and completeness this manner of their thought, it would be Rossetti's "Virgin in the House of St. John."

But when Holman Hunt, under such impressive influence, quitting virtually for ever the range of worldly subjects, to which belonged the pictures of Valentine and Sylvia, of Claudio and Isabel, and of the "Awakening Conscience," rose into the spiritual passion which first expressed itself in the "Light of the World," an instant and quite final difference was manifested between his method of conception, and that of his forerunner. To Rossetti, the Old and New Testaments were only the greatest poems he knew; and he painted scenes from them with no more actual belief in their relation to the present life and business of men than he gave also to the *Morte d'Arthur* and the *Vita Nuova*. But to Holman Hunt, the story of the New Testament, when once his mind entirely fastened on it, became what it was to an old Puritan, or an old Catholic of true blood,—not merely a Reality, not merely the greatest of Realities, but the only Reality. So that there is

nothing in the earth for him any more that does not speak of that;—there is no course of thought nor force of skill for him, but it springs from and ends in that.—*A. E.*, I.

41. E. BURNE-JONES.—The realistic school could only develop its complete force in representing persons, and could not happily rest in personifications. Nevertheless, we find one of the artists whose close friendship with Rossetti, and fellowship with other members of the Pre-Raphaelite brotherhood, have more or less identified his work with theirs, yet differing from them all diametrically in this, that his essential gift and habit of thought is *in* personification, and that,—for sharp and brief instance, had both Rossetti and he been set to illustrate the first chapter of Genesis, Rossetti would have painted either Adam or Eve—but Edward Burne-Jones, a Day of Creation.

And in this gift, he becomes a painter, neither of Divine History, nor of Divine Natural History, but of Mythology, accepted as such, and understood by its symbolic figures to represent only general truths, or abstract ideas.

And here I must at once pray you, as I have prayed you to remove all associations of falsehood from the word romance, so also to clear them out of your faith, when you begin the study of mythology. Never confuse a Myth with a lie,—nay, you

must even be cautious how far you even permit it to be called a fable. Take the frequentest and simplest of myths, for instance—that of Fortune and her wheel. Enid does not herself conceive, or in the least intend the hearers of her song to conceive, that there stands anywhere in the universe a real woman, turning an adamantine wheel whose revolutions have power over human destiny. She means only to assert, under that image, more clearly the law of Heaven's continual dealing with man,—“He hath put down the mighty from their seat, and hath exalted the humble and meek.”

But in the imagined symbol, or rather let me say, the visiting and visible dream, of this law, other ideas variously conducive to its clearness are gathered;—those of gradual and irresistible motion of rise and fall,—the *tide* of Fortune, as distinguished from instant change or catastrophe; those of the connection of the fates of men with each other, the yielding and occupation of high place, the alternately appointed and inevitable humiliation:—and the fastening, in the sight of the Ruler of Destiny, of all to the mighty axle which moves only as the axle of the world. These things are told or hinted to you, in the mythic picture, not with the impertinence and the narrowness of words, nor in any order compelling a monotonous succession of thought,—but each as you choose or chance to read it, to be rested in, or proceeded with, as you will.

Here then is the ground on which the Dramatic, or personal, and Mythic, or personifying, schools of our young painters, whether we find for them a general name or not, must be thought of as absolutely one—that, as the dramatic painters seek to show you the substantial truth of persons, so the mythic school seeks to teach you the spiritual truth of myths.

Truth is the vital power of the entire school,—Truth its armour—Truth its war-word; and the grotesque and wild forms of imagination which, at first sight, seem to be the reaction of a desperate fancy, and a terrified faith, against the incisive scepticism of recent science, so far from being so, are part of that science itself: they are the results of infinitely more accurate scholarship, of infinitely more detective examination, of infinitely more just and scrupulous integrity of thought, than was possible to any artist during the two preceding centuries; and exactly as the eager and sympathetic passion of the dramatic designer now assures you of the way in which an event happened, so the scholarly and sympathetic thought of the mythic designer now assures you of the meaning, in what a fable said. . . .

And herein you see with what a deeply interesting function the modern painter of mythology is invested. He is to place, at the service of former imagination, the art which it had not—and to realise for us, with a truth then impossible, the

visions described by the wisest of men arising from their most pious thoughts and their most exalted doctrines: not indeed attempting any literal exactitude to follow the visionary, for no man can enter the mind of another, neither can any man refuse to obey the suggestion, only bringing the resources of his own mind to unveil the hidden splendour of the ideal, and showing us that the forms which appeared in fancy to the saints of antiquity, were indeed more beautiful than the black and red of the Greek vase, or the dogmatic outline of the Etruscan fresco.

It should be a ground of joy to us here in Oxford, that out of the ranks of the painter whose indefatigable and exhaustless fancy have together fulfilled a task, in a degree far distinguishing him from his contemporary European designers. It is impossible for the general public to estimate the quantity of careful and investigatory reading, and the fine tact of literary discrimination, which are signified by the command now possessed by Mr. Burne-Jones over the entire range both of Northern and Greek Mythology, or the tenderness at once, and largeness, of sympathy which have enabled him to harmonise these with the loveliest traditions of Christian legend. Hitherto, there has been

between the schools of classic and art, only in part conquered by the most skilled of artists and poets; Nicholas of Paphlagonia, indeed the technical aid of antiquity, such loss to his Christian sentiment; the imagery of Æschylus for the more fearful Hell to which, in common with the poets of his age, he condemned the world while Minos and the Furies punished him as still existent in Hades, in Paradise for Diana or Athena. The later revival of the legends of the East, the scorn of those of Christendom. It was not many years ago that the value of the Greek legends received and represented to us as the basis of our art, and it is only within the time of the Renaissance looked back to by the greater part of my younger auditors, that the Greek mythology, through Byzantine and Mohammedan Christian, has been first felt, and then accepted and proved, by the penetrative scholarship of the men belonging to this Pre-Raphaelite school, chiefly Mr. Burne-Jones and Mr. William Morris. —*A. E.*, II.

42. ENGLISH LANDSCAPE.—In the climates of Greece and Italy, the monotonous sunshine, burning away the deep colours of everything into white and gray, and wasting the strongest mountain-streams into threads among their shingle,

alternates with the blue-fiery thundercloud, with sheets of flooding rain, and volleying musquetry of hail. But throughout all the wild uplands of the former Saxon kingdom of Northumbria, from Edwin's crag to Hilda's cliff, the wreaths of softly resting mist, and wandering to and fro of capricious shadows of clouds, and drooping swathes, or flying fringes, of the benignant western rain, cherish, on every moorland summit, the deep-fibred moss,—embalm the myrtle,—gild the asphodel,—enchant along the valleys the wild grace of their woods, and the green elf land of their meadows; and passing away, or melting into the translucent calm of mountain air, leave to the open sunshine a world with every creature ready to rejoice in its comfort, and every rock and flower reflecting new loveliness to its light.

Perhaps among the confusedly miscellaneous examples of ancient and modern, tropic or arctic art, with which I have filled the niches of your schools, one, hitherto of the least noticeable or serviceable to you, has been the dark Copley Fielding drawing above the fireplace;—nor am I afraid of trusting your kindness with the confession, that it is placed there more in memory of my old master, than in the hope of its proving of any lively interest or use to you. But it is now some fifty years since it was brought in triumph to Herne Hill, being the first picture my father ever bought, and in so far the foundation of the

subsequent collection, some part of which has been permitted to become permanently national at Cambridge and Oxford. The pleasure which that single drawing gave on the morning of its installation in our home was greater than to the purchaser accustomed to these times of limitless demand and supply would be credible, or even conceivable;—and our back parlour for that day was as full of surprise and gratulation as ever Cimabue's joyful Borgo.

The drawing represents, as you will probably—not—remember, only a gleam of sunshine on a peaty moor, bringing out the tartan plaids of two Highland drovers, and relieved against the dark gray of a range of quite featureless and nameless distant mountains, seen through a soft curtain of rapidly drifting rain.

Some little time after we had acquired this unobtrusive treasure, one of my fellow students,—it was in my undergraduate days at Christ Church—came to Herne Hill to see what the picture might be which had afforded me so great ravishment. He had himself, as afterwards Kinglake and Curzon, been urged far by the thirst of oriental travel;—the chequer of plaid and bonnet had for him but feeble interest after having worn turban and capote; and the gray of Scottish hillside still less, to one who had climbed Olympus and Abarim. After gazing blankly for a minute or two at the cheerless district through which lay

the drovers' journey, he turned to me and said, "But, Ruskin, what is the use of painting such very bad weather?" And I had no answer, except that, for Copley Fielding and for me, there was no such thing as bad weather, but only different kinds of pleasant weather—some indeed inferring the exercise of a little courage and patience; but all, in every hour of it, exactly what was fittest and best, whether for the hills, the cattle, the drovers—or my master and me.

Be the case as it might,—and admitting that in a certain sense the weather *might* be bad in the eyes of a Greek or a Saracen,—there was no question that to us it was not only pleasant, but picturesque; and that we set ourselves to the painting of it, with as sincere desire to represent the—to our minds—beautiful aspect of a mountain shower, as ever Titian a blue sky, or Angelico a golden sphere of Paradise. Nay, in some sort, with a more perfect delight in the thing itself, and less colouring of it by our own thoughts or inventions. For that matter, neither Fielding, nor Robson, nor David Cox, nor Peter de Wint, nor any of this school, ever had much thought or invention to disturb them. They were, themselves, a kind of contemplative cattle, and flock of the field, who merely liked being out of doors, and brought as much painted fresh air as they could, back into the house with them.

Neither must you think that this painting of fresh air is an entirely easy or soon managed business. You may paint a modern French emotional landscape with a pail of whitewash and a pot of gas-tar in ten minutes, at the outside. I don't know how long the operator himself takes to it—of course some little more time must be occupied in plastering on the oil-paint so that it will stick, and not run; but the skill of a good plasterer is really all that is required,—the rather that in the modern idea of solemn symmetry you always make the bottom of your picture, as much as you can, like the top. You put seven or eight streaks of the plaster for your sky, to begin with; then you put in a row of bushes with the gas-tar, then you rub the ends of them into the same shapes upside down—you put three or four more streaks of white, to intimate the presence of a pool of water—and if you finish off with a log that looks something like a dead body, your picture will have the credit of being a digest of a whole novel of Gaboriau, and lead the talk of the season.

Far other was the kind of labour required of even the least disciple of the old English water-colour school. In the first place, the skill of laying a perfectly even and smooth tint with absolute precision of complex outline was attained to a degree which no amateur draughtsman can have the least conception of. Water-colour, under the

ordinary sketcher's mismanagement, drops and dries pretty nearly to its own fancy,—slops over every outline, clots in every shade, seams itself with undesirable edges, speckles itself with inexplicable grit, and is never supposed capable of representing anything it is meant for, till most of it has been washed out. But the great primary masters of the trade could lay, with unerring precision of tone and equality of depth, the absolute tint they wanted without a flaw or a retouch; and there is perhaps no greater marvel of artistic practice and finely accurate intention existing, in a simple kind, greater than the study of a Yorkshire waterfall, by Girtin, now in the British Museum, in which every sparkle, ripple, and current is left in frank light by the steady pencil which is at the same instant, and with the same touch, drawing the forms of the dark congeries of channelled rocks, while around them it disperses the glitter of their spray.

Then farther, on such basis of well-laid primary tint, the old water-colour men were wont to obtain their effects of atmosphere by the most delicate washes of transparent colour, reaching subtleties of gradation in misty light, which were wholly unthought of before their time. In this kind the depth of far-distant brightness, freshness, and mystery of morning air with which Copley Fielding used to invest the ridges of the South Downs, as they rose out of the blue Sussex

champaign, remains, and I believe must remain, insuperable, while his sense of beauty in the cloud-forms associated with higher mountains, enabled him to invest the comparatively modest scenery of our own island,—out of which he never travelled,—with a charm seldom attained by the most ambitious painters of Alp or Apennine.—*A. E.*, VI.

43. THE LOVE OF LANDSCAPE.—No race of men which is entirely bred in wild country, far from cities, ever enjoys landscape. They may enjoy the beauty of animals, but scarcely even that: a true peasant cannot see the beauty of cattle; but only qualities expressive of their serviceableness. I waive discussion of this to-day; permit my assertion of it, under my confident guarantee of future proof. Landscape can only be enjoyed by cultivated persons; and it is only by music, literature, and painting, that cultivation can be given. Also, the faculties which are thus received are hereditary; so that the child of an educated race has an innate instinct for beauty, derived from arts practised hundreds of years before its birth. Now farther note this, one of the loveliest things in human nature. In the children of noble races, trained by surrounding art, and at the same time in the practice of great deeds, there is an intense delight in the landscape of their country as *memorial*; a sense not

taught to them, nor teachable to any others ; but, in them, innate ; and the seal and reward of persistence in great national life ;—the obedience and the peace of ages having extended gradually the glory of the revered ancestors also to the ancestral land ; until the Motherhood of the dust, the mystery of the Demeter from whose bosom we came, and to whose bosom we return, surrounds and inspires, everywhere, the local awe of field and fountain ; the sacredness of landmark that none may remove, and of wave that none may pollute ; while records of proud days, and of dear persons, make every rock monumental with ghostly inscription, and every path lovely with noble desolateness.

Now, however checked by lightness of temperament, the instinctive love of landscape in us has this deep root, which, in your minds, I will pray you to disencumber from whatever may oppress or mortify it, and to strive to feel with all the strength of your youth that a nation is only worthy of the soil and the scenes that it has inherited, when, by all its acts and arts, it is making them more lovely for its children.—*L. A.*, I., § 24, 25.

44. CONDITIONS OF LANDSCAPE ART.—*You cannot have a landscape by Turner, without a country for him to paint ; you cannot have a portrait by Titian, without a man to be portrayed*

I need not prove that to you, I suppose, in these short terms ; but in the outcome I can get no soul to believe that the beginning of art *is in getting our country clean, and our people beautiful*. I have been ten years trying to get this very plain certainty—I do not say believed—but even thought of, as anything but a monstrous proposition. To get your country clean, and your people lovely ;—I assure you that is a necessary work of art to begin with ! There has indeed been art in countries where people lived in dirt to serve God, but never in countries where they lived in dirt to serve the devil. There has indeed been art where the people were not all lovely—where even their lips were thick—and their skins black, because the sun had looked upon them ; but never in a country where the people were pale with miserable toil and deadly shade, and where the lips of youth, instead of being full with blood, were pinched by famine, or warped with poison. . . .

And therefore these are the things that I have first and last to tell you in this place ;—that the fine arts are not to be learned by Locomotion, but by making the homes we live in lovely, and by staying in them ;—that the fine arts are not to be learned by Competition, but by doing our quiet best in our own way ;—that the fine arts are not to be learned by Exhibition, but by doing what is right, and making what is honest, whether it be

exhibited or not;—and, for the sum of all, that men must paint and build neither for pride nor for money, but for love; for love of their art, for love of their neighbour, and whatever better love may be than these, founded on these.—*L. A.*, IV., § 116, 124.

45. POPULAR ART.—The first great principle we have to hold by in dealing with the matter is, that the end of art is NOT to *amuse*; and that all Art which proposes amusement as its end, or which is sought for that end, must be of an inferior, and is probably of a harmful, class.

The end of Art is as serious as that of all other beautiful things—of the blue sky and the green grass, and the clouds and the dew. They are either useless, or they are of much deeper function than giving amusement. Whatever delight we take in them, be it less or more, is not the delight we take in play, or receive from momentary surprise. It might be a matter of some metaphysical difficulty to define the two kinds of pleasure, but it is perfectly easy for any of us to feel that there *is* generic difference between the delight we have in seeing a comedy and in watching a sunrise. Not but that there is a kind of *Divina Commedia*,—a dramatic change and power,—in all beautiful things: the joy of surprise and incident mingles in music, painting, architecture, and natural beauty itself, in an ennobled and enduring manner, with

the perfectness of eternal hue and form. But whenever the desire of change becomes principal; whenever we care only for new tunes, and new pictures, and new scenes, all power of enjoying Nature or Art is so far perished from us; and a child's love of toys has taken its place. The continual advertisement of new music (as if novelty were its virtue) signifies, in the inner fact of it, that no one now cares for music. The continual desire for new exhibitions means that we do not care for pictures; the continual demand for new books means that nobody cares to read.

Not that it would necessarily, and at all times, mean this; for in a living School of Art there will always be an exceeding thirst for, and eager watching of, freshly-developed thought. But it specially and sternly means this, when the interest is merely in the novelty; and great work in our possession is forgotten, while mean work, because strange and of some personal interest, is annually made the subject of eager observation and discussion.—*Cestus of Aglaia*, VIII. (*O. R.*, I., § 388, 389).

46.—L'ENVOY.—Now listen to me, if I have in these past details lost or burdened your attention; for this is what I have chiefly to say to you. The art of any country *is the exponent of its social and political virtues*. You can have noble art

only from noble persons, associated under laws fitted to their time and circumstances. And the best skill that any teacher of art could spend here in your help, would not end in enabling you even so much as rightly to draw the water-lilies in the Cherwell (and though it did, the work when done would not be worth the lilies themselves) unless both he and you were seeking, as I trust we shall together seek, in the laws which regulate the finest industries, the clue to the laws which regulate *all* industries, and in better obedience to which we shall actually have henceforward to live: not merely in compliance with our own sense of what is right, but under the weight of quite literal necessity. For the trades by which the British people has believed it to be the highest of destinies to maintain itself, cannot now long remain undisputed in its hands; its unemployed poor are daily becoming more violently criminal; and a certain distress in the middle classes, arising, *partly from their vanity in living always up to their incomes, and partly from their folly in imagining that they can subsist in idleness upon usury*, will at last compel the sons and daughters of English families to acquaint themselves with the principles of providential economy; and to learn that food can only be got out of the ground, and competence only secured by frugality; and that although it is not possible for all to be occupied in the highest arts, nor for any, guiltlessly,

to pass their days in a succession of pleasures, the most perfect mental culture possible to men is founded on their useful energies, and their best arts and brightest happiness are consistent, and consistent only, with their virtue.—*L. A.* I., § 27.

II.

EDUCATION.

47. THE STRAIT GATE OF ART.—All the arts of mankind, and womankind, are only rightly learned, or practised, when they are so with the definite purpose of pleasing or teaching others. A child dancing for its own delight,—a lamb leaping,—or a fawn at play, are happy and holy creatures; but they are not artists. An artist is—and recollect this definition—a person who has submitted to a law which it was painful to obey, that he may bestow a delight which it is gracious to bestow.

“A painful law,” I say; yet full of pain, not in the sense of torture, but of stringency, or constraint; and labour, increasing, it may be, sometimes into aching of limbs, and panting of breasts; but these stronger yet, for every ache, and broader for every pant; and farther and farther strengthened from danger of rheumatic ache, and consumptive pant.

This, so far as the Arts are concerned, is “entering in at the strait gate.” The word Strait, applied to the entrance in Life, and the word

Narrow, applied to the road of Life, do not mean that the road is so fenced that few can travel it, however much they wish, (like the entrance to the pit of a theatre,) but that, for each person, it is at first so stringent, so difficult, and so dull, being between close hedges, that few *will* enter it, though all *may*.—*F. C.*, Letter 59.

48. TASTE AND CHARACTER.—No statement of mine has been more earnestly or oftener controverted than that good taste is essentially a moral quality. “No,” say many of my antagonists, “taste is one thing, morality is another. Tell us what is pretty: we shall be glad to know that; but we need no sermons, even were you able to preach them, which may be doubted.”

Permit me, therefore, to fortify this old dogma of mine somewhat. Taste is not only a part and an index of morality;—it is the *ONLY* morality. The first, and last, and closest trial question to any living creature is, “What do you like?” Tell me what you like, and I’ll tell you what you are. Go out into the street, and ask the first man or woman you meet, what their “taste” is; and if they answer candidly, you know them, body and soul. “You, my friend in the rags, with the unsteady gait, what do *you* like?” “A pipe, and a quartern of gin.” I know you. “You, good woman, with the quick step and tidy bonnet, what do you like?” “A swept hearth, and a clean

tea-table; and my husband opposite me, and a baby at my breast." Good, I know you also. "You, little girl with the golden hair and the soft eyes, what do you like?" "My canary, and a run among the wood hyacinths." "You, little boy with the dirty hands, and the low forehead, what do you like?" "A shy at the sparrows, and a game at pitch farthing." Good; we know them all now. What more need we ask?

"Nay," perhaps you answer; "we need rather to ask what these people and children do, than what they like. If they *do* right, it is no matter that they like what is wrong; and if they *do* wrong, it is no matter that they like what is right. Doing is the great thing; and it does not matter that the man likes drinking, so that he does not drink; nor that the little girl likes to be kind to her canary, if she will not learn her lessons; nor that the little boy likes throwing stones at the sparrows, if he goes to the Sunday school." Indeed, for a short time, and in a provisional sense, this is true. For if, resolutely, people do what is right, in time to come they like doing it. But they only are in a right moral state when they *have* come to like doing it; and as long as they don't like it, they are still in a vicious state. The man is not in health of body who is always thinking of the bottle in the cupboard, though he bravely bears his thirst; but the man who heartily enjoys water in the morning, and wine in the evening, each in its

proper quantity and time. And the entire object of true education is to make people not merely *do* the right things, but *enjoy* the right things:—not merely industrious, but to love industry—not merely learned, but to love knowledge—not merely pure, but to love purity—not merely just, but to hunger and thirst after justice.

But you may answer or think, “Is the liking for outside ornaments,—for pictures, or statues, or furniture, or architecture, a moral quality?” Yes, most surely, if a rightly set liking. Taste for *any* pictures or statues is not a moral quality, but taste for good ones is. Only here again we have to define the word “good.” I don’t mean by “good,” clever—or learned—or difficult in the doing. Take a picture by Teniers, of sots quarrelling over their dice; it is an entirely clever picture; so clever that nothing in its kind has ever been done equal to it; but it is also an entirely base and evil picture. It is an expression of delight in the prolonged contemplation of a vile thing, and delight in that is an “unmannered,” or “immoral” quality. It is “bad taste” in the profoundest sense—it is the taste of the devils. On the other hand, a picture of Titian’s, or a Greek statue, or a Greek coin, or a Turner landscape, expresses delight in the perpetual contemplation of a good and perfect thing. That is an entirely moral quality—it is the taste of the angels. And all delight in fine art, and all love

of it, resolve themselves into simple love of that which deserves love. That deserving is the quality which we call "loveliness"—(we ought to have an opposite word, hateliness, to be said of the things which deserve to be hated); and it is not an indifferent nor optional thing whether we love this or that; but it is just the vital function of all our being. What we *like* determines what we *are*, and is the sign of what we are; and to teach taste is inevitably to form character.—*C. W. O.*, II., § 54–56.

49. ART THE TEST OF MORALS.—Accurately in proportion to the rightness of the cause, and purity of the emotion, is the possibility of the fine art. A maiden may sing of her lost love, but a miser cannot sing of his lost money. And with absolute precision, from highest to lowest, *the fineness of the possible art is an index of the moral purity and majesty of the emotion it expresses.* You may test it practically at any instant. Question with yourselves respecting any feeling that has taken strong possession of your mind, "Could this be sung by a master, and sung nobly, with a true melody and art?" Then it is a right feeling. Could it not be sung at all, or only sung ludicrously? It is a base one. And that is so in all the arts; so that with mathematical precision, subject to no error or exception, the art of a nation, so far as it exists, is an exponent of its ethical state.

An exponent, observe, and exalting influence; but not the root or cause. You cannot paint or sing yourselves into being good men; you must be good men before you can either paint or sing, and then the colour and sound will complete in you all that is best.—*L. A.*, III., § 67, 68.

50. MUSIC AND POETRY INTERDEPENDENT.—The law of nobleness in music and poetry is essentially one. Both are the necessary and natural expression of pure and virtuous human joy, or sorrow, by the lips and fingers of persons trained in right schools to manage their bodies and souls. Every child should be taught, from its youth, to govern its voice discreetly and dexterously, as it does its hands; and not to be able to sing should be more disgraceful than not being able to read or write. For it is quite possible to lead a virtuous and happy life without books, or ink; but not without wishing to sing, when we are happy; nor without meeting with continual occasions when our song, if right, would be a kind service to others.—*Rock Honeycomb*, Preface.

51. BORDER MINSTRELSY.—The Border district of Scotland was at this time, of all districts of the inhabited world, pre-eminently the singing country,—that which most naturally expressed its noble thoughts and passions in song.

The easily traceable reasons for this character

are, I think, the following ; (many exist, of course, untraceably).

First, distinctly pastoral life, giving the kind of leisure which, in all ages and countries, solaces itself with simple music, if other circumstances are favourable,—that is to say, if the summer air is mild enough to allow repose, and the race has imagination enough to give motive to verse.

The Scottish Lowland air is, in summer, of exquisite clearness and softness,—the heat never so great as to destroy energy, and the shepherd's labour not severe enough to occupy wholly either mind or body. A Swiss herd may have to climb a hot ravine for thousands of feet, or cross a difficult piece of ice, to rescue a lamb, or lead his flock to an isolated pasture. But the borderer's sheep-path on the heath is, to his strong frame, utterly without labour or danger ; he is free-hearted and free-footed all the summer day long ; in winter darkness and snow finding yet enough to make him grave and stout of heart.

Secondly, the soldier's life, passing gradually, not in cowardice or under foreign conquest, but by his own increasing kindness and sense, into that of the shepherd ; thus, without humiliation, leaving the war-wounded past to be recalled for its sorrow and its fame.

Thirdly, the extreme sadness of that past itself : giving pathos and awe to all the imagery and power of Nature.

Fourthly, (this a merely physical cause, yet a very notable one,) the beauty of the sound of Scottish streams.

I know no other waters to be compared with them; such streams can only exist under very subtle concurrence of rock and climate. There must be much soft rain, not (habitually) tearing the hills down with floods; and the rocks must break irregularly and jaggedly. Our English Yorkshire shales and limestones merely form—carpenter-like—tables and shelves for the rivers to drip and leap from; while the Cumberland and Welsh rocks break too boldly, and lose the multiplied chords of musical sound. Farther, the loosely-breaking rock must contain hard pebbles, to give the level shore of white shingle, through which the brown water may stray wide, in rippling threads. The fords even of English rivers have given the names to half our prettiest towns and villages;—(the difference between ford and bridge curiously—if one may let one's fancy loose for a moment—characterising the difference between the baptism of literature, and the edification of mathematics, in our two great universities);—but the pure crystal of the Scottish pebbles, giving the stream its gradations of amber to the edge, and the sound as of “ravishing division to the lute,” make the Scottish fords the happiest pieces of all one's day walk.

With the murmur, whisper, and low fall of these

streamlets, unmatched for mystery and sweetness, we must remember also the variable, but seldom wild, thrilling of the wind among the recesses of the glens; and, not least, the need of relief from the monotony of occupations involving some rhythmic measure of the beat of foot or hand, during the long evenings at the hearthside.

In the rude lines describing such passing of hours quoted by Scott in his introduction to the "Border Minstrelsy," you find the grandmother spinning, with her stool next the hearth,—“for she was old, and saw right dimly” (fire-light, observe, all that was needed even then;) “she spins to make a web of good Scots linen,” (can you show such now, from your Glasgow mills?) The father is pulling hemp (or beating it). The only really beautiful piece of song which I heard at Verona, during several months’ stay there in 1869, was the low chant of girls unwinding the cocoons of the silkworm, in the cottages among the olive-clad hills on the north of the city. Never any in the streets of it; there, only insane shrieks of Republican populace, or senseless dance-music, played by operatic-military bands.

And one of the most curious points connected with the study of Border-life is this connection of its power of song either with its industry or human love, but never with the religious passion of its “Independent” mind. The definite subject of the piper or minstrel being always war or love,

(peasant love as much honoured as the proudest,) his feeling is steadily antagonistic to Puritanism; and the discordance of Scottish modern psalmody is as unexampled among civilised nations as the sweetness of their ballads—shepherds' or ploughmen's (the plough and pulpit coming into fatalest opposition in Ayrshire); so that Wandering Willie must, as a matter of course, head the troop of Redgauntlet's riotous fishermen with "Merrily danced the Quaker's wife." And see Wandering Willie's own description of his gude-sire: "A rambling, rattling chiel he had been, in his young days, and could play weel on the pipes;—he was famous at 'Hoopers and Girders;' a' Cumberland could not touch him at 'Jockie Lattin;' and he had the finest finger for the back-lilt between Berwick and Carlisle;—the like o' Steenie was na the sort they made Whigs o'."—And yet, to this Puritan element, Scott owed quite one of the most noble conditions of his mental life.—*F. C.*, Letter 32.

52. ASHESTIEL AND ABBOTSFORD.—As I drove from Abbotsford to Ashestiel, Tweed and Ettrick were both in flood; not dun nor wrathful, but in the clear fulness of their perfect strength; and from the bridge of Ettrick I saw the two streams join, and the Tweed for miles down the vale, and the Ettrick for miles up among his hills,—each of them, in the multitude

of their windless waves, a march of infinite light, dazzling,—interminable,—intervals indeed with eddies of shadow, but, for the most part, gliding paths of sunshine, far-swept beside the green glow of their level inches, the blessing of them, and the guard:—the stately moving of the many waters, more peaceful than their calm, only mighty, their rippled spaces fixed like orient clouds, their pools of pausing current binding the silver edges with a gloom of amber and gold; and all along their shore, beyond the sward, and the murmurous shingle, processions of dark forest, in strange majesty of sweet order, and unwounded grace of glorious age.

The house of Ashestiel itself is only three or four miles above this junction of Tweed and Ettrick. It has been sorrowfully changed since Sir Walter's death, but the essential make and set of the former building can still be traced. There is more excuse for Scott's flitting to Abbotsford than I had guessed, for *this* house stands, conscious of the river rather than commanding it, on a brow of meadowy bank, falling so steeply to the water that nothing can be seen of it from the windows. Beyond, the pasture-land rises steep three or four hundred feet against the northern sky, while behind the house, south and east, the moorlands lift themselves in gradual distance to still greater height, so that virtually neither sunrise nor sunset can be seen from

the deep-nested dwelling. A tricklet of stream wavers to and fro down to it from the moor, through a grove of entirely natural wood,—oak, birch, and ash, fantastic and bewildering, but nowhere gloomy or decayed, and carpeted with anemone. Between this wild avenue and the house, the old garden remains as it used to be, large, gracious, and tranquil; its high walls swept round it in a curving line like a war rampart, following the ground; the fruit-trees, trained a century since, now with gray trunks a foot wide, flattened to the wall like sheets of crag; the strong bars of their living trellis charged, when I saw them, with clusters of green-gage, soft bloomed into gold and blue; and of orange-pink magnum bonum, and crowds of ponderous pear, countless as leaves. Some open space of grass and path, now all redesigned for modern needs, must always have divided the garden from what was properly the front of the house, where the main entrance is now, between advanced wings, of which only the westward one is of Sir Walter's time: its ground floor being the drawing-room, with his own bedroom of equal size above, cheerful and luminous both, enfiling the house front with their large side windows, which commanded the sweep of Tweed down the valley, and some high masses of Ettrick Forest beyond, this view being now mostly shut off by the opposite wing, added for symmetry! But Sir Walter saw it

fair through the morning clouds when he rose, holding himself, nevertheless, altogether regardless of it, when once at work. At Ashestiel and Abbotsford alike, his work-room is strictly a writing-office, what windows they have being designed to admit the needful light, with an extremely narrow vista of the external world. Courtyard at Abbotsford, and bank of young wood beyond: nothing at Ashestiel but the green turf of the opposite fells with the sun on it, if sun there were, and silvery specks of passing sheep.

The room itself, Scott's true "memorial" if the Scotch people had heart enough to know him, or remember, is a small parlour on the ground-floor of the north side of the house, some twelve feet deep by eleven wide; the single window little more than four feet square, or rather four feet *cube*, above the desk, which is set in the recess of the mossy wall, the light thus entering in front of the writer, and reflected a little from each side. This window is set to the left in the end wall, leaving a breadth of some five feet or a little more on the fireplace side, where now, brought here from Abbotsford, stands the garden chair of the last days.

Contentedly, in such space and splendour of domicile, the three great poems were written, "Waverley" begun; and all the make and tenure of his mind confirmed, as it was to remain, or

revive, through after time of vanity, trouble, and decay.

A small chamber, with a fair world outside :—such are the conditions, as far as I know or can gather, of all greatest and best mental work. At heart, the monastery cell always, changed sometimes, for special need, into the prison cell. But, as I meditate more and more closely what reply I may safely make to the now eagerly pressed questioning of my faithful scholars, what books I would have them read, I find the first broadly-swept definition may be—Books written in the country. None worth spending time on, and few that are quite safe to touch, have been written in towns.

And my next narrowing definition would be, Books that have good music in them,—that are rightly-rhythmic : a definition which includes the delicacy of perfect prose, such as Scott's ; and which *excludes* at once a great deal of modern poetry, in which a dislocated and convulsed versification has been imposed on the ear in the attempt to express uneven temper, and unprincipled feeling.

By unprincipled feeling, I mean whatever part of passion the writer does not clearly discern for right or wrong, and concerning which he betrays the reader's moral judgment into false sympathy or compassion. No really great writer ever does so : neither Scott, Burns, nor Byron ever waver

for an instant, any more than Shakespere himself, in their estimate of what is fit and honest, or harmful and base. Scott always punishes even error, how much more fault, to the uttermost; nor does Byron, in his most defiant and mocking moods, ever utter a syllable that defames virtue, or disguises sin.—*F. C.*, Letter 92.

53. BYRON.—Neither the force and precision, nor the rhythm, of Byron's language, were at all the central reasons for my taking him for master. Knowing the Song of Moses and the Sermon on the Mount by heart, and half the Apocalypse besides, I was in no need of tutorship either in the majesty or simplicity of English words; and for their logical arrangement, I had had Byron's own master, Pope, since I could lisp. But the thing wholly new and precious to me in Byron was his measured and living *truth*—measured, as compared with Homer; and living, as compared with everybody else. My own inexorable measuring wand,—not enchanter's, but cloth-worker's and builder's,—reduced to mere incredibility all the statements of the poets usually called sublime. It was of no use for Homer to tell me that Pelion was put on the top of Ossa. I knew perfectly well it wouldn't go on the top of Ossa. Of no use for Pope to tell me that trees where his mistress looked would crowd into a shade, because I was satisfied that they would do nothing of the

sort. Nay, the whole world, as it was described to me either by poetry or theology, was every hour becoming more and more shadowy and impossible. I rejoiced in all stories of Pallas and Venus, of Achilles and Eneas, of Elijah and St. John ; but, without doubting in my heart that there were real spirits of wisdom and beauty, nor that there had been invincible heroes and inspired prophets, I felt already, with fatal and increasing sadness, that there was no clear utterance about any of them—that there were for *me* neither goddess guides nor prophetic teachers ; and that the poetical histories, whether of this world or the next, were to me as the words of Peter to the shut up disciples—“as idle tales ; and they believed them not.”

But here at last I had found a man who spoke only of what he had seen, and known ; and spoke without exaggeration, without mystery, without enmity, and without mercy. “That *is* so ;—make what you will of it !” Shakespere said the Alps voided their rheum on the valleys, which indeed is precisely true, with the final truth, in that matter, of James Forbes,—but it was told in a mythic manner, and with an unpleasant British bias to the nasty. But Byron, saying that “the glacier’s cold and restless mass moved onward day by day,” said plainly what he saw and knew,—no more. So also, the Arabian Nights had told me of thieves who lived in enchanted caves,

and beauties who fought with genii in the air; but Byron told me of thieves with whom he had ridden on their own hills, and of the fair Persians or Greeks who lived and died under the very sun that rose over my visible Norwood hills.

And in this narrow, but sure, truth, to Byron, as already to me, it appeared that Love was a transient thing, and Death a dreadful one. He did not attempt to console me for Jessie's death, by saying she was happier in Heaven; or for Charles's,* by saying it was a Providential dispensation to me on Earth. He did not tell me that war was a just price for the glory of captains, or that the national command of murder diminished its guilt. Of all things within range of human thought he felt the facts, and discerned the natures with accurate justice.

But even all this he might have done, and yet been no master of mine, had not he sympathised with me in reverent love of beauty, and indignant recoil from ugliness. The witch of the Staubbach in her rainbow was a greatly more pleasant vision than Shakespere's, like a rat without a tail, or Burns's, in her cutty sark. The sea-king Conrad had an immediate advantage with me over Coleridge's long, lank, brown, and ancient, mariner; and whatever Pope might have gracefully said, or honestly felt, of Windsor woods and streams, was mere tinkling cymbal to me,

* See § 89 of this volume.

compared with Byron's love of Lachin-y-Gair.
—*Præterita*, I. VIII.

54. DR. JOHNSON.—Had it not been for constant reading of the Bible, I might probably have taken Johnson for my model of English. To a useful extent I have always done so; in my first essays, partly because I could not help it, partly of set, and well set, purpose.

On our foreign journeys, it being of course desirable to keep the luggage as light as possible, my father had judged that four little volumes of Johnson—the *Idler* and the *Rambler*—did, under names wholly appropriate to the circumstances, contain more substantial literary nourishment than could be, from any other author, packed into so portable compass. And accordingly, in spare hours, and on wet days, the turns and returns of reiterated *Rambler* and iterated *Idler* fastened themselves in my ear and mind; nor was it possible for me, till long afterwards, to quit myself of Johnsonian symmetry and balance in sentences intended, either with swordsman's or paviour's blow, to cleave an enemy's crest, or drive down the oaken pile of a principle. I never for an instant compared Johnson to Scott, Pope, Byron, or any of the really great writers whom I loved. But I at once and for ever recognised in him a man entirely sincere, and infallibly wise in the view and estimate he gave of the common questions,

business, and ways of the world. I valued his sentences not primarily because they were symmetrical, but because they were just, and clear; it is a method of judgment rarely used by the average public, who ask from an author always, in the first place, arguments in favour of their own opinions, in elegant terms; and are just as ready with their applause for a sentence of Macaulay's, which may have no more sense in it than a blot pinched between doubled paper, as to reject one of Johnson's, telling against their own prejudice,—though its symmetry be as of thunder answering from two horizons.

I hold it more than happy that, during those continental journeys, in which the vivid excitement of the greater part of the day left me glad to give spare half-hours to the study of a thoughtful book, Johnson was the one author accessible to me. No other writer could have secured me, as he did, against all chance of being misled by my own sanguine and metaphysical temperament. He taught me carefully to measure life, and distrust fortune; and he secured me by his adamant common sense, for ever, from being caught in the cobwebs of German metaphysics, or sloughed in the English drainage of them.—*Præterita*, I. XII.

55. BOOKS.—All books are divisible into two classes: the books of the hour, and the books of

all time. Mark this distinction—it is not one of quality only. It is not merely the bad book that does not last, and the good one that does. It is a distinction of species. There are good books for the hour, and good ones for all time; bad books for the hour, and bad ones for all time. I must define the two kinds before I go farther.

The good book of the hour, then,—I do not speak of the bad ones—is simply the useful or pleasant talk of some person whom you cannot otherwise converse with, printed for you. Very useful often, telling you what you need to know; very pleasant often, as a sensible friend's present talk would be. These bright accounts of travels; good-humoured and witty discussions of question; lively or pathetic story-telling in the form of novel; firm fact-telling, by the real agents concerned in the events of passing history;—all these books of the hour, multiplying among us as education becomes more general, are a peculiar possession of the present age: we ought to be entirely thankful for them, and entirely ashamed of ourselves if we make no good use of them. But we make the worst possible use if we allow them to usurp the place of true books: for, strictly speaking, they are not books at all, but merely letters or newspapers in good print. Our friend's letter may be delightful, or necessary, to-day: whether worth keeping or not, is to be considered. The newspaper may be entirely proper at breakfast-time,

but assuredly it is not reading for all day. So, though bound up in a volume, the long letter which gives you so pleasant an account of the inns, and roads, and weather last year at such a place, or which tells you that amusing story, or gives you the real circumstances of such and such events, however valuable for occasional reference, may not be, in the real sense of the word, a "book" at all, nor in the real sense, to be "read." A book is essentially not a talked thing, but a written thing; and written, not with a view of mere communication, but of permanence. The book of talk is printed only because its author cannot speak to thousands of people at once; if he could, he would—the volume is mere *multiplication* of his voice. You cannot talk to your friend in India; if you could, you would; you write instead: that is mere *conveyance* of voice. But a book is written, not to multiply the voice merely, not to carry it merely, but to perpetuate it. The author has something to say which he perceives to be true and useful, or helpfully beautiful. So far as he knows, no one has yet said it; so far as he knows, no one else can say it. He is bound to say it, clearly and melodiously if he may; clearly, at all events. In the sum of his life he finds this to be the thing, or group of things, manifest to him;—this, the piece of true knowledge, or sight, which his share of sunshine and earth has permitted him to seize. He would fain set it down for ever; engrave it

on rock, if he could ; saying, " This is the best of me ; for the rest, I ate, and drank, and slept, loved, and hated, like another ; my life was as the vapour, and is not ; but this I saw and knew : this, if anything of mine, is worth your memory." That is his " writing ;" it is, in his small human way, and with whatever degree of true inspiration is in him, his inscription, or scripture. That is a " Book."—*S. and L.*, I., § 8-10.

56. THE ARISTOCRACY OF INTELLECT.—Now, books of this kind have been written in all ages by their greatest men,—by great readers, great statesmen, and great thinkers. These are all at your choice ; and Life is short. You have heard as much before ;—yet, have you measured and mapped out this short life and its possibilities ? Do you know, if you read this, that you cannot read that—that what you lose to-day you cannot gain to-morrow ? Will you go and gossip with your housemaid, or your stable-boy, when you may talk with queens and kings ; or flatter yourselves that it is with any worthy consciousness of your own claims to respect, that you jostle with the hungry and common crowd for *entrée* here, and audience there, when all the while this eternal court is open to you, with its society, wide as the world, multitudinous as its days, the chosen, and the mighty, of every place and time ? Into that you may enter always ; in

that you may take fellowship and rank according to your wish ; from that, once entered into it, you can never be an outcast but by your own fault ; by your aristocracy of companionship there, your own inherent aristocracy will be assuredly tested, and the ^{sent} ^{ness} ^{Min} selves with which you strive to take high place in the society of the living, measured, as to all the truth and sincerity that are in them, by the place you desire to take in this company of the Dead.

“The place you desire,” and the place *you fit yourself for*, I must also say ; because, observe, this court of the past differs from all living aristocracy in this :—it is open to labour and to merit, but to nothing else. No wealth will bribe, no name overawe, no artifice deceive, the guardian of those Elysian gates. In the deep sense, no vile or vulgar person ever enters there. At the portières of that silent Faubourg St. Germain, there is but brief question : “Do you deserve to enter ? Pass. Do you ask to be the companion of nobles ? Make yourself noble, and you shall be. Do you long for the conversation of the wise ? Learn to understand it, and you shall hear it. But on other terms ?—no. If you will not rise to us, we cannot stoop to you. The living lord may assume courtesy, the living philosopher explain his thought to you with considerate pain ; but here we neither feign nor interpret ; you must rise to the level of our thoughts if you would be

gladdened by them, and share our feelings if you would recognise our presence.”—*S. and L.*, I., § 11, 12.

57. SCHOLARSHIP.—You might read all the books in the British Museum (if you could live long enough), and remain an utterly “illiterate,” uneducated person; but if you read ten pages of a good book, letter by letter,—that is to say, with real accuracy,—you are for ever more in some measure an educated person. The entire difference between education and non-education (as regards the merely intellectual part of it), consists in this accuracy. A well-educated gentleman may not know many languages,—may not be able to speak any but his own,—may have read very few books. But whatever language he knows, he knows precisely; whatever word he pronounces, he pronounces rightly; above all, he is learned in the *peerage* of words; knows the words of true descent and ancient blood, at a glance, from words of modern canaille; remembers all their ancestry, their intermarriages, distant relationships, and the extent to which they were admitted, and offices they held, among the national noblesse of words at any time, and in any country. But an uneducated person may know, by memory, many languages, and talk them all, and yet truly know not a word of any,—not a word even of his own. An ordinarily clever and

sensible seaman will be able to make his way ashore at most ports ; yet he has only to speak a sentence of any language to be known for an illiterate person ; so also the accent, or turn of expression of a single sentence, will at once mark a scholar. And this is so strongly felt, so conclusively admitted, by educated persons, that a false accent or a mistaken syllable is enough, in the parliament of any civilised nation, to assign to a man a certain degree of inferior standing for ever.—*S. and L.*, I., § 15.

58. WORK OF IMAGINATION IN LITERATURE.
—The two great loves,—that of husband and wife, representing generally the family affections, and that of mankind, to which, at need, the family affection must be sacrificed,—include, rightly understood, all the noble sentiments of humanity. Modern philosophy supposes these conditions of feeling to have been always absurd, and at present, happily, nearly extinct ; and that the only proper, or, in future, possible, motives of human action are the three wholly unsentimental desires, — the lust of the flesh, (hunger, thirst, and sexual passion), the lust of the eyes, (covetousness), and the pride of life, (personal vanity).

Into one or other, then, of these two forms of sentiment, conjugal and family love, or compassion, all human happiness, properly so called, resolves

itself; but the spurious or counter-happiness of lust, covetousness, and vanity being easily obtained, and naturally grasped at, instead, may altogether occupy the lives of men, without ever allowing them to know what happiness means.

But in the use I have just made of the word "compassion," I mean something very different from what is usually understood by it. Compassion is the Latin form of the Greek word "sympathy"—the English for both is "fellow-feeling;" and the condition of delight in characters higher than our own is more truly to be understood by the word "compassion" than the pain of pity for those inferior to our own; but in either case, the imaginative understanding of the natures of others, and the power of putting ourselves in their place, is the faculty on which the virtue depends. So that an unimaginative person can neither be reverent nor kind. The main use of works of fiction, and of the drama, is to supply, as far as possible, the defect of this imagination in common minds. But there is a curious difference in the nature of these works themselves, dependent on the degree of imaginative power of the writers, which I must at once explain, else I can neither answer for you my own question, why Scott could not write a play, nor show you, which is my present object, the real nature of sentiment.

Do you know, in the first place, what a play

II. EDUCATION.

is? or what a poem is? or what
That is to say, do you know the
necessary distinctions in literary art
brought these distinctive names into use .
had better first, for clearness' sake, call all the
three "poems," for all the three are so, when
they are good, whether written in verse or prose.
All truly imaginative account of man is poetic ;
but there are three essential kinds of poetry,—
one dramatic, one lyric, and one epic.

Dramatic poetry is the expression by the poet
of other people's feelings, his own not being told.

Lyric poetry is the expression by the poet of
his own feelings.

Epic poetry is account given by the poet of
other people's external circumstances, and of
events happening to them, with only such
expression of their feelings, or his own, as he
thinks may be conveniently added.

The business of Dramatic poetry is therefore
with the heart essentially ; it despises external
circumstance.

Lyric poetry may speak of anything that
excites emotion in the speaker ; while Epic
poetry insists on external circumstances, and no
more exhibits the heart-feeling than as it may be
gathered from these.

For instance, the fight between the Prince of
Wales and Hotspur, in Henry the Fourth, corre-
sponds closely, in the character of the event

fight of Fitz-James with Roderick,
of the Lake. But Shakespere's
his subject is strictly dramatic ;

is, strictly epic.

Shakespere gives you no account whatever of any blow or wound ; his stage direction is, briefly, "Hotspur is wounded and falls." Scott gives you accurate account of every external circumstance ; and the finishing touch of botanical accuracy,—

"Down came the blow ; but in the *heath*
The erring blade found bloodless sheath,"

makes his work perfect, as epic poetry. And Scott's work is always epic, and it is contrary to his very nature to treat any subject dramatically.

That is the technical distinction, then, between the three modes of work. But the gradation of power in all three depends on the degree of imagination with which the writer can enter into the feelings of other people. Whether in expressing theirs or his own, and whether in expressing their feelings only, or also the circumstances surrounding them, his power depends on his being able to feel as they do ; in other words, on his being able to conceive character. And the literature which is not poetry at all, which is essentially unsentimental, or anti-poetic, is that which is produced by persons who have no imagination ; and whose merit (for of course I

am not speaking of bad literature) is in their wit or sense, instead of their imagination.

The most prosaic,—in this sense,—piece I have ever myself examined, in the literature of any nation, is the *Henriade* of Voltaire. You may take that as a work of a man whose head was as destitute of imaginative power as it is possible for the healthy cerebral organisation of a highly developed mammalian animal to be. The description of the storm which carries Henry to Jersey, and of the hermit in Jersey "*que Dieu lui fit connaître,*" and who, on that occasion, "*au bord d'une onde pure, offre un festin champêtre,*" cannot be rivalled, for stupor in conceptive power, among printed books of reputation. On the other hand, Voltaire's wit, and reasoning faculties, are nearly as strong as his imagination is weak. His natural disposition is kind; his sympathy, therefore, is sincere with any sorrow that he can conceive; and his indignation great against injustices of which he cannot comprehend the pathetic motives. Now, notice farther this, which is very curious, and to me inexplicable, but not on that account less certain as a fact.

The imaginative power always purifies; the want of it therefore as essentially defiles; and as the wit-power is apt to develop itself through absence of imagination, it seems as if wit itself had a defiling tendency. In Pindar, Homer, Virgil, Dante, and Scott, the colossal powers of

imagination result in absolute virginal purity of thought. The defect of imagination and the splendid rational power in Pope and Horace associate themselves—it is difficult to say in what decided measures—with foulness of thought. The *Candide* of Voltaire, in its gratuitous filth, its acute reasoning, and its entire vacuity of imagination, is a standard of what may perhaps be generally and fitly termed “fimetic literature,” still capable, by its wit, and partial truth, of a certain service in its way. But lower forms of modern literature and art—Gustave Doré’s paintings, for instance—are the corruption, in national decrepitude, of this pessimist method of thought; and of these, the final condemnation is true—they are neither fit for the land, nor *yet* for the dunghill.

It is one of the most curious problems respecting mental government to determine how far this fimetic taint must necessarily affect intellects in which the reasoning and imaginative powers are equally balanced, and both of them at high level,—as in Aristophanes, Shakespere, Chaucer, Molière, Cervantes, and Fielding; but it always indicates the side of character which is unsympathetic, and therefore unkind; (thus Shakespere makes Iago the foulest in thought, as cruelest in design, of all his villains), but which, in men of noble nature, is their safeguard against weak enthusiasms and ideals. It is impossible,

however, that the highest conditions of tenderness in affectionate conception can be reached except by the absolutely virginal intellect. Shakespere and Chaucer throw off, at noble work, the lower part of their natures as they would a rough dress; and you may also notice this, that the power of conceiving personal, as opposed to general, character, depends on this purity of heart and sentiment. The men who cannot quit themselves of the impure taint, never invent character, properly so called; they only invent symbols of common humanity. Even Fielding's Allworthy is not a character, but a type of a simple English gentleman; and Squire Western is not a character, but a type of the rude English squire. But Sir Roger de Coverley is a character, as well as a type; there is no one else like him; and the masters of Tullyveolan, Ellangowan, Monkbarns, and Osbaldistone Hall, are all, whether slightly or completely drawn, portraits, not mere symbols. —*F. C.*, Letter 34.

59. THE CLASSICS AS TEACHERS. — The Homeric poems are not conceived didactically, but are didactic in their essence, as all good art is. There is an increasing insensibility to this character, and even an open denial of it, among us, now, which is one of the most curious errors of modernism,—the peculiar and judicial blindness of an age which, having long practised art

and poetry for the sake of pleasure only, has become incapable of reading their language when they were both didactic: and also having been itself accustomed to a professedly didactic teaching, which yet, for private interests, studiously avoids collision with every prevalent vice of its day (and especially with avarice), has become equally dead to the intensely ethical conceptions of a race which habitually divided all men into two broad classes of worthy or worthless;—good and good for nothing. And even the celebrated passage of Horace about the *Iliad* is now misread or disbelieved, as if it was impossible that the *Iliad* could be instructive because it is not like a sermon. Horace does not say that it is like a sermon, and would have been still less likely to say so, if he ever had had the advantage of hearing a sermon. “I have been reading that story of Troy again” (thus he writes to a noble youth of Rome whom he cared for), “quietly at Præneste, while you have been busy at Rome; and truly I think that what is base and what is noble, and what useful and useless, may be better learned from that than from all Chrysippus’ and Crantor’s talk put together.” Which is profoundly true, not of the *Iliad* only, but of all other great art whatsoever; for all pieces of such art are didactic in the purest way, indirectly and occultly, so that, first, you shall only be bettered by them if you are already hard at work in

bettering yourself; and when you *are* bettered by them it shall be partly with a general acceptance of their influence, so constant and subtle that you shall be no more conscious of it than of the healthy digestion of food; and partly by a gift of unexpected truth, which you shall only find by slow mining for it;—which is withheld on purpose, and close-locked, that you may not get it till you have forged the key of it in a furnace of your own heating. And this withholding of their meaning is continual, and confessed, in the great poets. Thus Pindar says of himself: “There is many an arrow in my quiver, full of speech to the wise, but, for the many, they need interpreters.” And neither Pindar, nor Æschylus, nor Hesiod, nor Homer, nor any of the greater poets or teachers of any nation or time, ever spoke but with intentional reservation: nay, beyond this, there is often a meaning which they themselves cannot interpret,—which it may be for ages long after them to interpret,—in what they said, so far as it recorded true imaginative vision. For all the greatest myths have been seen, by the men who tell them, involuntarily and passively,—seen by them with as great distinctness (and in some respects, though not in all, under conditions as far beyond the control of their will) as a dream sent to any of us by night when we dream clearest; and it is this veracity of vision that

could not be refused, and of moral that could not be foreseen, which in modern historical inquiry has been left wholly out of account: being indeed the thing which no merely historical investigator can understand, or even believe; for it belongs exclusively to the creative or artistic group of men, and can only be interpreted by those of their race, who themselves in some measure also see visions and dream dreams.

So that you may obtain a more truthful idea of the nature of Greek religion and legend from the poems of Keats, and the nearly as beautiful, and, in general grasp of subject, far more powerful, recent work of Morris, than from frigid scholarship, however extensive. Not that the poet's impressions or renderings of things are wholly true, but their truth is vital, not formal. They are like sketches from life by Reynolds or Gainsborough, which may be demonstrably inaccurate or imaginary in many traits, and indistinct in others, yet will be in the deepest sense like, and true; while the work of historical analysis is too often weak with loss, through the very labour of its miniature touches, or useless in clumsy and vapid veracity of externals, and complacent security of having done all that is required for the portrait, when it has measured the breadth of the forehead, and the length of the nose.—*Q. A.*, I., § 17.

60. FICTION.—A feigned, fictitious, artificial, super-natural, put-together-out-of-one's head, thing. All this it must be, to begin with; the best type of it being the most practically fictile—a Greek vase. A thing which has two sides to be seen, two handles to be carried by, and a bottom to stand on, and a top to be poured out of, this every right fiction *is*, whatever else it may be. Planned rigorously, rounded smoothly, balanced symmetrically, handled handily, lipped softly for pouring out oil and wine. Painted daintily at last with images of eternal things—

For ever shalt thou love, and she be fair.

Quite a different thing from a “cast,”—this work of clay in the hands of the potter, as it seemed good to the potter to make it. Very interesting, a cast from life may perhaps be; more interesting, to some people perhaps, a cast from death;—most modern novels are like specimens from Lyme Regis, impressions of skeletons in mud.

“Planned rigorously”—I press the conditions again one by one—it must be, as ever Memphian labyrinth or Norman fortress. Intricacy full of delicate surprise; covered way in secrecy of accurate purposes, not a stone useless, nor a word nor an incident thrown away.

“Rounded smoothly”—the wheel of Fortune revolving with it in unfelt swiftness; like the

world, its story rising like the dawn, closing like the sunset, with its own sweet light for every hour.

“Balanced symmetrically”—having its two sides clearly separate, its war of good and evil rightly divided. Its figures moving in majestic law of light and shade.

“Handled handily”—so that, being careful and gentle, you can take easy grasp of it and all that it contains; a thing given into your hand henceforth to have and to hold. Comprehensible, not a mass that both your arms cannot get round; tenable, not a confused pebble heap of which you can only lift one pebble at a time.

“Lipped softly”—full of kindness and comfort: the Keats line indeed the perpetual message of it—“For ever shalt thou love, and she be fair.” All beautiful fiction is of the Madonna, whether the Virgin of Athens or of Judah—Pan-Athenaic always.

And all foul fiction is *leze majesté* to the Madonna and to womanhood. For indeed the great fiction of every human life is the shaping of its Love, with due prudence, due imagination, due persistence and perfection from the beginning of its story to the end; for every human soul, its Palladium. And it follows that all right imaginative work is beautiful, which is a practical and brief law concerning it. All frightful things are either foolish, or sick, visits of frenzy, or pollutions of plague.

Taking thus the Greek vase at its best time, for the symbol of fair fiction : of foul, you may find in the great entrance-room of the Louvre, filled with the luxurious *orfèvrerie* of the sixteenth century, types perfect and innumerable : Satyrs carved in serpentine, Gorgons platted in gold, Furies with eyes of ruby, Scyllas with scales of pearl ; infinitely worthless toil, infinitely witless wickedness ; pleasure satiated into idiocy, passion provoked into madness, no object of thought, or sight, or fancy, but horror, mutilation, distortion, corruption, agony of war, insolence of disgrace, and misery of Death.—*Fiction Fair and Foul*, V. (*O. R.*, II., § 100–102).

61. FAIRY TALES.—In the best stories recently written for the young, there is a taint which it is not easy to define, but which inevitably follows on the author's addressing himself to children bred in school-rooms and drawing-rooms, instead of fields and woods—children whose favourite amusements are premature imitations of the vanities of elder people, and whose conceptions of beauty are dependent partly on costliness of dress. The fairies who interfere in the fortunes of these little ones are apt to be resplendent chiefly in millinery and satin slippers, and appalling more by their airs than their enchantments.

The fine satire, which, gleaming through every playful word, renders some of these recent stories

as attractive to the old as to the young, seems to me no less to unfit them for their proper function. Children should laugh, but not mock ; and when they laugh, it should not be at the weaknesses and the faults of others. They should be taught, as far as they are permitted to concern themselves with the characters of those around them, to seek faithfully for good, not to lie in wait maliciously to make themselves merry with evil : they should be too painfully sensitive to wrong to smile at it ; and too modest to constitute themselves its judges.

With these minor errors a far graver one is involved. As the simplicity of the sense of beauty has been lost in recent tales for children, so also the simplicity of their conception of love. That word which, in the heart of a child, should represent the most constant and vital part of its being ; which ought to be the sign of the most solemn thoughts that inform its awakening soul and, in one wide mystery of pure sunrise, should flood the zenith of its heaven, and gleam on the dew at its feet ; this word, which should be consecrated on its lips, together with the Name which it may not take in vain, and whose meaning should soften and animate every emotion through which the inferior things and the feeble creatures, set beneath it in its narrow world, are revealed to its curiosity or companionship ; this word, in modern child-story, is too often restrained and darkened into the hieroglyph of an evil mystery, troubling

the sweet peace of youth with premature gleams of uncomprehended passion, and flitting shadows of unrecognised sin.

These great faults in the spirit of recent child-fiction are connected with a parallel folly of purpose. Parents who are too indolent and self-indulgent to form their children's characters by wholesome discipline, or in their own habits and principles of life are conscious of setting before them no faultless example, vainly endeavour to substitute the persuasive influence of moral precept, intruded in the guise of amusement, for the strength of moral habit compelled by righteous authority:—vainly think to inform the heart of infancy with deliberative wisdom, while they abdicate the guardianship of its unquestioning innocence; and warp into the agonies of an immature philosophy of conscience the once fearless strength of its unsullied and unhesitating virtue.

A child should not need to choose between right and wrong. It should not be capable of wrong; it should not conceive of wrong. Obedient, as bark to helm, not by sudden strain or effort, but in the freedom of its bright course of constant life; true, with an undistinguished, praiseless, unboastful truth, in a crystalline household world of truth; gentle, through daily entreatings of gentleness, and honourable trusts, and pretty prides of child-fellowship in offices of good; strong, not in bitter and doubtful contest with temptation,

but in peace of heart, and armour of habitual right, from which temptation falls like thawing hail; self-commanding, not in sick restraint of mean appetites and covetous thoughts, but in vital joy of unluxurious life, and contentment in narrow possession, wisely esteemed.

Children so trained have no need of moral fairy tales; but they will find in the apparently vain and fitful courses of any tradition of old time, honestly delivered to them, a teaching for which no other can be substituted, and of which the power cannot be measured; animating for them the material world with inextinguishable life, fortifying them against the glacial cold of selfish science, and preparing them submissively, and with no bitterness of astonishment, to behold, in later years, the mystery—divinely appointed to remain such to all human thought—of the fates that happen alike to the evil and the good.—*Preface to "Grimm"* (*O. R.*, II., § 125-127).

62. STUDY.—What the best wisdom of the Serpent may be, I assume that you all possess;—and my caution is to be addressed to you in that brightly serpentine perfection. In all other respects as wise, in one respect let me beg you to be wiser than the Serpent, and not to eat your meat without tasting it,—meat of any sort, but above all the serpent-recommended meat of knowledge. Think what a delicate and delightful

meat that used to be in old days, when it was not quite so common as it is now, and when young people—the best sort of them—really hungered and thirsted for it. *Then* a youth went up to Cambridge, or Padua, or Bonn, as to a feast of fat things, of wines on the lees, well-refined. But now, he goes only to swallow,—and, more's the pity, not even to swallow as a glutton does, with enjoyment; not even—forgive me the old Aristotelian Greek, ἡδόμενος τῇ ἀφῇ—pleased with the going down, but in the saddest and exactest way, as a constrictor does, tasting nothing all the time. You remember what Professor Huxley told you—most interesting it was, and new to me—of the way the great boa does not in any true sense swallow, but only hitches himself on to his meat like a coal-sack;—well, that's the exact way you expect your poor modern student to hitch himself on to *his* meat, catching and notching his teeth into it, and dragging the skin of him tight over it,—till at last—you know I told you a little ago our artists didn't know a snake from a sausage,—but, Heaven help us, your University doctors are going on at such a rate that it will be all we can do, soon, to know a *man* from a sausage.

Then think again, in old times what a delicious thing a book used to be in a chimney corner, or in the garden, or in the fields, where one used really to read a book, and nibble a nice bit here

and there if it was a bride-cake sort of book, and cut oneself a lovely slice—fat and lean—if it was a round-of-beef sort of book. But what do you do with a book now, be it ever so good? You give it to a reviewer, first to skin it, and then to bone it, and then to chew it, and then to lick it, and then to give it you down your throat like a handful of pilau. And when you've got it, you've no relish for it, after all. And, alas! this continually increasing deadness to the pleasures of literature leaves your minds, even in their most conscientious action, sensitive with agony to the sting of vanity, and at the mercy of the meanest temptations held out by the competition of the schools. How often do I receive letters from young men of sense and genius, lamenting the loss of their strength, and waste of their time, but ending always with the same saying, "I *must* take as high a class as I can, in order to please my father." And the fathers love the lads all the time, but yet, in every word they speak to them, prick the poison of the asp into their young blood, and sicken their eyes with blindness to all the true joys, the true aims, and the true praises of science and literature; neither do they themselves any more conceive what was once the faith of Englishmen; that the only path of honour is that of rectitude, and the only place of honour, the one that you are fit for. Make your children happy in their youth; let distinction

come to them, if it will, after well-spent and well remembered years ; but let them now break and eat the bread of Heaven with gladness and singleness of heart, and send portions to them for whom nothing is prepared ;—and so Heaven send you its grace—before meat, and after it.—*Deucalion*, II. I., § 55, 56.

63. THE LOCOMOTIVE.—I cannot express the amazed awe, the crushed humility, with which I sometimes watch a locomotive take its breath at a railway station, and think what work there is in its bars and wheels, and what manner of men they must be who dig brown iron-stone out of the ground, and forge it into THAT ! What assemblage of accurate and mighty faculties in them ; more than fleshly power over melting crag and coiling fire, fettered, and finessed at last into the precision of watch-making ; Titanian hammer-strokes beating, out of lava, these glittering cylinders and timely-respondent valves, and fine ribbed rods, which touch each other as a serpent writhes, in noiseless gliding, and omnipotence of grasp ; infinitely complex anatomy of active steel, compared with which the skeleton of a living creature would seem, to a careless observer, clumsy and vile—a mere morbid secretion and phosphatous prop of flesh ! What would the men who thought out this—who beat it out, who touched it into its polished calm of power, who

set it to its appointed task, and triumphantly saw it fulfil this task to the utmost of their will—feel or think about this weak hand of mine, timidly leading a little stain of water-colour, which I cannot manage, into an imperfect shadow of something else—mere failure in every motion, and endless disappointment; what, I repeat, would the Iron-dominant Genii think of me, and what ought I to think of them.

But as I reach this point of reverence, the unreasonable thing is sure to give a shriek as of a thousand unanimous vultures, which leaves me shuddering in real physical pain for some half minute following; and assures me, during slow recovery, that a people which can endure such fluting and piping among them is not likely soon to have its modest ear pleased by aught of oaten stop, or pastoral song. Perhaps I am then led on into meditation respecting the spiritual nature of the Tenth Muse, who invented this gracious instrument, and guides its modulation by stokers' fingers; meditation, also, as to the influence of her invention amidst the other parts of the Parnasian melody of English education. Then it cannot but occur to me to inquire how far this modern "pneuma," Steam, may be connected with other pneumatic powers talked of in that old religious literature, of which we fight so fiercely to keep the letters bright, and the working valves, so to speak, in good order (while we let the steam

of it all carefully off into the cold condenser), what connection, I say, this modern "spiritus," in its valve-directed inspiration, has with that more ancient spiritus, or warm breath, which people used to think they might be "born of." Whether, in fine, there be any such thing as an entirely human Art, with spiritual motive power, and signal as of human voice, distinct inherently from this mechanical Art, with its mechanical motive force, and signal of vulture voice. For after all, this shrieking thing, whatever the fine make of it may be, can but pull or push, and do oxen's work in an impetuous manner. That proud king of Assyria, who lost his reason, and ate oxen's food, would he have much more cause for pride, if he had been allowed to spend his reason in doing oxen's work?—*Cestus of Aglaia*, I. (*O. R.*, I., § 324, 325).

64. EYES AND MICROSCOPES.—Flowers, like everything else that is lovely in the visible world, are only to be seen rightly with the eyes which the God who made them gave us; and neither with microscopes nor spectacles. These have their uses for the curious and the aged; as stilts and crutches have for people who want to walk in mud, or cannot safely walk but on three legs anywhere. But in health of mind and body, men should see with their own eyes, hear and speak without trumpets, walk on their feet, not on wheels,

and work and war with their arms, not with engine-beams, nor rifles warranted to kill twenty men at a shot before you can see them. The use of the great mechanical powers may indeed sometimes be compatible with the due exercise of our own; but the use of instruments for exaggerating the powers of sight necessarily deprives us of the best pleasures of sight. A flower is to be watched as it grows, in its association with the earth, the air, and the dew; its leaves are to be seen as they expand in sunshine; its colours, as they embroider the field, or illumine the forest. Dissect or magnify them, and all you discover or learn at last will be that oaks, roses, and daisies, are all made of fibres and bubbles; and these again, of charcoal and water; but, for all their peeping and probing, nobody knows how.—*Præterita*, II. x.

65. MORE HASTE, LESS SPEED.—Among the losses, all the more fatal in being unfelt, brought upon us by the fury and vulgarity of modern life, I count for one of the saddest, the loss of the wish to gather a flower in travelling. The other day,—whether indeed a sign of some dawning of doubt and remorse in the public mind, as to the perfect jubilee of railroad journey, or merely a piece of the common daily flattery on which the power of the British press first depends, I cannot judge;—but, for one or other of such motives, I saw lately in some illustrated paper, a pictorial comparison

of old-fashioned and modern travel, representing, as the type of things passed away, the outside passengers of the mail shrinking into huddled and silent distress from the swirl of a winter snowstorm; and for type of the present Elysian dispensation, the inside of a first-class saloon carriage, with a beautiful young lady in the last pattern of Parisian travelling dress, conversing, Daily news in hand, with a young officer—her fortunate vis-à-vis—on the subject of our military successes in Afghanistan and Zululand.

I will not, in presenting—it must not be called, the other side, but the supplementary, and wilfully omitted, facts, of this ideal,—oppose, as I fairly might, the discomforts of a modern cheap excursion train, to the chariot-and-four, with out-riders and courier, of ancient noblesse. I will compare only the actual facts, in the former and in latter years, of my own journey from Paris to Geneva.

As matters are now arranged, I find myself, at half-past eight in the evening, waiting in a confused crowd with which I am presently to contend for a seat, in the dim light and cigar-stench of the great station of the Lyons line. Making slow way through the hostilities of the platform, in partly real, partly weak politeness, as may be, I find the corner seats of course already full of prohibitory cloaks and umbrellas; but manage to get a middle back one; the net overhead is

already surcharged with a bulging extra pormanteau, so that I squeeze my desk as well as I can between my legs, and arrange what wraps I have about my knees and shoulders. Follow a couple of hours of simple patience, with nothing to entertain one's thoughts but the steady roar of the line under the wheels, the blinking and dripping of the oil lantern, and the more or less ungainly wretchedness, and variously sullen compromises and encroachments of posture, among the five other passengers preparing themselves for sleep: the last arrangement for the night being to shut up both windows, in order to effect, with our six breaths, a salutary modification of the night air.

The banging and bumping of the carriages over the turn-tables wakes me up as I am beginning to doze, at Fontainebleau, and again at Sens; and the trilling and thrilling of the little telegraph bell establishes itself in my ears, and stays there, trilling me at last into a shivering, suspicious sort of sleep, which, with a few vaguely fretful shrugs and fidgets, carries me as far as Tonnerre, where the "quinze minutes d'arrêt" revolutionise everything; and I get a turn or two on the platform, and perhaps a glimpse of the stars, with promise of a clear morning; and so generally keep awake past Mont Bard, remembering the happy walks one used to have on the terrace under Buffon's tower, and thence watching, if perchance, from the mouth of the high

tunnel, any film of moonlight may show the far undulating masses of the hills of Côteaux. But most likely one knows the place where the great old view used to be only by the sensible quickening of the pace as the train turns down the incline, and crashes through the trenched cliffs into the confusion and high clattering vault of the station at Dijon.

And as my journey is almost always in the spring-time, the twisted spire of the cathedral usually shows itself against the first gray of dawn, as we run out again southwards; and resolving to watch the sunrise, I fall more complacently asleep,—and the sun is really up by the time one has to change carriages, and get morning coffee at Mâcon. And from Amberieux, through the Jura valley, one is more or less feverishly happy and thankful, not so much for being in sight of Mont Blanc again, as in having got through the nasty and gloomy night journey; and then the sight of the Rhone and the Salève seems only like a dream, presently to end in nothingness; till, covered with dust, and feeling as if one never should be fit for anything any more, one staggers down the hill to the Hotel des Bergues, and sees the dirtied Rhone, with its new iron bridge, and the smoke of a new factory exactly dividing the line of the aiguilles of Chamouni.—*Proserpina*, II. IV., § 2-5.

66. OLD-FASHIONED TRAVELLING.—The poor modern slaves and simpletons, who let themselves be dragged like cattle, or felled timber, through the countries they imagine themselves visiting, can have no conception whatever of the complex joys, and ingenious hopes, connected with the choice and arrangement of the travelling carriage in old time. The mechanical questions first, of strength—easy rolling,—steady and safe poise of persons and luggage; the general stateliness of effect to be obtained for the abashing of plebeian beholders; the cunning design and distribution of store-cellars under the seats, secret drawers under front windows, invisible pockets under padded lining, safe from dust, and accessible only by insidious slits, or necromantic valves like Aladdin's trap-door; the fitting of cushions where they would not slip, the rounding of corners for more delicate repose; the prudent attachments and springs of blinds; the perfect fitting of windows, on which one-half the comfort of a travelling carriage really depends; and the adaptation of all these concentrated luxuries to the probabilities of who would sit where, in the little apartment which was to be virtually one's home for five or six months;—all this was an imaginary journey in itself, with every pleasure and none of the discomfort, of practical travelling. . . .

For a family carriage of this solid construction, with its luggage, and load of six or more persons,

four horses were of course necessary to get any sufficient way on it; and half-a-dozen such teams were kept at every post-house. The modern reader may perhaps have as much difficulty in realising these savagely and clumsily locomotive periods, though so recent, as any aspects of migratory Saxon or Goth; and may not think me vainly garrulous in their description.

The French horses, and more or less those on all the great lines of European travelling, were properly stout trotting cart-horses, well up to their work and over it; untrimmed, long-tailed, good-humouredly licentious, whinnying and frolicking with each other when they had a chance; sagaciously steady to their work; obedient to the voice mostly, to the rein only for more explicitness; never touched by the whip, which was used merely to express the driver's exultation in himself and them,—signal obstructive vehicles in front out of the way, and advise all the inhabitants of the villages and towns traversed on the day's journey, that persons of distinction were honouring them by their transitory presence. If everything was right, the four horses were driven by one postilion riding the shaft horse; but if the horses were young, or the riders unpractised, there was a postilion for the leaders also. As a rule, there were four steady horses and a good driver, rarely drunk, often very young, the men of stronger build being

more useful for other work, and any clever young rider able to manage the well-trained and merry-minded beasts, besides being lighter on their backs. Half the weight of the cavalier, in such cases, was in his boots, which were often brought out slung from the saddle like two buckets, the postilion, after the horses were harnessed, walking along the pole and getting into them.

Scarcely less official, for a travelling carriage of good class, than its postilions, was the courier, or properly, *avant-courier*, whose primary office it was to ride in advance at a steady gallop, and order the horses at each post-house to be harnessed and ready waiting, so that no time might be lost between stages. His higher function was to make all bargains and pay all bills, so as to save the family unbecoming cares and mean anxieties, besides the trouble and disgrace of trying to speak French or any other foreign language. He, farther, knew the good inns in each town, and all the good rooms in each inn, so that he could write beforehand to secure those suited to his family. He was also, if an intelligent man and high-class courier, well acquainted with the proper sights to be seen in each town, and with all the occult means to be used for getting sight of those that weren't to be seen by the vulgar. Murray, the reader will remember, did not exist in those days; the courier was a private Murray, who knew, if he had any wit, not

the things to be seen only, but those you would yourself best like to see, and gave instructions to your valet-de-place accordingly, interfering only as a higher power in cases of difficulty needing to be overcome by money or tact. He invariably attended the ladies in their shopping expeditions, took them to the fashionable shops, and arranged as he thought proper the prices of articles. Lastly, he knew, of course, all the other high-class couriers on the road, and told you, if you wished to know, all the people of consideration who chanced to be with you in the inn.—*Præterita*, I. VI.

Thus, leaving Paris in the bright spring morning, when the Seine glittered gaily at Charenton, and the arbres de Judée were mere pyramids of purple bloom round Villeneuve-St.-Georges, one had an afternoon walk among the rocks of Fontainebleau, and next day we got early into Sens, for new lessons in its cathedral aisles, and the first saunter among the budding vines of the coteaux. The next day brought us to the oolite limestones at Mont Bard, and we always spent the Sunday at the Bell in Dijon. Monday, the drive of drives, through the village of Genlis, the fortress of Auxonne, and up the hill to the vine-surrounded town of Dole; whence, behold at last the limitless ranges of Jura, south and north, beyond the woody plain, and above them the “Derniers Rochers” and the white square-set summit, worshipped ever anew. Then at Poligny, the same afternoon, we

gathered the first milkwort for that year ; and on Tuesday, at St. Laurent, the wild lily of the valley ; and on Wednesday, at Morez, gentians.

And on Thursday, the *eighth or ninth* day from Paris, days all spent patiently and well, one saw from the gained height of Jura, the great Alps unfold themselves in their chains and wreaths of incredible crest and cloud.—*Proserpina*, II. IV., § 7.

67. THE OLD JURA ROAD.—The village, or rural town, of Poligny, clustered out of well-built old stone houses, with gardens and orchards ; and gathering at the midst of it into some pretence or manner of a street, straggles along the roots of Jura, at the opening of a little valley, which in Yorkshire or Derbyshire limestone would have been a gorge between nodding cliffs, with a pretty pattering stream at the bottom : but in Jura, is a far retiring theatre of rising terraces, with bits of field and garden getting foot on them at various heights ; a spiry convent in its hollow, and well-built little nests of husbandry-building set in corners of meadow, and on juts of rock ; no stream, to speak of, nor springs in it, nor the smallest conceivable reason for its being there, but that God made it.

“ Far ” retiring, I said,—perhaps a mile into the hills from the outer plain, by half a mile across, permitting the main road from Paris to Geneva to serpentine and zigzag capriciously up the cliff

terraces with innocent engineering, finding itself every now and then where it had no notion of getting to, and looking, in a circumflex of puzzled level, where it was to go next ;—retrospect of the plain of Burgundy enlarging under its backward sweeps, till at last, under a broken bit of steep final crag, it got quite up the side, and out over the edge of the ravine, where said ravine closes as unreasonably as it had opened, and the surprised traveller finds himself, magically as if he were Jack of the Beanstalk, in a new plain of an upper world. A world of level rock, breaking at the surface into yellow soil, capable of scanty, but healthy turf, and sprinkled copse and thicket ; with here and there, beyond, a blue surge of pines, and over those, if the evening or morning were clear, always one small bright silvery likeness of a cloud.

These first tracts of Jura differ in many pleasant ways from the limestone levels round Ingleborough, which are their English types. The Yorkshire moors are mostly by a hundred or two feet higher, and exposed to drift of rain under violent, nearly constant, wind. They break into wide fields of loose blocks, and rugged slopes of shale ; and are mixed with sands and clay from the millstone grit, which nourish rank grass, and lodge in occasional morass : the wild winds also forbidding any vestige or comfort of tree, except here and there in a sheltered nook of new

plantation. But the Jura sky is as calm and clear as that of the rest of France; if the day is bright on the plain, the bounding hills are bright also; the Jura rock, balanced in the make of it between chalk and marble, weathers indeed into curious rifts and furrows, but rarely breaks loose, and has long ago clothed itself either with forest flowers, or with sweet short grass, and all blossoms that love sunshine. The pure air, even on this lower ledge of a thousand feet above sea, cherishes their sweetest scents and liveliest colours, and the winter gives them rest under thawless serenity of snow.

A still greater and stranger difference exists in the system of streams. For all their losing themselves, and hiding, and intermitting, their presence is distinctly felt on a Yorkshire moor; one sees the places they have been in yesterday, the wells where they will flow after the next shower; and a tricklet here at the bottom of a crag, or a tinkle there from the top of it, is always making one think whether this is one of the sources of Aire, or rootlets of Ribble, or beginnings of Bolton Strid, or threads of silver which are to be spun into Tees.

But no whisper, nor murmur, nor patter, nor song, of streamlet disturbs the enchanted silence of open Jura. The rain-cloud clasps her cliffs, and floats along her fields; it passes, and in an hour the rocks are dry, and only beads of dew left in

the Alchemilla leaves,—but of rivulet, or brook,—no vestige yesterday, or to-day, or to-morrow. Through unseen fissures and filmy crannies the waters of cliff and plain have alike vanished, only far down in the depths of the main valley glides the strong river, unconscious of change.—*Præterita*, I. IX.

68. EDUCATION IN TRAVEL.—Believe me, gentlemen, your power of seeing mountains cannot be developed either by your vanity, your curiosity, or your love of muscular exercise. It depends on the cultivation of the instrument of sight itself, and of the soul that uses it. As soon as you can see mountains rightly, you will see hills also, and valleys, with considerable interest; and a great many other things in Switzerland with which you are at present but poorly acquainted. The bluntness of your present capacity of ocular sensation is too surely proved by your being unable to enjoy any of the sweet lowland country, which is incomparably more beautiful than the summits of the central range, and which is meant to detain you, also, by displaying—if you have patience to observe them—the loveliest aspects of that central range itself, in its real majesty of proportion, and mystery of power.

For, gentlemen, little as you may think it, you can no more see the Alps from the Col du Géant,

or the top of the Matterhorn, than the pastoral scenery of Switzerland from the railroad carriage. If you want to see the skeletons of the Alps, you may go to Zermatt or Chamouni; but if you want to see the body and soul of the Alps, you must stay awhile among the Jura, and in the Bernese plain. And, in general, the way to see mountains is to take a knapsack and a walking-stick; leave alpenstocks to be flourished in each other's faces, and between one another's legs, by Cook's tourists; and try to find some companionship in yourself with yourself; and not to be dependent for your good cheer either on the gossip of the table-d'hôte, or the hail-fellow and well met, hearty though it be, of even the pleasantest of celebrated guides.—*Deucalion*, I. I., § 4, 5.

69. THE SLOTH AND THE SQUIRREL.—Of all known quadrupeds, the unhappiest and vilest, yet alive, is the Sloth, having this farther strange devilry in him, that what activity he is capable of, is in storm, and in the night. Well, the devil takes up this creature, and makes a monster of it,—gives it legs as big as hogsheads, claws stretched like the roots of a tree, shoulders like a hump of crag, and a skull as thick as a paving-stone. From this nightmare monster he takes what poor faculty of motion the creature, though wretched, has in its minuter size; and shows you, instead of the clinging climber that scratched

and scrambled from branch to branch among the rattling trees as they bowed in storm, only a vast heap of stony bones and staggering clay, that drags its meat down to its mouth out of the forest ruin. This creature the fiends delight to exhibit to you, but are permitted by the nobler powers only to exhibit to you in its death.

On the other hand, as of all quadrupeds there is none so ugly or so miserable as the sloth, so, take him for all in all, there is none so beautiful, so happy, so wonderful, as the squirrel. Innocent in all his ways, harmless in his food, playful as a kitten, but without cruelty, and surpassing the fantastic dexterity of the monkey, with the grace and the brightness of a bird, the little dark-eyed miracle of the forest glances from branch to branch more like a sunbeam than a living creature: it leaps, and darts, and twines, where it will;—a chamois is slow to it; and a panther clumsy: grotesque as a gnome, gentle as a fairy, delicate as the silken plumes of the rush, beautiful and strong like the spiral of a fern,—it haunts you, listens for you, hides from you, looks for you, loves you, as if the angel that walks with your children had made it himself for their heavenly plaything.

And this is what *you* do, to thwart alike your child's angel, and his God,—you take him out of the woods into the town,—you send him from modest labour to competitive schooling,—you force him out of the fresh air into the dusty

bone-house,—you show him the skeleton of the dead monster, and make him pore over its rotten cells and wire-stitched joints, and vile extinct capacities of destruction,—and when he is choked and sickened with useless horror and putrid air, you let him—regretting the waste of time—go out for once to play again by the woodside ;—and the first squirrel he sees, he throws a stone at !

Carry, then, I beseech you, this assured truth away with you to-night. All true science begins in the love, not the dissection, of your fellow-creatures ; and it ends in the love, not the analysis, of God. Your alphabet of science is in the nearest knowledge, as your alphabet of religion is in the nearest duty. “ Behold, it is nigh thee, even at the doors.” The Spirit of God is around you, in the air that you breathe,—His glory in the light that you see ; and in the fruitfulness of the earth, and the joy of its creatures, He has written for you, day by day, His revelation, as He has granted you, day by day, your daily bread.—*Deuc.*, I. XII., § 39, 40.

70. EDUCATIONAL AIMS.—Did you ever hear of anything else so ill-named as the phantom called the “ Philosopher’s Stone ” ? A talisman that shall turn base metal into precious metal, nature acknowledges not ; nor would any but fools seek after it. But a talisman to turn base souls into noble souls, nature has given us ! and that is a

"Philosopher's Stone" indeed, but it is a stone which the builders refuse.

If there were two valleys in California or Australia, with two different kinds of gravel in the bottom of them; and in the one stream bed you could dig up, occasionally and by good fortune, nuggets of gold; and in the other stream bed, certainly and without hazard, you could dig up little caskets, containing talismans which gave length of days and peace; and alabaster vases of precious balms, which were better than the Arabian Dervish's ointment, and made not only the eyes to see, but the mind to know, whatever it would—I wonder in which of the stream beds there would be most diggers?

"Time is money"—so say your practised merchants ^{and} ~~and~~ ^{economists}. None of them, however, I fancy, as they draw towards death, find that the reverse is true, and that "money is time"? Perhaps it might be better for them, in the end, if they did not turn so much of their time into money, lest, perchance, they also turn Eternity into it! There are other things, however, which in the same sense are money, or can be changed into it, as well as time. Health is money, wit is money, knowledge is money; and all your health, and wit, and knowledge may be changed for gold; and the happy goal so reached, of a sick, insane, and blind, auriferous old age; but the gold cannot be changed in its turn back into health and wit.

"Time is money ;" the words tingle in my ears so that I can't go on writing. Is it nothing better, then ? If we could thoroughly understand that time was—*itself*,—would it not be more to the purpose ? A thing of which loss or gain was absolute loss, and perfect gain. And that it was expedient also to buy health and knowledge with money, if so purchaseable ; but not to buy money with *them* ?

And purchaseable they are at the beginning of life, though not at its close. Purchaseable, always, for others, if not for ourselves. You can buy, and cheaply, life, endless life, according to your Christian's creed—(there's a bargain for you !) but—long years of knowledge, and peace, and power, and happiness of love—these assuredly and irrespectively of any creed or breathen,—for all those desolate and haggard children about your streets.

"That is not political economy, however." Pardon me ; the all-comfortable saying, "What he layeth out, it shall be paid him again," is quite literally true in matters of education ; no money seed can be sown with so sure and large return at harvest-time as that ; only of this money-seed, more than of flesh-seed, it is utterly true, "That which thou sowest is not quickened except it *die*." You must forget your money, and every other material interest, and educate for education's sake only ! or the very good you try to bestow will

become venomous, and that and your money will be lost together.

And this has been the real cause of failure in our efforts for education hitherto—whether from above or below. There is no honest desire for the thing itself. The cry for it among the lower orders is because they think that, when once they have got it, they must become upper orders. There is a strange notion in the mob's mind now-a-days (including all our popular economists and educators, as we most justly may, under that brief term "mob"), that *everybody* can be uppermost; or at least, that a state of general scramble, in which everybody in his turn should come to the top, is a proper Utopian constitution; and that, once give every lad a good education, and he cannot but come to ride in his carriage (the methods of supply of coachmen and footmen not being contemplated). And very sternly I say to you—and say from sure knowledge—that a man had better not know how to read and write, than receive education on such terms.

The first condition under which it can be given usefully is, that it should be clearly understood to be no means of getting on in the world, but a means of staying pleasantly in your place there. And the first elements of State education should be calculated equally for the advantage of every order of person composing the State. From the lowest to the highest class, every child born in

this island should be required by law to receive these general elements of human discipline, and to be baptized—not with a drop of water on its forehead—but in the cloud and sea of heavenly wisdom and of earthly power.

And the elements of this general State education should be briefly these :

First—The body must be made as beautiful and perfect in its youth as it can be, wholly irrespective of ulterior purpose. If you mean afterwards to set the creature to business which will degrade its body and shorten its life, first, I should say, simply,—you had better let such business alone ;—but if you must have it done, somehow, yet let the living creature, whom you mean to kill, get the full strength of its body first, and taste the joy, and bear the beauty of youth. After that, poison it, if you will. Economically, the arrangement is a wiser one, for it will take longer in the killing than if you began with it younger ; and you will get an excess of work out of it which will more than pay for its training.

Therefore, first teach the Laws of Health, and exercises enjoined by them ; and, to this end, your schools must be in fresh country, and amidst fresh air, and have great extents of land attached to them in permanent estate. Riding, running, all the honest, personal exercises of offence and defence, and music, should be the primal heads of this bodily education.

Next to these bodily accomplishments, the two great mental graces should be taught, Reverence and Compassion: not that these are in a literal sense to be "taught," for they are innate in every well-born human creature, but they have to be developed exactly as the strength of the body must be, by deliberate and constant exercise. I never understood why Goethe (in the plan of education in "*Wilhelm Meister*") says that reverence is not innate, but must be taught from without; it seems to me so fixedly a function of the human spirit, that if men can get nothing else to reverence they will worship a fool, or a stone, or a vegetable.* But to teach reverence rightly is to attach it to the right persons and things; first, by setting over your youth masters whom they cannot but love and respect; next, by gathering for them, out of past history, whatever has been most worthy in human deeds and human passion; and leading them continually to dwell upon such instances, making this the principal element of emotional excitement to them; and, lastly, by letting them justly feel, as far as may be, the smallness of their own powers and knowledge, as compared with the attainments of others.

Compassion, on the other hand, is to be taught chiefly by making it a point of honour, collaterally

* By steady preaching against it, one may quench reverence, and bring insolence to its height; but the instinct cannot be wholly uprooted.

with courage, and in the same rank (as indeed the complement and evidence of courage), so that, in the code of unwritten school law, it shall be held as shameful to have done a cruel thing as a cowardly one. All infliction of pain on weaker creatures is to be stigmatised as unmanly crime; and every possible opportunity taken to exercise the youths in offices of some practical help, and to acquaint them with the realities of the distress which, in the joyfulness of entering into life, it is so difficult, for those who have not seen home suffering, to conceive.

Reverence, then, and compassion, we are to teach primarily, and with these, as the bond and guardian of them, truth of spirit and word, of thought and sight. Truth, earnest and passionate, sought for like a treasure, and kept like a crown.

This teaching of truth as a habit will be the chief work the master has to do; and it will enter into all parts of education. First, you must accustom the children to close accuracy of statement; this both as a principle of honour, and as an accomplishment of language, making them try always who shall speak truest, both as regards the fact he has to relate or express (not concealing or exaggerating), and as regards the precision of the words he expresses it in, thus making truth (which, indeed, it is) the test of perfect language, and giving the intensity of a moral purpose to the study and art of words:

then carrying this accuracy into all habits of thought and observation also, so as always to *think* of things as they truly are, and to *see* them as they truly are, as far as in us rests. And it does rest much in our power, for all false thoughts and secings come mainly of our thinking of what we have no business with, and looking for things we want to see, instead of things that ought to be seen.

“Do not talk but of what you know ; do not think but of what you have materials to think justly upon ; and do not look for things only that you like, when there are others to be seen”—this is the lesson to be taught to our youth, and inbred in them ; and that mainly by our own example and continence. Never teach a child anything of which you are not yourself sure ; and, above all, if you feel anxious to force anything into its mind in tender years, that the virtue of youth and early association may fasten it there, be sure it is no lie which you thus sanctify. There is always more to be taught of absolute, incontrovertible knowledge, open to its capacity, than any child can learn ; there is no need to teach it anything doubtful. Better that it should be ignorant of a thousand truths, then have consecrated in its heart a single lie.

And for this, as well as for many other reasons, the principal subjects of education, after history, ought to be natural science and mathematics ;

but with respect to these studies, your schools will require to be divided into three groups: one for children who will probably have to live in cities, one for those who will live in the country, and one for those who will live at sea; the schools for these last, of course, being always placed on the coast. And for children whose life is to be in cities, the subjects of study should be, as far as their disposition will allow of it, mathematics and the arts; for children who are to live in the country, natural history of birds, insects, and plants, together with agriculture taught practically; and for children who are to be seamen, physical geography, astronomy, and the natural history of sea fish and sea birds.—*T. and T.*, XVI., § 88–100.

71. EDUCATIONAL STIMULUS.—Further, of schools in all places, and for all ages, the healthy working will depend on the total exclusion of the stimulus of competition in any form or disguise. Every child should be measured by its own standard, trained to its own duty, and rewarded by its just praise. It is the *effort* that deserves praise, not the success; nor is it a question for any student whether he is cleverer than others or duller, but whether he has done the best he could with the gifts he has. The madness of the modern cram and examination system arises principally out of the struggle to get lucrative

places; but partly also out of the radical block-headism of supposing that all men are naturally equal, and can only make their way by elbowing;—the facts being that every child is born with an accurately defined and absolutely limited capacity; that he is naturally (if able at all) able for some things and unable for others; that no effort and no teaching can add one particle to the granted ounces of his available brains; that by competition he may paralyse or pervert his faculties, but cannot stretch them a line; and that the entire of his happiness, and virtue of his contentment in doing what he is doing, in staying where he is, peace of mind, regards the less or more capacity. His superiorities are to be used for his own pre-eminence; and his inferiorities find no ground of mortification, but of pleasure and admiration of nobler powers. It is to express the quantity of delight I use the power of Turner and Tintoret, when it was nascent only; and all good artists are to be content that there is far less personal pleasure in drawing a thing beautifully than in seeing it beautifully done. Therefore, over the door of every school, and the gate of every college, I would fain see engraved in their marble the absolute Forbidding—

“Let *nothing* be done through strife or vain glory:”

and I would have fixed for each age of children

and students a certain standard of pass in examination, so adapted to average capacity and power of exertion, that none need fail who had attended to their lessons and obeyed their masters; while its variety of trial should yet admit of the natural distinctions attaching to progress in especial subjects and skill in peculiar arts. Beyond such indication or acknowledgment of merit, there should be neither prizes nor honours; these are want by Heaven to be the proper rewards of a man's consistent and kindly life, not of a youth's exertion.

And, should the natural simplicity be disturbed by artificiality, argued by punishments. The lesson in every schoolmaster's mind to the effect—“You cannot make a silk purse of a sow's ear”—expanded with the farther scholium that of it will not be the least disguised diamond earring. If, in a woman, discretion be as a jewel of gold in a pig's ear, much more, in man, woman, or child, without discretion—the knowledge that a fool receives only to puff up his stomach, and sparkle in his cockscorn. In matters moral, most men are not intended to be any better than sheep and robins; so, in matters intellectual, most men are not intended to be any wiser than their cocks and bulls,—duly scientific of their yard and pasture, peacefully nescient of all beyond.

To be proud and strong, each in his place and work, is permitted and ordained to the simplest; but ultra,—ne sutor, ne fossor.

And it is in the wholesome indisposition of the average mind for intellectual labour that due provision is made for the quantity of dull work which must be done in stubbing the Thornaby wastes of the world. Modern Utopianism imagines that the world is to be stubbed by steam, and human arms and legs to be eternally idle; not perceiving that thus it would reduce man to the level of his cattle indeed, who can only graze and gore, but not dig! It is indeed certain that advancing knowledge will guide us to less painful methods of human toil; but in the true Utopia, man will rather harness himself, with his oxen, to his plough, than leave the devil to drive it.

The entire body of teaching throughout the series of "*Fors Clavigera*" is one steady assertion of the necessity that educated persons should share their thoughts with the uneducated, and take also a common part in their labours. But there is not a sentence implying that the education of all should be alike, or that there is to be no distinction of master from servant, or of scholar from clown. That education should be open to all, is as certain as that the sky should be; but, as certainly, it should be enforced on none, and benevolent Nature left to lead her children, whether men or beasts, to take or leave at their pleasure.

Bring horse and man to the water, let them drink if, and when, they will ;—the child who desires education will be bettered by it, the child who dislikes it, only disgraced.—*F. C.*, Letter 95.

72. EDUCATION AND CRIME.—Crime cannot be hindered by punishment ; it will always find some shape and outlet, unpunishable or unclosed. Crime can only be truly hindered by letting no man grow up a criminal—by taking away the *will* to commit sin ; not by mere punishment of its commission. Crime, small and great, can only be truly stayed by education—not the education of the intellect only, which is, on some men, wasted, and for others mischievous ; but education of the heart, which is alike good and necessary for all.—*T. and T.*, XV., § 86.

73. EDUCATIONAL INSTITUTIONS.—I continually see subscriptions of ten, fifteen, or twenty thousand pounds, for new churches. Now a good clergyman never wants a church. He can say all that his congregation essentially need to hear in any of his parishioners' best parlours, or upper chambers, or in the ball-room at the Nag's Head ; or if these are not large enough, in the market-place, or the harvest field. And until every soul in the parish is cared for, and saved from such sorrow of body or mind as alms can give comfort in, no clergyman, but in sin or heresy, can ask

for a church at all. What does he want with altars—was the Lord's Supper eaten on one? What with pews—unless rents for the pride of them? What with font and pulpit—that the next wayside brook, or mossy bank, cannot give him? The temple of Christ is in His people—His order, to feed them—His throne alike of audience and of judgment, in Heaven: were it otherwise, even the churches which we have already are not always open for prayer.

Far different is the need for definite edifice, perfect instrument, and favourable circumstance in the consistent education of the young.

In order to form wholesome habits in them, they must be placed under wholesome conditions. For the pursuit of any intellectual inquiry, to advantage, not only leisure must be granted them, but quiet. For the attainment of a high degree of excellence in art, it is necessary that the excellence of former art should be exhibited and recognised. For the attainment of high standard in moral character, it is necessary that weakness should be protected, and wilfulness restrained, by the daily vigilance and firmness of tutors and masters. The words school, college, university, rightly understood, imply the leisure necessary for learning, the companionship necessary for sympathy, and the reference of the education of the citizen to the general claims, progress and powers of his country. Every

has counted among its most honoured benefactors those who have founded its scholastic institutions in these three kinds ; but the founding of museums adapted for the general instruction and pleasure of the multitude, and especially the labouring multitude, seems to be in these days a farther necessity, to meet which the people themselves may be frankly called upon, and to supply which their own power is perfectly adequate, without waiting the accident or caprice of private philanthropy.—*Nature and Purposes of St. George's Guild.*

74. THE USE OF MUSEUMS.—A national museum is one thing, a national place of education another ; and the more sternly and unequivocally they are separated, the better will each perform its office—the one of treasuring, and the other of teaching. I heartily wish there were already, as one day there must be, large educational museums in every district of London, freely open every day, and well lighted and warmed at night, with all furniture of comfort, and full aids for the use of their contents by all classes. But you might just as rationally send the British public to the Tower 'to study mineralogy upon the Crown jewels as
 'ke the unique pieces of a worthy national col-
 ' (such as, owing mainly to the exertions of its
 ' officers, that of our British Museum has
 'ome,) the means of elementary public

instruction. After men have learnt their science or their art, at least so far as to know a common and a rare example in either, a national museum is useful, and ought to be easily accessible to them; but until then, unique or selected specimens in natural history are without interest to them, and the best art is as useless as a blank wall.—*Letter to the Times*, Jan. 27, 1866 (*A. C.*, I., p. 79).

75. HANDICRAFT TRAINING.—It would be part of my scheme of physical education that every youth in the state—from the King's son downwards,—should learn to do something finely and thoroughly with his hand, so as to let him know what *touch* meant; and what stout craftsmanship meant; and to inform him of many things besides, which no man can learn but by some severely accurate discipline in doing. Let him once learn to take a straight shaving off a plank, or draw a fine curve without faltering, or lay a brick level in its mortar; and he has learned a multitude of other matters which no lips of man could ever teach him. He might choose his craft, but whatever it was, he should learn it to some sufficient degree of true dexterity: and the result would be, in after life, that among the middle classes a good deal of their house furniture would be made, and a great deal of rough work, more or less clumsily, but ineffectively, got through, by the maker self and his sons, with much further

general health and peace of mind, and increase of innocent domestic pride and pleasure, and to the extinction of a great deal of vulgar upholstery and other mean handicraft.—*T. and T.*, XXI., § 133.

76. ABOUT GARDENING.—You are only a boy, or a girl. What can you do? Is there no garden near you where you can get from some generous person leave to weed the beds, or sweep up the dead leaves? (I once allowed an eager little girl of ten years old to weed my garden; and now, though it is long ago, she always speaks as if the favour had been done to *her*, and not to the garden and me.) Is there no dusty place that you can water?—if it be only the road before your door, the traveller will thank you. No roadside ditch that you can clean of its clogged rubbish, to let the water run clear? No scattered heap of brick-bats that you can make an orderly pile of? You are ashamed? Yes; that false shame is the Devil's pet weapon. He does more work with it even than with false pride. For with false pride, he only goads evil; but with false shame, paralyses good.

But you have no ground of your own; you are a girl, and can't work on other people's? At least you have a window of your own, or one which you have a part interest. With very help from the carpenter, you can arrange a outside of it, that will hold earth enough
nothing in. If you have any favour

from Fortune at all, you can train a rose, or a honeysuckle, or a convolvulus, or a nasturtium, round your window—a quiet branch of ivy—or if for the sake of its leaves only, a tendril or two of vine. Only, be sure all your plant-pets are kept well outside of the window. Don't come to having pots in the room, unless you are sick.

The primal object of your gardening, for yourself, is to keep you at work in the open air, whenever it is possible. The greenhouse will always be a refuge to you from the wind; which, on the contrary, you ought to be able to bear; and will tempt you into clippings and pottings and pettings, and mere standing dilettantism in a damp and over-scented room, instead of true labour in fresh air.

Secondly.—It will not only itself involve unnecessary expense—(for the greenhouse is sure to turn into a hot-house in the end; and even if not, is always having its panes broken, or its blinds going wrong, or its stands getting rickety;) but it will tempt you into buying nursery plants, and waste your time in anxiety about them.

Thirdly.—The use of your garden to the household ought to be mainly in the vegetables you can raise in it. And, for these, your proper observance of season, and of the authority of [†] stars, is a vital duty. Every climate give vegetable food to its living creatures at [†] time; your business is to know that

be prepared for it, and to take the healthy luxury which Nature appoints you, in the rare annual taste of the thing given in those its due days. The vile and gluttonous modern habit of forcing never allows people properly to taste anything.

Lastly, and chiefly.—Your garden is to enable you to obtain such knowledge of plants as you may best use in the country in which you live by communicating it to others ; and teaching them to take pleasure in the green herb, given for meat, and the coloured flower, given for joy. And your business is not to make the greenhouse or hot-house rejoice and blossom like the rose, but the wilderness and solitary place.—*F. C.*, Letter 46.

77. INFANCY
 education.—When do you suppose the
 it can on of a child begins ? At six months old
 with answer smile with smile, and impatience
 with impatience. It can observe, enjoy, and
 suffer, acutely, and, in a measure, intelligently.
 Do you suppose it makes no difference to it that
 the order of the house is perfect and quiet, the
 faces of its father and mother full of peace, their
 soft voices familiar to its ear, and even those of
 strangers, loving ; or that it is tossed from arm
 to arm, among hard, or reckless, or vain-minded
 persons, in the gloom of a vicious household, or
 confusion of a gay one ? The moral dis-
 is, I doubt not, greatly determined in
 speechless years. I believe especially

that quiet, and the withdrawal of objects likely to distract, by amusing, the child, so as to let it fix its attention undisturbed on every visible least thing in its domain, is essential to the formation of some of the best powers of thought.—*R. C.*, Letter 33.

78. THE IMAGINATION IN CHILDHOOD.—It is quite an inexorable law of this poor human nature of ours, that in the development of its healthy infancy, it is put by Heaven under the absolute necessity of using its imagination as well as its lungs and its legs;—that it is forced to develop its power of invention, as a bird its feathers of flight; that no toy you can bestow will supersede the pleasure it has in fancying something that isn't there; and the most instructive histories you can compile for it of the wonders of the world will never conquer the interest of the tale which a clever child can tell itself, concerning the shipwreck of a rose-leaf in the shallows of a rivulet.

One of the most curious proofs of the need to children of this exercise of the inventive and believing power,—the *besoin de croire*, which precedes the *besoin d'aimer*, you will find in the way you destroy the vitality of a toy to them, by bringing it too near the imitation of life. You never find a child make a pet of a mechanical rattle that runs about the floor—of a poodle that

—of a tumbler who jumps upon wires. The child falls in love with a quiet thing, with an ugly one—nay, it may be, with one, to us, totally devoid of meaning. My little—ever-so-many-times-grand—cousin, Lily, took a bit of stick with a round knob at the end of it for her doll one day;—nursed it through any number of illnesses with the most tender solicitude; and, on the deeply important occasion of its having a new night-gown made for it, bent down her mother's head to receive the confidential and timid whisper—"Mamma, perhaps it had better have no sleeves, because, as Bibsey has no arms, she mightn't like it."—*A. E.*, IV.

79. THE EDUCATION OF GIRLS.—Do not think you can make a girl lovely, if you do not make her happy. There is not one restraint you put on a good girl's nature—there is not one check you give to her instincts of affection or of effort—which will not be indelibly written on her features, with a hardness which is all the more painful because it takes away the brightness from the eyes of innocence, and the charm from the brow of virtue.

This for the means: now note the end. Take from Wordsworth, in two lines, a perfect description of womanly beauty—

"A countenance in which did meet
Sweet records, promises as sweet." |

The perfect loveliness of a woman's countenance can only consist in that majestic peace which is founded in memory of happy and useful years,—full of sweet records ; and from the joining of this with that yet more majestic childishness, which is still full of change and promise ;—opening always—modest at once, and bright, with hope of better things to be won, and to be bestowed. There is no old age where there is still that promise.

Thus, then, you have first to mould her physical frame, and then, as the strength she gains will permit you, to fill and temper her mind with all knowledge and thoughts which tend to confirm its natural instincts of justice, and refine its natural tact of love.

All such knowledge should be given her as may enable her to understand, and even to aid, the work of men : and yet it should be given, not as knowledge,—not as if it were, or could be, for her an object to know ; but only to feel, and to judge. It is of no moment, as a matter of pride or perfectness in herself, whether she knows many languages or one ; but it is of the utmost, that she should be able to show kindness to a stranger, and to understand the sweetness of a stranger's tongue. It is of no moment to her own worth or dignity that she should be acquainted with this science or that ; but it is of the highest that she should be trained in habits of accurate thought that she should understand the meaning

inevitableness, and the loveliness of natural laws ; and follow at least some one path of scientific attainment, as far as to the threshold of that bitter Valley of Humiliation, into which only the wisest and bravest of men can descend, owning themselves for ever children, gathering pebbles on a boundless shore. It is of little consequence how many positions of cities she knows, or how many dates of events, or names of celebrated persons—it is not the object of education to turn the woman into a dictionary ; but it is deeply necessary that she should be taught to enter with her whole personality into the history she reads ; to picture the passages of it vitally in her own bright imagination ; to apprehend, with her fine instincts, the pathetic circumstances and dramatic relations, which the historian too often only eclipses by his reasoning, and disconnects by his arrangement : it is for her to trace the hidden equities of divine reward, and catch sight, through the darkness, of the fateful threads of woven fire that connect error with retribution. But, chiefly of all, she is to be taught to extend the limits of her sympathy with respect to that history which is being for ever determined as the moments pass, in which she draws her peaceful breath ; and to the contemporary calamity, which, were it but rightly mourned by her, would recur no more hereafter.

- is to exercise herself in imagining what would
- effects upon her mind and conduct, if she

were daily brought into the presence of the suffering which is not the less real because shut from her sight. She is to be taught somewhat to understand the nothingness of the proportion which that little world in which she lives and loves, bears to the world in which God lives and loves;—and solemnly she is to be taught to strive that her thoughts of piety may not be feeble in proportion to the number they embrace, nor her prayer more languid than it is for the momentary relief from pain of her husband or her child, when it is uttered for the multitudes of those who have none to love them,—and is, “for all who are desolate and oppressed.”—*S. and L.*, II., § 70-72.

80. CONTENTMENT.—In spite of all the cant which is continually talked by cruel, foolish, or designing persons about “the duty of remaining content in the position in which Providence has placed you,” there is a root of the very deepest and holiest truth in the saying, which gives to it such power as it still retains, even uttered by unkind and unwise lips, and received into doubtful and embittered hearts.

If, indeed, no effort be made to discover, in the course of their early training, for what services the youths of a nation are individually qualified; nor any care taken to place those who have unquestionably proved their fitness for certain functions, in the offices they could best fulfil.

then, to call the confused wreck of social order and life brought about by malicious collision and competition, an arrangement of Providence, is quite one of the most insolent and wicked ways in which it is possible to take the name of God in vain. But if, at the proper time, some earnest effort be made to place youths, according to their capacities, in the occupations for which they are fitted, I think the system of organisation will be finally found the best, which gives the least encouragement to thoughts of any great future advance in social life.

The healthy sense of progress, which is necessary to the strength and happiness of men, does not consist in the anxiety of a struggle to attain higher place, or rank, but in gradually perfecting the manner, and accomplishing the ends, of the life which we have chosen, or which circumstances have determined for us. Thus, I think the object of a workman's ambition should not be to become a master; but to attain daily more subtle and exemplary skill in his own craft, to save from his wages enough to enrich and complete his home gradually with more delicate and substantial comforts; and to lay by such store as shall be sufficient for the happy maintenance of his old age (rendering him independent of the help provided for the sick and indigent by the arrangement presupposed), and sufficient also for the starting of his children in a rank of life equal to his own.

If his wages are not enough to enable him to do this, they are unjustly low; if they are once raised to this adequate standard, I do not think that by the possible increase of his gains under contingencies of trade, or by divisions of profits with his master, he should be enticed into feverish hope of an entire change of condition; and as an almost necessary consequence, pass his days in an anxious discontent with immediate circumstances, and a comfortless scorn of his daily life, for which no subsequent success could indemnify him. And I am the more confident in this belief, because, even supposing a gradual rise in social rank possible for all well-conducted persons, my experience does not lead me to think the elevation itself, when attained, would be conducive to their happiness.—*C. W. O.*, II., § 5-7.

81. EDUCATION DESTROYS EQUALITY.—In the handful of shingle which you gather from the sea-beach, which the indiscriminate sea, with equality of fraternal foam, has only educated to be, every one, round, you will see little difference between the noble and mean stones. But the jeweller's trenchant education of them will tell you another story. Even the meanest will be better for it, but the noblest so much better that you can class the two together no more. The fair veins and colours are all clear now, and so stern is nature's intent regarding this, that r

only will the polish show which is best, but the best will take most polish. You shall not merely see they have more virtue than the others, but see that more of virtue more clearly: and the less virtue there is, the more dimly you shall see what there is of it.

And the law about education, which is sorrowfullest to vulgar pride, is this—that all its gains are at compound interest; so that, as our work proceeds, every hour throws us farther behind the greater men with whom we began on equal terms. Two children go to school hand in hand, and spell for half an hour over the same page. Through all their lives, never shall they spell from the same page more. One is presently a page a-head,—two pages, ten pages,—and evermore, though each toils equally, the interval enlarges—at birth nothing, at death, infinite.

And by this you may recognise true education from false. False education is a delightful thing, and warms you, and makes you every day think more of yourself. And true education is a deadly cold thing, with a Gorgon's head on her shield, and makes you every day think worse of yourself.—*T. and T.*, XXV., § 171–173.

82. THE END OF EDUCATION.—I hear strange talk continually, “how difficult it is to make people pay for being educated!” Why, I should think
 1! Do you make your children pay for their

education, or do you give it them compulsorily, and gratis? You do not expect *them* to pay you for their teaching, except by becoming good children. Why should you expect a peasant to pay for his, except by becoming a good man?—payment enough, I think, if we knew it. Payment enough to himself, as to us. For that is another of our grand popular mistakes—people are always thinking of education as a means of livelihood. Education is not a profitable business, but a costly one; nay, even the best attainments of it are always unprofitable, in any terms of coin. No nation ever made its bread either by its great arts, or its great wisdoms. By its minor arts or manufactures, by its practical knowledges, yes: but its noble scholarship, its noble philosophy, and its noble art, are always to be bought as a treasure, not sold for a livelihood. You do not learn that you may live—you live that you may learn. You are to spend on National Education, and to be spent for it, and to make by it, not more money, but better men;—to get into this British Island the greatest possible number of good and brave Englishmen. *They* are to be your “money’s worth.”—*C. W. O.*, IV., § 145.

III.

ETHICS.

83. MAN AND BEAST.—Yonder poor horse, calm slave in daily chains at the railroad siding, who drags the detached rear of the train to the front again, and slips aside so deftly as the buffers meet; and, within eighteen inches of death every ten minutes, fulfils his changeless duty all day long, content, for eternal reward, with his night's rest, and his champed mouthful of hay;—anything more earnestly moral and beautiful one cannot image—I never see the creature without a kind of worship. And yonder musician, who used the greatest power which (in the art he knew) the Father of spirits ever yet breathed into the clay of this world;—who used it, I say, to follow and fit with perfect sound the words of the “Zauberflöte” and of “Don Giovanni”—foolishest and most monstrous of conceivable human words and subjects of thought—for the future “amusement” of his race!—No such spectacle of unconscious (and in that unconsciousness all the more fearful) moral degradation of the highest faculty to the lowest purpose can be found in history. But

Mozart is nevertheless a nobler creature than the horse at the siding; nor would it be the least nearer the purpose of his Maker that he, and all his frivolous audiences, should evade the degradation of the profitless piping, only by living, like horses, in daily physical labour for daily bread.

There are three things to which man is born—labour, and sorrow, and joy. Each of these three things has its baseness and its nobleness. There is base labour, and noble labour. There is base sorrow, and noble sorrow. There is base joy, and noble joy. But you must not think to avoid the corruption of these things by doing without the things themselves. Nor can any life be right that has not all three. Labour without joy is base. Labour without sorrow is base. Sorrow without labour is base. Joy without labour is base.—*T. and T.*, V., § 20, 21.

84. MAN IN CREATION.—The laws under which matter is collected and constructed are the same throughout the universe: the substance so collected, whether for the making of the eagle, or the worm, may be analysed into gaseous identity; a diffusive vital force, apparently so closely related to mechanically measurable heat as to admit the conception of its being itself mechanically measurable, and unchanging in total quantity, ebbs and flows alike through the limbs of men and the fibres of insects. But, above all this, and ruling

every grotesque or degraded accident of this, are two laws of beauty in form, and of nobility in character, which stand in the chaos of creation between the Living and the Dead, to separate the things that have in them a sacred and helpful, from those that have in them an accursed and destroying, nature; and the power of Athena, first physically put forth in the sculpturing of these ζῶα and ἐρπετὰ, these living and reptile things, is put forth, finally, in enabling the hearts of men to discern the one from the other; to know the unquenchable fires of the Spirit from the unquenchable fires of Death; and to choose, not unaided, between submission to the Love that cannot end, or to the Worm that cannot die.

The unconsciousness of their antagonism is the most notable characteristic of the modern scientific mind; and I believe no credulity or fallacy admitted by the weakness (or it may sometimes rather have been the strength) of early imagination, indicates so strange a depression beneath the due scale of human intellect, as the failure of the sense of beauty in form, and loss of faith in heroism of conduct, which have become the curses of recent science, art, and policy.

That depression of intellect has been alike exhibited in the mean consternation confessedly felt on one side, and the mean triumph apparently felt on the other, during the course of the dispute now pending as to the origin of man. Dispute

for the present not to be decided, and of which the decision is, to persons in the modern temper of mind, wholly without significance: and I earnestly desire that you, my pupils, may have firmness enough to disengage your energies from investigation so premature and so fruitless, and sense enough to perceive that it does not matter how you have been made, so long as you are satisfied with being what you are. If you are dissatisfied with yourselves, it ought not to console, but humiliate you, to imagine that you were once seraphs; and if you are pleased with yourselves, it is not any ground of reasonable shame to you if, by no fault of your own, you have passed through the elementary condition of apes.

Remember, therefore, that it is of the very highest importance that you should know what you *are*, and determine to be the best that you may be; but it is of no importance whatever, except as it may contribute to that end, to know what you have been. Whether your Creator shaped you with fingers, or tools, as a sculptor would a lump of clay, or gradually raised you to manhood through a series of inferior forms, is only of moment to you in this respect—that in the one case you cannot expect your children to be nobler creatures than you are yourselves—in the other, every act and thought of your present life may be hastening the advent of a race which will look back to you, their fathers (and you ought at least

to have attained the dignity of desiring that it may be so,) with incredulous disdain.

But that you *are* yourselves capable of that disdain and dismay; that you are ashamed of having been apes, if you ever were so; that you acknowledge, instinctively, a relation of better and worse, and a law respecting what is noble and base, which makes it no question to you that the man is worthier than the baboon,—*this* is a fact of infinite significance. This law of preference in your hearts is the true essence of your being, and the consciousness of that law is a more positive existence than any dependent on the coherence or forms of matter.—*A. P.*, III., § 100–104.

85. EYESIGHT.—Have you ever considered how much literal truth there is in the words—“The light of the body is the eye. If, therefore, thine eye be evil”—and the rest? How *can* the eye be evil? How, if evil, can it fill the whole body with darkness?

What is the meaning of having one's body *full* of darkness? It cannot mean merely being blind. Blind, you may fall in a ditch if you move; but you may be well, if at rest. But to be evil-eyed, is not that worse than to have no eyes? and instead of being only in darkness, to have darkness in *us*, portable, perfect, and eternal?

Well, in order to get at the meaning we may, indeed, now appeal to physical science, and ask

her to help us. How many manner of eyes are there? You physical-science students should be able to tell us painters that. We only know, in a vague way, the external aspect and expression of eyes. We see, as we try to draw the endlessly-grotesque creatures about us, what infinite variety of instruments they have; but you know, far better than we do, how those instruments are constructed and directed. You know how some play in their sockets with independent revolution,—project into near-sightedness on pyramids of bone,—are brandished at the points of horns,—studded over backs and shoulders,—thrust at the ends of antennæ to pioneer for the head, or pinched up into tubercles at the corners of the lips. But how do the creatures see out of all these eyes?

No business of ours, you may think? Pardon me. This is no Siren's question—this is altogether business of ours, lest, perchance, any of us should see partly in the same manner. Comparative sight is a far more important question than comparative anatomy. It is no matter, though we sometimes walk—and it may often be desirable to climb—like apes; but suppose we should only *see* like apes, or like lower creatures? I can tell you, the science of optics is an essential one to us; for exactly according to these infinitely grotesque directions and multiplications of instrument, you have correspondent, not only intellectual but

moral, faculty in the soul of the creatures. Literally, if the eye be pure, the body is pure; but, if the light of the body be but darkness, how great is that darkness!

Have you ever looked attentively at the study I gave you of the head of the rattlesnake? The serpent will keep its eyes fixed on you for an hour together, a vertical slit in each admitting such image of you as is possible to the rattlesnake retina, and to the rattlesnake mind. How much of you do you think it sees? I ask that, first, as a pure physical question. I do not know; it is not my business to know. You, from your schools of physical science, should bring me answer. How much of a man can a snake see? What sort of image of him is received through that deadly vertical cleft in the iris;—through the glazed blue of the ghastly lens? Make me a picture of the appearance of a man, as far as you can judge it can take place on the snake's retina. Then ask yourselves, farther, how much of speculation is possible to the snake, touching this human aspect?

Or, if that seem too far beneath possible inquiry, how say you of a tiger's eye, or a cat's? A cat may look at a king;—yes; but can it *see* a king when it looks at him? The beasts of prey never seem to me to *look*, in our sense, at all. Their eyes are fascinated by the motion of anything, as a kitten's by a ball;—they fasten, as if drawn by

an inevitable attraction, on their food. But when a cat caresses you, it never looks at you. Its heart seems to be in its back and paws, not its eyes. It will rub itself against you, or pat you with velvet tufts instead of talons ; but you may talk to it an hour together, yet not rightly catch its eye. Ascend higher in the races of being—to the fawn, the dog, the horse ; you will find that, according to the clearness of sight, is indeed the kindness of sight, and that at last the noble eyes of humanity look through humanity, from heart into heart and with no mechanical vision. And the Light of the body is the eye—yes, and in happy life, the light of the heart also.—*E. N.*, VI., § 106–110.

86. OPINION.—Unless you are a very singular person, you cannot be said to have any “thoughts” at all ; you have no materials for them, in any serious matters ;—no right to “think,” but only to try to learn more of the facts. Nay, most probably all your life (unless, as I said, you are a singular person) you will have no legitimate right to an “opinion” on any business, except that instantly under your hand. What must of necessity be done, you can always find out, beyond question, how to do. Have you a house to keep in order, a commodity to sell, a field to plough, a ditch to cleanse ? There need be no two opinions about the proceedings ; it is at your

peril if you have not much more than an "opinion" on the way to manage such matters. And also, outside of your own business, there are one or two subjects on which you are bound to have but one opinion. That roguery and lying are objectionable, and are instantly to be flogged out of the way whenever discovered;—that covetousness and love of quarrelling are dangerous dispositions even in children, and deadly dispositions in men and nations;—that in the end, the God of heaven and earth loves active, modest, and kind people, and hates idle, proud, greedy, and cruel ones;—on these general facts you are bound to have but one, and that a very strong, opinion. For the rest, respecting religions, governments, sciences, arts, you will find that, on the whole, you can know NOTHING,—judge nothing; that the best you can do, even though you may be a well-educated person, is to be silent, and strive to be wiser every day, and to understand a little more of the thoughts of others, which so soon as you try to do honestly, you will discover that the thoughts even of the wisest are very little more than pertinent questions. To put the difficulty into a clear shape, and exhibit to you the grounds for *indecision*, that is all they can generally do for you!—and well for them and for us, if indeed they are able "to mix the music with our thoughts, and sadden us with heavenly doubts."—*S. and L.*, I., § 25.

87. CONSCIENCE.—It has been a prevalent notion in the minds of well-disposed persons, that if they acted according to their own conscience, they must, therefore, be doing right.

But they assume, in feeling or asserting this, either that there is no Law of God, or that it cannot be known ; but only felt, or conjectured.

“I must do what *I* think right.” How often is this sentence uttered and acted on—bravely—nobly—innocently ; but always—because of its egotism—erringly. You must not do what *YOU* think right, but, whether you or anybody think, or don’t think it, what *is* right.

“I must act according to the dictates of my conscience.”

By no means, my conscientious friend, unless you are quite sure that yours is not the conscience of an ass.

“I am doing my best—what can man do more ?”

You might be doing much less, and yet much better ;—perhaps you are doing your best in producing, or doing, an eternally bad thing.

All these three sayings, and the convictions they express, are wise only in the mouths and minds of wise men ; they are deadly, and all the deadlier because bearing an image and superscription of virtue, in the mouths and minds of fools.

“But there is gradation, surely, between wisdom and folly ?”

No. The fool, whatever his wit, is the man

who doesn't know his master—who has said in his heart—there is no God—no Law.

The wise man knows his master. Less or more wise, he perceives lower or higher masters; but always some creature larger than himself—some law holier than his own. A law to be sought—learned, loved—obeyed; but in order to its discovery, the obedience must be begun first, to the best one knows. Obey *something*; and you will have a chance some day of finding out what is best to obey. But if you begin by obeying nothing you will end by obeying Beelzebub and all his seven invited friends.—*F. C.*, Letter 54.

88. THE MORAL SANCTION.—When a father sends his son out into the world—suppose as an apprentice—fancy the boy's coming home at night, and saying, "Father, I could have robbed the till to-day; but I didn't, because I thought you wouldn't like it." Do you think the father would be particularly pleased? He would answer, would he not, if he were wise and good, "My boy, though you had no father, you must not rob tills?" And nothing is ever done so as really to please our Great Father, unless we would also have done it, though we had had no Father to know of it.—*Eth. D.*, VII.

89. "EMIGRAVIT."—Every day at Cornhill, Charles became more delightful and satisfactory

to everybody who knew him. How a boy living all day in London could keep so bright a complexion, and so crisply Achillean curls of hair—and all the gay spirit of his Croydon mother—was not easily conceivable; but he became a perfect combination of the sparkle of Jin Vin with the steadiness of Tunstall, and was untroubled by the charms of any unattainable Margaret, for his master had no daughter; but, as worse chance would have it, a son: so that looking forward to possibilities as a rising apprentice ought, Charles saw that there were none in the house for him beyond the place of cashier, or perhaps only head-clerk. His elder brother, who had taught him to swim by throwing him into Croydon canal, was getting on fast as a general trader in Australia, and naturally longed to have his best-loved brother there for a partner. Bref, it was resolved that Charles should go to Australia. The Christmas time of 1833 passed heavily, for I was very sorry; Mary, a good deal more so: and my father and mother, though in their hearts caring for nobody in the world but me, were grave at the thought of Charles's going so far away; but honestly and justifiably, thought it for the lad's good. I think the whole affair was decided, and Charles's outfit furnished, and ship's berth settled, and ship's captain interested in his favour, in something less than a fortnight, and down he went to Portsmouth, to join his ship joyfully, with the world to win.

By due post came the news that he was at anchor off Cowes, but that the ship could not sail because of the west wind. And post succeeded post, and still the west wind blew. We liked the west wind for its own sake, but it was a prolonging of farewell which teased us, though Charles wrote that he was enjoying himself immensely, and the captain, that he had made friends with every sailor on board, besides the passengers.

And still the west wind blew. I do not remember how long—some ten days or fortnight, I believe. At last, one day my mother and Mary went with my father into town on some shopping or sight-seeing business of a cheerful character; and I was left at home, busy also about something that cheered me greatly, I know not what; but when I heard the others come in, and upstairs into the drawing-room, I ran eagerly down and into the room, beginning to tell them about this felicity that had befallen me, whatever it was. They all stood like statues, my father and mother very grave. Mary was looking out of the window—the farthest of the front three from the door. As I went on, boasting of myself, she turned round suddenly, her face all streaming with tears, and caught hold of me, and put her face close to mine, that I might hear the sobbing whisper, “Charles is gone.”

The west wind had still blown, clearly and strong, and the day before there had been a fresh

breeze of it round the isle, at Spithead; exactly the kind of breeze that drifts the clouds, and ridges the waves, in Turner's Gosport.

The ship was sending her boat on shore for some water, or the like—her little cutter, or somehow sailing, boat. There was a heavy sea running, and the sailors, and, I believe, also a passenger or two, had some difficulty in getting on board. "May I go, too?" said Charles to the captain, as he stood seeing them down the side. "Are you not afraid?" said the captain. "I never was afraid of anything in my life," said Charles, and went down the side and leaped in.

The boat had not got fifty yards from the ship before she went over, but there were other boats sailing all about them, like gnats in midsummer. Two or three scudded to the spot in a minute, and every soul was saved, except Charles, who went down like a stone:—22nd January 1834.

All this we knew by little and little. For the first day or two we would not believe it, but thought he must have been taken up by some other boat and carried to sea. At last came word that his body had been thrown ashore at Cowes: and his father went down to see him buried. That done, and all the story heard, for still the ship stayed, he came to Herne Hill, to tell Charles's "Auntie" all about it. (The old man never called my mother anything else than Auntie.) It was in the morning, in the front parlour—my mother

knitting in her usual place at the fireside, I at my drawing, or the like, in my own place also. My uncle told all the story, in the quiet steady sort of way that the common English do, till just at the end he broke down into sobbing, saying (I can hear the words now), "They caught the cap off of his head, and yet they couldn't save him!" —*Præterita*, I. VII.

90. THE BASIS OF MORALITY.—Supposing it were told any of you by a physician whose word you could not but trust, that you had not more than seven days to live. And suppose also that, by the manner of your education it had happened to you, as it has happened to many, never to have heard of any future state, or not to have credited what you heard; and therefore that you had to face this fact of the approach of death in its simplicity: fearing no punishment for any sin that you might have before committed, or in the coming days might determine to commit; and having similarly no hope of reward for past, or yet possible, virtue; nor even of any consciousness whatever to be left to you, after the seventh day had ended, either of the results of your acts to those whom you loved, or of the feelings of any survivors towards you. Then the manner in which you would spend the seven days is an exact measure of the morality of your nature.

I know that some of you, and I believe the

greater number of you, would, in such a case, spend the granted days entirely as you ought. Neither in numbering the errors, or deploring the pleasures of the past ; nor in grasping at vile good in the present, nor vainly lamenting the darkness of the future ; but in an instant and earnest execution of whatever it might be possible for you to accomplish in the time, in setting your affairs in order, and in providing for the future comfort, and—so far as you might by any message or record of yourself, —for the consolation, of those whom you loved, and by whom you desired to be remembered, not for your good, but for theirs. How far you might fail through human weakness, in shame for the past, despair at the little that could in the remnant of life be accomplished, or the intolerable pain of broken affection, would depend wholly on the degree in which your nature had been depressed or fortified by the manner of your past life. But I think there are few of you who would not spend those last days better than all that had preceded them.

If you look accurately through the records of the lives that have been most useful to humanity, you will find that all that has been done best, has been done so ;—that to the clearest intellects and highest souls,—to the true children of the Father, with whom a thousand years are as one day, their poor seventy years are but as seven days. The removal of the shadow of death from

them to an uncertain, but always narrow, distance, never takes away from them their intuition of its approach; the extending to them of a few hours more or less of light abates not their acknowledgment of the infinitude that must remain to be known beyond their knowledge,—done beyond their deeds: the unprofitableness of their momentary service is wrought in a magnificent despair, and their very honour is bequeathed by them for the joy of others, as they lie down to their rest, regarding for themselves the voice of men no more.

The best things, I repeat to you, have been done thus, and therefore, sorrowfully. But the greatest part of the good work of the world is done either in pure and unvexed instinct of duty, "I have stubbed Thornaby waste," or else, and better, it is cheerful and helpful doing of what the hand finds to do, in surety that at evening time, whatsoever is right the Master will give. And that it be worthily done, depends wholly on that ultimate quantity of worth which you can measure, each in himself, by the test I have just given you. For that test, observe, will mark to you the precise force, first of your absolute courage, and then of the energy in you for the right ordering of things, and the kindly dealing with persons. You have cut away from these two instincts every selfish or common motive, and left nothing but the energies of Order and of Love.

Now, where those two roots are set, all the other powers and desires find right nourishment, and become to their own utmost, helpful to others and pleasurable to ourselves. And so far as those two springs of action are not in us, all other powers become corrupt or dead; even the love of truth, apart from these, hardens into an insolent and cold avarice of knowledge, which unused, is more vain than unused gold.

These, then, are the two essential instincts of humanity: the love of Order and the love of Kindness. By the love of order the moral energy is to deal with the earth, and to dress it, and keep it; and with all rebellious and dissolute forces in lower creatures, or in ourselves. By the love of doing kindness it is to deal rightly with all surrounding life. And then, grafted on these, we are to make every other passion perfect; so that they may every one have full strength and yet be absolutely under control.—*L. A.*, III., § 83-88.

91. IMAGINATION AS A MORAL FACTOR.—To *subdue* the passions, which is thought so often to be the sum of duty respecting them, is possible enough to a proud dulness; but to *excite* them rightly, and make them strong for good, is the work of the unselfish imagination. It is constantly said that human nature is heartless. Do not believe it. Human nature is kind and generous; but it is narrow and blind; and can only with

difficulty conceive anything but what it immediately sees and feels. People would instantly care for others as well as themselves if only they could *imagine* others as well as themselves. Let a child fall into the river before the roughest man's eyes ;—he will usually do what he can to get it out, even at some risk to himself ; and all the town will triumph in the saving of one little life. Let the same man be shown that hundreds of children are dying of fever for want of some sanitary measure which it will cost him trouble to urge, and he will make no effort ; and probably all the town would resist him if he did. So, also, the lives of many deserving women are passed in a succession of petty anxieties about themselves, and gleaning of minute interests and mean pleasures in their immediate circle, because they are never taught to make any effort to look beyond it ; or to know anything about the mighty world in which their lives are fading, like blades of bitter grass in fruitless fields.—*L. A.*, III., § 93.

92. PASSION, or “sensation.” I am not afraid of the word ; still less of the thing. You have heard many outcries against sensation lately ; but, I can tell you, it is not less sensation we want, but more. The ennobling difference between one man and another,—between one animal and another,—is precisely in this, that one feels more than another.

If we were sponges, perhaps sensation might not be easily got for us; if we were earth-worms, liable at every instant to be cut in two by the spade, perhaps too much sensation might not be good for us. But being human creatures, it *is* good for us; nay, we are only human in so far as we are sensitive, and our honour is precisely in proportion to our passion.

You know I said of that great and pure society of the Dead, that it would allow "no vile or vulgar person to enter there."* What do you think I meant by a "vulgar" person? What do you yourselves mean by "vulgarity"? You will find it a fruitful subject of thought; but, briefly, the essence of all vulgarity lies in want of sensation. Simple and innocent vulgarity is merely an untrained and undeveloped bluntness of body and mind; but in true inbred vulgarity, there is a dreadful callousness, which, in extremity, becomes capable of every sort of bestial habit and crime, without fear, without pleasure, without horror, and without pity. It is in the blunt hand and the dead heart, in the diseased habit, in the hardened conscience, that men become vulgar; they are for ever vulgar, precisely in proportion as they are incapable of sympathy—of quick understanding,—of all that, in deep insistence on the common, but most accurate term, may be called the "tact" or "touch-faculty," of body and soul: that tact which the *Mimosa* has

[* See § 56 of this volume.]

in trees, which the pure woman has above all creatures;—fineness and fulness of sensation, beyond reason;—the guide and sanctifier of reason itself. Reason can but determine what is true:—it is the God-given passion of humanity which alone can recognise what God has made good.

We come then to that great concourse of the Dead, not merely to know from them what is true, but chiefly to feel with them what is just. Now, to feel with them, we must be like them; and none of us can become that without pains. As the true knowledge is disciplined and tested knowledge,—not the first thought that comes,—so the true passion is disciplined and tested passion,—not the first passion that comes. The first that come are the vain, the false, the treacherous; if you yield to them, they will lead you wildly and far, in vain pursuit, in hollow enthusiasm, till you have no true purpose and no true passion left. Not that any feeling possible to humanity is in itself wrong, but only wrong when undisciplined. Its nobility is in its force and justice; it is wrong when it is weak, and felt for paltry cause. There is a mean wonder, as of a child who sees a juggler tossing golden balls, and this is base, if you will. But do you think that the wonder is ignoble, or the sensation less, with which every human soul is called to watch the golden balls of heaven tossed through the night by the Hand that made them? There

is a mean curiosity, as of a child opening a forbidden door, or a servant prying into her master's business;—and a noble curiosity, questioning, in the front of danger, the source of the great river beyond the sand,—the place of the great continent beyond the sea;—a nobler curiosity still, which questions of the source of the River of Life, and of the space of the Continent of Heaven—things which “the angels desire to look into.” So the anxiety is ignoble, with which you linger over the course and catastrophe of an idle tale; but do you think the anxiety is less, or greater, with which you watch, or *ought* to watch, the dealings of fate and destiny with the life of an agonised nation? Alas! it is the narrowness, selfishness, minuteness, of your sensation that you have to deplore in England at this day;—sensation which spends itself in bouquets and speeches; in revellings and junketings; in sham fights and gay puppet shows, while you can look on and see noble nations murdered, man by man, without an effort or a tear.—*S. and L.*, I., § 27–29.

93. MOTIVE.—No one can be forced to do a wrong thing, for the guilt is in the will: but you may any day be forced to do a fatal thing, as you might be forced to take poison; the remarkable law of nature in such cases being, that it is always unfortunate *you* who are poisoned, and not the person who gives you the dose. It is a very

strange law, but it *is* a law. Nature merely sees to the carrying out of the normal operation of arsenic. She never troubles herself to ask who gave it you. So also you may be starved to death, morally as well as physically, by other people's faults. You are, on the whole, very good children sitting here to-day :—do you think that your goodness comes all by your own contriving? or that you are gentle and kind because your dispositions are naturally more angelic than those of the poor girls who are playing, with wild eyes, on the dust heaps in the alleys of our great towns; and who will one day fill their prisons,—or, better, their graves? Heaven only knows where they, and we who have cast them there, shall stand at last. But the main judgment question will be, I suppose, for all of us, “Did you keep a good heart through it?” What you were, others may answer for;—what you tried to be, you must answer for yourself. Was the heart pure and true—tell us that?—*Eth. D.*, V.

94. CRYSTAL VIRTUES.—There seem to be in some crystals from the beginning, an unconquerable purity of vital power, and strength of crystal spirit. Whatever dead substance, unacceptant of this energy, comes in their way, is either rejected, or forced to take some beautiful subordinate form; the purity of the crystal remains unsullied, and

every atom of it bright with coherent energy. Then the second condition is, that from the beginning of its whole structure, a fine crystal seems to have determined that it will be of a certain size and of a certain shape; it persists in this plan, and completes it. Here is a perfect crystal of quartz for you. It is of an unusual form, and one which it might seem very difficult to build—a pyramid with convex sides, composed of other minor pyramids. But there is not a flaw in its contour throughout; not one of its myriads of component sides but is as bright as a jeweller's faceted work (and far finer, if you saw it close). The crystal points are as sharp as javelins; their edges will cut glass with a touch. Anything more resolute, consummate, determinate in form cannot be conceived. Here, on the other hand, is a crystal of the same substance, in a perfectly simple type of form—a plain six-sided prism; but from its base to its point,—and it is nine inches long,—it has never for one instant made up its mind what thickness it will have. It seems to have begun by making itself as thick as it thought possible with the quantity of material at command. Still not being as thick as it would like to be, it has clumsily glued on more substance at one of its sides. Then it has thinned itself, in a panic of economy; then puffed itself out again; then starved one side to enlarge another; then warped itself quite out of its first line. Opaque,

rough-surfaced, jagged on the edge, distorted in the spine, it exhibits a quite human image of decrepitude and dishonour; but the worst of all the signs of its decay and helplessness is that, half way up, a parasite crystal, smaller, but just as sickly, has rooted itself in the side of the larger one, eating out a cavity round its root, and then growing backwards, or downwards, contrary to the direction of the main crystal. Yet I cannot trace the least difference in purity of substance between the first most noble stone, and this ignoble and dissolute one. The impurity of the last is in its will, or want of will.—*Eth. D.*, V.

95. HUMAN WELLBEING.—Human nature, as its Creator made it, and maintains it wherever His laws are observed, is entirely harmonious. No physical error can be more profound, no moral error more dangerous, than that involved in the monkish doctrine of the opposition of body to soul. No soul can be perfect in an imperfect body: no body perfect without perfect soul. Every right action and true thought sets the seal of its beauty on person and face; every wrong action and foul thought its seal of distortion; and the various aspects of humanity might be read as plainly as a printed history, were it not that the impressions are so complex that it must always in some cases (and, in the present state of our knowledge, in all cases) be impossible to decipher them completely.

Nevertheless, the face of a consistently just, and of a consistently unjust person, may always be rightly distinguished at a glance; and if the qualities are continued by descent through a generation or two, there arises a complete distinction of race. Both moral and physical qualities are communicated by descent, far more than they can be developed by education, (though both may be destroyed by want of education); and there is as yet no ascertained limit to the nobleness of person and mind which the human creature may attain, by persevering observance of the laws of God respecting its birth and training. . . .

The perfect type of manhood, as just stated, involves the perfections (whatever we may hereafter determine these to be) of his body, affections, and intelligence. The material things, therefore, which it is the object of political economy to produce and use, (or accumulate for use,) are things which serve either to sustain and comfort the body, or exercise rightly the affections and form the intelligence. Whatever truly serves either of these purposes is "useful" to man, wholesome, healthful, helpful, or holy. By seeking such things, man prolongs and increases his life upon the earth.

On the other hand, whatever does not serve either of these purposes,—much more whatever counteracts them,—is in like manner useless to man, unwholesome, unhelpful, or unholy; and by

seeking such things man shortens and diminishes his life upon the earth.

And neither with respect to things useful or useless can man's estimate of them alter their nature. Certain substances being good for his food, and others noxious to him, what he thinks or wishes respecting them can neither change, nor prevent, their power. If he eats corn, he will live; if nightshade, he will die. If he produce or make good and beautiful things, they will *Re-Create* him; (note the solemnity and weight of the word); if bad and ugly things, they will "corrupt" or "break in pieces"—that is, in the exact degree of their power, Kill him. For every hour of labour, however enthusiastic or well intended, which he spends for that which is not bread, so much possibility of life is lost to him. His fancies, likings, beliefs, however brilliant, eager, or obstinate, are of no avail if they are set on a false object. Of all that he has laboured for, the eternal law of heaven and earth measures out to him for reward, to the utmost atom, that part which he ought to have laboured for, and withdraws from him (or enforces on him, it may be) inexorably, that part which he ought not to have laboured for until, on his summer threshing-floor, stands his heap of corn; little or much, not according to his labour, but to his discretion. No "commercial arrangements," no painting of surfaces, nor alloying of substances, will avail him a

pennyweight. Nature asks of him calmly and inevitably, What have you found, or formed—the right thing or the wrong? By the right thing you shall live; by the wrong you shall die.

To thoughtless persons it seems otherwise. The world looks to them as if they could cozen it out of some ways and means of life. But they cannot cozen IT: they can only cozen their neighbours. The world is not to be cheated of a grain; not so much as a breath of its air can be drawn surreptitiously. For every piece of wise work done, so much life is granted; for every piece of foolish work, nothing; for every piece of wicked work, so much death is allotted. This is as sure as the courses of day and night.—*Munera Pulveris*, I., § 6–10.

96. DESTINY.—Ever since Carlyle wrote that sentence about rights and mights, in his "French Revolution," all blockheads of a benevolent class have been declaiming against him, as a worshipper of force. What else, in the name of the three Magi, *is* to be worshipped? Force of brains, Force of heart, Force of hand;—will you dethrone these, and worship apoplexy?—despise the spirit of Heaven and worship phthisis? Every condition of idolatry is summed in the one broad wickedness of refusing to worship Force, and resolving to worship No-Force;—denying the

Almighty, and bowing down to four-and-twopence with a stamp on it.

But Carlyle never meant in that place to refer you to such final truth. He meant but to tell you that before you dispute about what you should get, you would do well to find out first what is to be gotten. Which briefly is, for everybody, at last, their deserts, and no more. . . .

Foolish moral writers will tell you that whenever you do wrong you will be punished, and whenever you do right rewarded: which is true, but only half the truth. And foolish immoral writers will tell you that if you do right, you will get no good; and if you do wrong dexterously, no harm. Which, in their sense of good and harm, is true also, but, even in that sense, only half the truth. The joined and four-square truth is, that every right is exactly rewarded, and every wrong exactly punished; but that, in the midst of this subtle, and, to our impatience, slow, retribution, there is a startlingly separate or counter ordinance of good and evil,—one to this man, and the other to that,—one at this hour of our lives, and the other at that,—ordinance which is entirely beyond our control; and of which the providential law, hitherto, defies investigation.

Setting this Destiny, over which you have no control whatsoever, for the time, out of your thoughts, there remains the symmetrical destiny, over which you have control absolute—namely,

that you are ultimately to get—exactly what you are worth.

And your control over this destiny consists, therefore, simply in *being* worth more or less. —*F. C.*, Letter 13.

97. REFORMATORY MEASURES.—In framing laws respecting the treatment or employment of improvident and more or less vicious persons, it is to be remembered that as men are not made heroes by the performance of an act of heroism, but must be brave before they can perform it, so they are not made villains by the commission of a crime, but were villains before they committed it; and that the right of public interference with their conduct begins when they begin to corrupt themselves;—not merely at the moment when they have proved themselves hopelessly corrupt.

All measures of reformation are effective in exact proportion to their timeliness: partial decay may be cut away and cleansed; incipient error corrected: but there is a point at which corruption can no more be stayed, nor wandering recalled. It has been the manner of modern philanthropy to remain passive until that precise period, and to leave the sick to perish, and the foolish to stray, while it spent itself in frantic exertions to raise the dead, and reform the dust.

The recent direction of a great weight of public opinion against capital punishment is, I trust, the

sign of an awakening perception that punishment is the last and worst instrument in the hands of the legislator for the prevention of crime. The true instruments of reformation are employment and reward;—not punishment. Aid the willing, honour the virtuous, and compel the idle into occupation, and there will be no need for the compelling of any into the great and last indolence of death.

The beginning of all true reformation among the criminal classes depends on the establishment of institutions for their active employment, while their criminality is still unripe, and their feelings of self-respect, capacities of affection, and sense of justice, not altogether quenched. That those who are desirous of employment should always be able to find it, will hardly, at the present day, be disputed: but that those who are *undesirous* of employment should of all persons be the most strictly compelled to it, the public are hardly yet convinced; and they must be convinced. If the danger of the principal thoroughfares in their capital city, and the multiplication of crimes more ghastly than ever yet disgraced a nominal civilisation, are not enough, they will not have to wait long before they receive sterner lessons. For our neglect of the lower orders has reached a point at which it begins to bear its necessary fruit, and every day makes the fields, not whiter, but more sable, to harvest.—*Q. A.*, III., § 128, 129.

98. PUNISHMENT.—All true justice is vindictive to vice, as it is rewarding to virtue. Only—and herein it is distinguished from personal revenge—it is vindictive of the wrong done;—not of the wrong done *to us*. It is the national expression of deliberate anger, as of deliberate gratitude; it is not exemplary, or even corrective, but essentially retributive; it is the absolute art of measured recompense, giving honour where honour is due, and shame where shame is due, and joy where joy is due, and pain where pain is due. It is neither educational, for men are to be educated by wholesome habit, not by rewards and punishments; nor is it preventive, for it is to be executed without regard to any consequences; but only for righteousness' sake, a righteous nation does judgment and justice.—*L. A.*, III., § 90.

99. THE GENESIS OF GENTILITY.—There is only one cure for public distress—and that is public education, directed to make men thoughtful, merciful, and just. There are, indeed, many laws conceivable which would gradually better and strengthen the national temper; but, for the most part, they are such as the national temper must be much bettered before it would bear. A nation in its youth may be helped by laws, as a weak child by backboards, but when it is old it cannot that way strengthen its crooked spine.

And besides: the problem of land, at its worst,

is a bye one; distribute the earth as you will, the principal question remains inexorable,—Who is to dig it? Which of us, in brief word, is to do the hard and dirty work for the rest—and for what pay? Who is to do the pleasant and clean work, and for what pay? Who is to do no work, and for what pay? And there are curious moral and religious questions connected with these. How far is it lawful to suck a portion of the soul out of a great many persons, in order to put the abstracted psychical quantities together and make one very beautiful or ideal soul? If we had to deal with mere blood instead of spirit, (and the thing might literally be done—as it has been done with infants before now)—so that it were possible by taking a certain quantity of blood from the arms of a given number of the mob, and putting it all into one person, to make a more azure-blooded gentleman of him, the thing would of course be managed; but secretly, I should conceive. But now, because it is brain and soul that we abstract, not visible blood, it can be done quite openly, and we live, we gentlemen, on delicatest prey, after the manner of weasels; that is to say, we keep a certain number of clowns digging and ditching, and generally stupefied, in order that we, being fed gratis, may have all the thinking and feeling to ourselves. Yet there is a great deal to be said for this. A highly-bred and trained English,

French, Austrian, or Italian gentleman (much more a lady), is a great production,—a better production than most statues; being beautifully coloured as well as shaped, and plus all the brains; a glorious thing to look at, a wonderful thing to talk to; and you cannot have it, any more than a pyramid or a church, but by sacrifice of much contributed life. And it is, perhaps, better to build a beautiful human creature than a beautiful dome or steeple—and more delightful to look up reverently to a creature far above us, than to a wall; only the beautiful human creature will have some duties to do in return—duties of living belfry and rampart—of which presently.—*S. and L., I., note.*

100. REVERENCE.—Exactly in the degree in which you can find creatures greater than yourself, to look up to, in that degree you are ennobled yourself, and, in that degree, happy. If you could live always in the presence of archangels, you would be happier than in that of men; but even if only in the company of admirable knights and beautiful ladies, the more noble and bright they were, and the more you could reverence their virtue, the happier you would be. On the contrary, if you were condemned to live among a multitude of idiots, dumb, distorted and malicious, you would not be happy in the constant sense of your own superiority. Thus all real joy

and power of progress in humanity depend on finding something to reverence, and all the baseness and misery of humanity begin in a habit of disdain. Now, by general misgovernment, I repeat, we have created in Europe a vast populace, and out of Europe a still vaster one, which has lost even the power and conception of reverence;—which exists only in the worship of itself— which can neither see anything beautiful around it, nor conceive anything virtuous above it; which has, towards all goodness and greatness, no other feelings than those of the lowest creatures—fear, hatred, or hunger; a populace which has sunk below your appeal in their nature, as it has risen beyond your power in their multitude;—whom you can now no more charm than you can the adder, nor discipline, than you can the summer fly.—*C. W. O.*, IV., § 137.

101. THE FLY AND THE WATCH-DOG.—I believe we can nowhere find a better type of a perfectly free creature than in the common house fly. Nor free only, but brave; and irreverent to a degree which I think no human republican could by any philosophy exalt himself to. There is no courtesy in him; he does not care whether it is king or clown whom he teases; and in every step of his swift mechanical march, and in every pause of his resolute observation, there is one and the same expression of perfect egotism, perfect

independence and self-confidence, and conviction of the world's having been made for flies. Strike at him with your hand ; and to him, the mechanical fact and external aspect of the matter is, what to you it would be, if an acre of red clay, ten feet thick, tore itself up from the ground in one massive field, hovered over you in the air for a second, and came crashing down with an aim. That is the external aspect of it ; the inner aspect, to his fly's mind, is of a quite natural and unimportant occurrence—one of the momentary conditions of his active life. He steps out of the way of your hand, and alights on the back of it. You cannot terrify him, nor govern him, nor persuade him, nor convince him. He has his own positive opinion on all matters ; not an unwise one, usually, for his own ends ; and will ask no advice of yours. He has no work to do—no tyrannical instinct to obey. The earthworm has his digging ; the bee her gathering and building ; the spider her cunning network ; the ant her treasury and accounts. All these are comparatively slaves, or people of vulgar business. But your fly, free in the air, free in the chamber—a black incarnation of caprice—wandering, investigating, flitting, flirting, feasting at his will, with rich variety of choice in feast, from the heaped sweets in the grocer's window to those of the butcher's back-yard, and from the galled place on your cab-horse's back, to the brown spot in the road, from which, as the hoof

disturbs him, he rises with angry republican buzz—what freedom is like his?

For captivity, again, perhaps your poor watch-dog is as sorrowful a type as you will easily find. Mine certainly is. The day is lovely, but I must write this, and cannot go out with him. He is chained in the yard, because I do not like dogs in rooms, and the gardener does not like dogs in gardens. He has no books,—nothing but his own weary thoughts for company, and a group of those free flies whom he snaps at, with sudden ill success. Such dim hope as he may have that I may yet take him out with me, will be, hour by hour, wearily disappointed; or, worse, darkened at once into a leaden despair by an authoritative “No”—too well understood. His fidelity only seals his fate; if he would not watch for me, he would be sent away, and go hunting with some happier master: but he watches, and is wise, and faithful, and miserable: and his high animal intellect only gives him the wistful powers of wonder, and sorrow, and desire, and affection, which embitter his captivity. Yet of the two, would we rather be watch-dog, or fly?

Indeed, the first point we have all to determine is not how free we are, but what kind of creatures we are. It is of small importance to any of us whether we get liberty; but of the greatest that we deserve it. Whether we can win it, fate must determine; but that we will be worthy of it, we

may ourselves determine; and the sorrowfullest fate, of all that we can suffer, is to have it, *without* deserving it.—*Q. A.*, III., § 148–150.

102. WISIE.—And my dog Wisie, was he dead too? It seems wholly wonderful to me at this moment that he should ever have died. He was a white Spitz, exactly like Carpaccio's dog in the picture of St. Jerome; and he came to me from a young Austrian officer, who had got tired of him,—the Count Thun, who afterwards fell at Solferino. Before the dog was used enough to us, George and I took him to Lido to give him a little sea bath. George was holding him by his fore-paws upright among the little crisp breakers. Wisie snatched them out of his hands, and ran at full speed—into Fairyland, like Frederick the Great at Mollwitz. He was lost on Lido for three days and nights, living by petty larceny, the fishermen and cottagers doing all they could to catch him; but they told me he “ran like a hare and leaped like a horse.”

At last, either overcome by hunger, or having made up his mind that even *my* service was preferable to liberty on Lido, he took the deep water in broad daylight, and swam straight for Venice. A fisherman saw him from a distance, rowed after him, took him, tired among the weeds, and brought him to me—the Madonna della Salute having been propitious to his repentant striving with the sea.

From that time he became an obedient and affectionate dog, though of extremely self-willed and self-possessed character. I was then living on the north side of St. Mark's Place, and he used to sit outside the window on the ledge at the base of its pillars greater part of the day, observant of the manners and customs of Venice. Returning to England, I took him over the St. Gothard, but found him entirely unappalled by any of the work of Devils on it—big or little. He saw nothing to trouble himself about in precipices, if they were wide enough to put his paws on; and the dog who had fled madly from a crisp sea wave, trotted beside the fall of the Reuss just as if it had been another White Dog, a little bigger, created out of foam.

Reaching Paris, he considered it incumbent upon him to appear unconscious of the existence of that city, or of the Tuileries gardens and Rue Rivoli, since they were not St. Mark's Place;—but, half asleep one evening, on a sofa in the entresol at Meurice's, and hearing a bark in the street which sounded Venetian,—sprang through the window in expectation of finding himself on the usual ledge—and fell fifteen feet to the pavement. As I ran down, I met him rushing up the hotel stairs, (he had gathered himself from the stones in an instant,) bleeding and giddy; he staggered round and round two or three times, and fell helpless on the floor. I don't know if young ladies' dogs faint, really, when they are

hurt. He, Wisie, did not faint, nor even moan, but he could not stir, except in cramped starts and shivers. I sent for what veterinary help was within reach, and heard that the dog might recover, if he could be kept quiet for a day or two in a dog-hospital. But my omnibus was at the door—for the London train. In the very turn and niche of time I heard that Macdonald of St. Martin's was in the hotel, and would take charge of Wisie for the time necessary. The poor little speechless, luckless, wistfully gazing doggie was tenderly put in a pretty basket, (going to be taken where? thinks the beating heart,) looks at his master to read what he can in the sad face—can make out nothing; is hurried out of the inexorable door, downstairs; finds himself more nearly dead next day, and among strangers. (*Two miles* away from Meurice's, along the Boulevard, it was.)

He takes and keeps counsel with himself on that matter. Drinks and eats what he is given, gratefully; swallows his medicine obediently; stretches his limbs from time to time. There was only a wicket gate, he saw, between the Boulevard and him. Silently, in the early dawn of the fourth or fifth day—I think—he leaped it, and along two miles of Parisian Boulevard came back to Meurice's.

I do not believe there was ever a more wonderful piece of instinct certified. For Macdonald

received him, in astonishment,—and Wisie trusted Macdonald to bring him to his lost master again. —*Præterita*, III. II.

103. LIBERTY.—There are liberties and liberties. Yonder torrent, crystal-clear, and arrow-swift, with its spray leaping into the air like white troops of fawns, is free enough. Lost, presently, amidst bankless, boundless marsh—soaking in slow shallowness, as it will, hither and thither, listless, among the poisonous reeds and unresisting slime—it is free also. We may choose which liberty we like,—the restraint of voiceful rock, or the dumb and edgeless shore of darkened sand. . . .

You will send your child, will you, into a room where a table is loaded with sweet wine and fruit—some poisoned, some not?—you will say to him, “Choose freely, my little child! It is so good for you to have freedom of choice; it forms your character—your individuality! If you take the wrong cup, or the wrong berry, you will die before the day is over, but you will have acquired the dignity of a Free child”?

You think that puts the case too sharply? I tell you, lover of liberty, there is no choice offered to you, but it is similarly between life and death. There is no act, nor option of act, possible, but the wrong deed, or option, has poison in it, which will stay in your veins thereafter for ever. Never more to all eternity can you be as you might

have been, had you not done that—chosen that. You have “formed your character,” forsooth! No! if you have chosen ill, you have Deformed it, and that for ever! In some choices, it had been better for you that a red-hot iron bar had struck you aside, scarred and helpless, than that you had so chosen. “You will know better next time!” No. Next time will never come. Next time the choice will be in quite another aspect—between quite different things,—you, weaker than you were by the evil into which you have fallen; it, more doubtful than it was, by the increased dimness of your sight. No one ever gets wiser by doing wrong, nor stronger. You will get wiser and stronger only by doing right, whether forced or not; the prime, the one need is to do *that*, under whatever compulsion, till you can do it without compulsion. And then you are a Man.

“What!” a wayward youth might perhaps answer, incredulously; “no one ever gets wiser by doing wrong? Shall I not know the world best by trying the wrong of it, and repenting? Have I not, even as it is, learned much by many of my errors?” Indeed, the effort by which partially you recovered yourself was precious; that part of your thought by which you discerned the error was precious. What wisdom and strength you kept, and rightly used, are rewarded; and in the pain and the repentance, and in the acquaintance with the aspects of folly and sin,

you have learned *something*; how much less than you would have learned in right paths, can never be told, but that it *is* less is certain. Your liberty of choice has simply destroyed for you so much life and strength, never regainable. It is true you now know the habits of swine, and the taste of husks: do you think your father could not have taught you to know better habits and pleasanter tastes, if you had stayed in his house; and that the knowledge you have lost would not have been more, as well as sweeter, than that you have gained? But "it so forms my individuality to be free!" Your individuality was given you by God, and in your race; and if you have any to speak of, you will want no liberty. You will want a den to work in, and peace, and light—no more,—in absolute need; if more, in anywise, it will still not be liberty, but direction, instruction, reproof, and sympathy. But if you have no individuality, if there is no true character nor true desire in you, then you will indeed want to be free. You will begin early; and, as a boy, desire to be a man; and, as a man, think yourself as good as every other. You will choose freely to eat, freely to drink, freely to stagger and fall, freely, at last to curse yourself and die. Death is the only real freedom possible to us: and that is consummate freedom,—permission for every particle in the rotting body to leave its neighbour particle, and shift for itself. You call it

“corruption” in the flesh ; but before it comes to that, all liberty is an equal corruption in mind. You ask for freedom of thought ; but if you have not sufficient grounds for thought, you have no business to think ; and if you have sufficient grounds, you have no business to think wrong. Only one thought is possible to you, if you are wise—your liberty is geometrically proportionate to your folly.

“But all this glory and activity of our age ; what are they owing to, but to our freedom of thought ?” In a measure, they are owing—what good is in them—to the discovery of many lies, and the escape from the power of evil. Not to liberty, but to the deliverance from evil or cruel masters. Brave men have dared to examine lies which had long been taught, not because they were *free*-thinkers, but because they were such stern and close thinkers that the lie could no longer escape them. Of course the restriction of thought, or of its expression, by persecution, is merely a form of violence, justifiable or not, as other violence is, according to the character of the persons against whom it is exercised, and the divine and eternal laws which it vindicates or violates. We must not burn a man alive for saying that the Athanasian creed is ungrammatical, nor stop a bishop’s salary because we are getting the worst of an argument with him ; neither must we let drunken men howl in the public streets at

night. There is much that is true in the part of Mr. Mill's essay on Liberty which treats of freedom of thought ; some important truths are there beautifully expressed, but many, quite vital, are omitted ; and the balance, therefore, is wrongly struck. The liberty of expression, with a great nation, would become like that in a well-educated company, in which there is indeed freedom of speech, but not of clamour ; or like that in an ordinary senate, in which men who deserve to be heard, are heard in due time, and under determined restrictions. The degree of liberty you can rightly grant to a number of men is commonly in the inverse ratio of their desire for it ; and a general hush, or call to order, would be often very desirable in this England of ours. For the rest, of any good or evil extant, it is impossible to say what measure is owing to restraint, and what to licence, where the right is balanced between them. I was not a little provoked one day, a summer or two since in Scotland, because the Duke of Athol hindered me from examining the gneiss and slate junctions in Glen Tilt, at the hour convenient to me : but I saw them at last, and in quietness ; and to the very restriction that annoyed me, owed, probably, the fact of their being in existence, instead of being blasted away by a mob-company ; while the "free" paths and inlets of Loch Katrine and the Lake of Geneva are for ever trampled down and destroyed, not by

one duke, but by tens of thousands of ignorant tyrants.

So, a Dean and Chapter may, perhaps, unjustifiably charge me twopence for seeing a cathedral;—but your free mob pulls spire and all down about my ears, and I can see no more for ever. And even if I cannot get up to the granite junctions in the glen, the stream comes down from them pure to the Garry: but in Beddington Park I am stopped by the newly erected fence of a building speculator; and the bright Wandel (Pope's "blue transparent Vandalis"), of divine waters as Castaly, is filled by the free public with old shoes, obscene crockery, and ashes.—*Q. A.*, III., § 144, 151–155.

104. CARSHALTON POOL.—Twenty years ago, there was no lovelier piece of lowland scenery in South England, nor any more pathetic, in the world, by its expression of sweet human character and life, than that immediately bordering on the sources of the Wandel, and including the low moors of Addington, and the villages of Beddington and Carshalton, with all their pools and streams. No clearer or diviner waters ever sang with constant lips of the hand which "giveth rain from heaven;" no pastures ever lightened in spring-time with more passionate blossoming; no sweeter homes ever hallowed the heart of the passer-by with their pride of peaceful gladness,—fain-hidden—yet full-confessed. The place

remains (1870) nearly unchanged in its larger features; but with deliberate mind I say, that I have never seen anything so ghastly in its inner tragic meaning,—not in Pisan Maremma,—not by Campagna tomb,—not by the sand-isles of the Torcellan shore,—as the slow stealing of aspects of reckless, indolent, animal neglect, over the delicate sweetness of that English scene: nor is any blasphemy or impiety, any frantic saying, or godless thought, more appalling to me, using the best power of judgment I have to discern its sense and scope, than the insolent defiling of those springs by the human herds that drink of them. Just where the welling of stainless water, trembling and pure, like a body of light, enters the pool of Carshalton, cutting itself a radiant channel down to the gravel, through warp of feathery weeds, all waving, which it traverses with its deep threads of clearness, like the chalcedony in moss-agate, starred here and there with the white grenouillette; just in the very rush and murmur of the first spreading currents, the human wretches of the place cast their street and house foulness; heaps of dust and slime, and broken shreds of old metal, and rags of putrid clothes; which, having neither energy to cart away, nor decency enough to dig into the ground, they thus shed into the stream, to diffuse what venom of it will float and melt, far away, in all places where God meant those waters to bring

joy and health. And, in a little pool behind some houses farther in the village, where another spring rises, the shattered stones of the well, and of the little fretted channel which was long ago built and traced for it by gentler hands, lie scattered, each from each, under a ragged bank of mortar, and scoria, and bricklayer's refuse, on one side, which the clean water nevertheless chastises to purity; but it cannot conquer the dead earth beyond: and there, circled and coiled under festering scum, the stagnant edge of the pool effaces itself into a slope of black slime, the accumulation of indolent years. Half-a-dozen men, with one day's work, could cleanse those pools, and trim the flowers about their banks, and make every breath of summer air above them rich with cool balm; and every glittering wave medicinal, as if it ran, troubled only of angels, from the porch of Bethesda. But that day's work is never given, nor, I suppose, will be; nor will any joy be possible to heart of man, for evermore, about those wells of English waters.—*C. W. O.*, Introduction, § 1.

105. SLAVERY.—Do you know what slavery means? Suppose a gentleman taken by a Barbary corsair—set to field-work; chained and flogged to it from dawn to eve. Need he be a slave therefore? By no means; he is but a hardly-treated prisoner. There is some work which the

Barbary corsair will not be able to make him do; such work as a Christian gentleman may not do, that he will not, though he die for it. Bound and scourged he may be, but he has heard of a Person's being bound and scourged before now, who was not therefore a slave. He is not a whit more slave for that. But suppose he take the pirate's pay, and stretch his back at piratical oars, for due salary, how then? Suppose for fitting price he betray his fellow prisoners, and take up the scourge instead of enduring it—become the smiter instead of the smitten, at the African's bidding—how then? Of all the sheepish notions in our English public "mind," I think the simplest is that slavery is neutralised when you are well paid for it! Whereas it is precisely the fact of its being paid for which makes it complete. A man who has been sold by another, may be but half a slave or none; but the man who has sold himself! He is the accurately Finished Bondsman.—*Cestus of Aglaia*, IV. (*O. R.*, I., § 362).

106. CHIVALRIC OBEDIENCE.—In all Christian ages which have been remarkable for their purity of progress, there has been absolute yielding of obedient devotion, by the lover, to his mistress. I say *obedient*;—not merely enthusiastic and worshipping in imagination, but entirely subject, receiving from the beloved woman, however young, not only the encouragement, the praise, and the

reward of all toil, but, so far as any choice is open, or any question difficult of decision, the *direction* of all toil. That chivalry, to the abuse and dishonour of which are attributable primarily whatever is cruel in war, unjust in peace, or corrupt and ignoble in domestic relations; and to the original purity and power of which we owe the defence alike of faith, of law, and of love;—that chivalry, I say, in its very first conception of honourable life, assumes the subjection of the young knight to the command—should it even be the command in caprice—of his lady. It assumes this, because its masters knew that the first and necessary impulse of every truly taught and knightly heart is this of blind service to its lady: that where that true faith and captivity are not, all wayward and wicked passion must be; and that in this rapturous obedience to the single love of his youth, is the sanctification of all man's strength, and the continuance of all his purposes. And this, not because such obedience would be safe, or honourable, were it ever rendered to the unworthy; but because it ought to be impossible for every noble youth—it *is* impossible for every one rightly trained—to love any one whose gentle counsel he cannot trust, or whose prayerful command he can hesitate to obey.—*S. and L.*, II., § 64.

107. MAN AND WOMAN.—We are foolish,

and without excuse foolish, in speaking of the "superiority" of one sex to the other, as if they could be compared in similar things. Each has what the other has not: each completes the other, and is completed by the other: they are in nothing alike, and the happiness and perfection of both depends on each asking and receiving from the other what the other only can give.

Now their separate characters are briefly these. The man's power is active, progressive, defensive. He is eminently the doer, the creator, the discoverer, the defender. His intellect is for speculation and invention; his energy for adventure, for war, and for conquest wherever war is just, wherever conquest necessary. But the woman's power is for rule, not for battle,—and her intellect is not for invention or creation, but for sweet ordering, arrangement, and decision. She sees the qualities of things, their claims, and their places. Her great function is Praise: she enters into no contest, but infallibly adjudges the crown of contest. By her office, and place, she is protected from all danger and temptation. The man, in his rough work in the open world, must encounter all peril and trial; to him, therefore, must be the failure, the offence, the inevitable error: often he must be wounded, or subdued; often misled; and *always* hardened. But he guards the woman from all this; within his house, as ruled by her, unless she herself has sought it, need enter no

danger, no temptation, no cause of error or offence. This is the true nature of home—it is the place of Peace; the shelter, not only from all injury, but from all terror, doubt, and division. In so far as it is not this, it is not home; so far as the anxieties of the outer life penetrate into it, and the inconsistently-minded, unknown, unloved, or hostile society of the outer world is allowed by either husband or wife to cross the threshold, it ceases to be home; it is then only a part of that outer world which you have roofed over, and lighted fire in. But so far as it is a sacred place, a vestal temple, a temple of the hearth watched over by Household Gods, before whose faces none may come but those whom they can receive with love,—so far as it is this, and roof and fire are types only of a nobler shade and light,—shade as of the rock in a weary land, and light as of the Pharos in the stormy sea;—so far it vindicates the name, and fulfils the praise, of Home.

And wherever a true wife comes, this home is always round her. The stars only may be over her head; the glowworm in the night-cold grass may be the only fire at her foot: but home is yet wherever she is; and for a noble woman it stretches far round her, better than ceiled with cedar, or painted with vermilion, shedding its quiet light far, for those who else were homeless.—*S. and L.*, II., § 67-68.

108. COURTSHIP.—When a youth is fully in love with a girl, and feels that he is wise in loving her, he should at once tell her so plainly, and take his chance bravely, with other suitors. No lover should have the insolence to think of being accepted at once, nor should any girl have the cruelty to refuse at once; without severe reasons. If she simply doesn't like him, she may send him away for seven years or so—he vowing to live on cresses, and wear sackcloth meanwhile, or the like penance: if she likes him a little, or thinks she might come to like him in time, she may let him stay near her, putting him always on sharp trial to see what stuff he is made of, and requiring, figuratively, as many lion-skins or giants' heads as she thinks herself worth. The whole meaning and power of true courtship is Probation; and it oughtn't to be shorter than three years at least,—seven is, to my own mind, the orthodox time. And these relations between the young people should be openly and simply known, not to their friends only, but to everybody who has the least interest in them: and a girl worth anything ought to have always half a dozen or so of suitors under vow for her.

There are no words strong enough to express the general danger and degradation of the manners of mob-courtship, as distinct from these, which have become the fashion,—almost the law,—in modern times: when in a miserable confusion of

candlelight, moonlight, and limelight—and anything but daylight,—in indecently attractive and insanely expensive dresses, in snatched moments, in hidden corners, in accidental impulses and dismal ignorances, young people smirk and ogle and whisper and whimper and sneak and stumble and flutter and fumble and blunder into what they call Love;—expect to get whatever they like the moment they fancy it, and are continually in the danger of losing all the honour of life for a folly, and all the joy of it by an accident.—*F. C.*, Letter 90.

109. BEAUTY.—The question, “What are plain girls to do?” requires us first to understand clearly what “plainness” is. No girl who is well bred, kind, and modest, is ever offensively plain; all real deformity means want of manners, or of heart. I may say, in defence of my own constant praise of beauty, that I do not attach half the real importance to it which is assumed in ordinary fiction;—above all, in the pages of the periodical which best represents, as a whole, the public mind of England. As a rule, throughout the whole seventy-volume series of “Punch,”—first by Leech and then by Du Maurier,—all nice girls are represented as pretty; all nice women, as both pretty and well dressed; and if the reader will compare a sufficient number of examples extending over a series of years, he will find the moral lesson more

and more enforced by this most popular authority, that all real ugliness in either sex means some kind of hardness of heart, or vulgarity of education. The ugliest man, for all in all, in "Punch" is Sir Gorgius Midas,—the ugliest women, those who are unwilling to be old. Generally speaking indeed, "Punch" is cruel to women above a certain age; but this is the expression of a real truth in modern England, that the ordinary habits of life and modes of education produce great plainness of *mind* in middle-aged women.

I recollect three examples in the course of only the last four or five months of railway travelling. The most interesting and curious one was a young woman evidently of good mercantile position, who came into the carriage with her brother out of one of the manufacturing districts. Both of them gave me the idea of being amiable in disposition, and fairly clever, perhaps a little above the average in natural talent; while the sister had good features, and was not much over thirty. But the face was fixed in an iron hardness, and keenly active incapacity of any deep feeling or subtle thought, which pained me almost as much as a physical disease would have done; and it was an extreme relief to me when she left the carriage. Another type, pure cockney, got in one day at Paddington, a girl of the lower middle class, round-headed, and with the most profound and sullen expression of discontent, complicated with ill-temper, that I ever

saw on human features :—I could not at first be certain how far this expression was innate, and how far superinduced ; but she presently answered the question by tearing open the paper she had bought, with the edge of her hand, into jags half an inch deep, all the way across.

The third, a far more common type, was of self-possessed and all-engrossing selfishness, complicated with stupidity ;—a middle-aged woman with a novel, who put up her window and pulled down both blinds (side and central) the moment she got in, and read her novel till she fell asleep over it : presenting in that condition one of the most stolidly disagreeable countenances which could be shaped out of organic clay.

In both these latter cases, the offensiveness of feature implied, for one thing, a constant vexation, and *diffused* agony or misery, endured through every moment of conscious life, together with total dulness of sensation respecting delightful and beautiful things ; the opposite state of life, under blessing, being represented by the Venice-imagined beauty of St. Ursula, in whose countenance what beauty there may be found (I have known several people who saw none, and indeed Carpaccio has gifted her with no dazzling comeliness) depends mainly on the opposite character of *diffused* joy, and ecstasy in peace.

And in places far too many to indicate, both of Fors and my Oxford lectures, I have spoken again

and again of this radiant expression of cheerfulness, as a primal element of Beauty, quoting Chaucer largely on the matter; and clinching all, somewhere, (I can't look for the place now,) by saying that the wickedness of any nation might be briefly measured by observing how far it had made its girls miserable.

I meant this quality of cheerfulness to be included above, in the word "well-bred," meaning original purity of race (Chaucer's "*debonnaireté*") disciplined in courtesy, and the exercises which develop animal power and spirit. I do not in the least mean to limit the word to aristocratic birth and education. Gotthelf's Swiss heroine, Freneli, to whom I have dedicated, in *Proserpina*, the pansy of the Wengern Alp, is only a farm-servant; and Scott's Jeanie Deans is of the same type in Scotland. And among virtuous nations, or the portions of them who remain virtuous, as the Tyrolese and Bavarian peasants, the Tuscans, and the mountain and sea-shore races of France, England, Scotland, and Ireland, almost everybody is "well-bred," and the girlish beauty universal. Here in Coniston it is almost impossible to meet a child whom it is not a real sorrow again to lose sight of. So that the second article of St. George's creed, "I believe in the nobleness of human nature," may properly be considered as involving the farther though minor belief in the loveliness of the human form; and in my next course of work at Oxford, I shall

have occasion to insist at some length on the reality and frequency of beauty in ordinary life, as it has been shown us by the popular art of our own day. This frequency of it, however, supposing we admit the fact, in no wise diminishes the burden to be sustained by girls who are conscious of possessing less than these ordinary claims to admiration; nor am I in the least minded to recommend the redemption of their loneliness by any more than common effort to be good or wise. On the contrary, the prettier a girl is, the more it becomes her duty to try to be good; and little can be hoped of attempts to cultivate the understanding, which have only been provoked by a jealous vanity. The real and effective sources of consolation will be found in the quite opposite direction, of self-forgetfulness;—in the cultivation of sympathy with others, and in turning the attention and the heart to the daily pleasures open to every young creature born into this marvellous universe. The landscape of the lover's journey may indeed be invested with æthereal colours, and his steps be measured to heavenly tunes unheard of other ears; but there is no sense, because these selfish and temporary raptures are denied to us, in refusing to see the sunshine on the river, or hear the lark's song in the sky. To some of my young readers, the saying may seem a hard one; but they may rest assured that the safest and purest joys of human life rebuke the violence of its

passions ; that they are obtainable without anxiety, and memorable without regret.—*F. C.*, Letter 91.

110. DRESS.—The man and woman are meant by God to be perfectly noble and beautiful in each other's eyes. That dress is right which makes them so. The best dress is that which is beautiful in the eyes of noble and wise persons.

Right dress is therefore that which is fit for the station in life, and the work to be done in it ; and which is otherwise graceful—becoming—lasting—healthful—and easy ; on occasion, splendid ; *always* as beautiful as possible.

Right dress is therefore strong—simple—radiantly clean—carefully put on—carefully kept.

Cheap dress, bought for cheapness' sake, and costly dress bought for costliness' sake, are *both* abominations. Right dress is bought *for* its worth, and *at* its worth ; and bought only when wanted.

Beautiful dress is chiefly beautiful in colour—in harmony of parts, and in mode of putting on and wearing. Rightness of mind is in nothing more shown than in the mode of wearing simple dress.

Ornamentation involving design, such as embroidery, etc., produced *solely* by industry of *hand*, is highly desirable in the state dresses of all classes, down to the lowest peasantry.

National costume, wisely adopted and consistently worn, is not only desirable but necessary in right national organisation. Obeying fashion is a great folly, and a greater crime; but gradual changes in dress properly accompany a healthful national development.

Dress worn for the sake of vanity, or coveted in jealousy, is as evil as anything else similarly so abused. A woman should earnestly desire to be beautiful, as she should desire to be intelligent; her dress should be as studied as her words; but if the one is worn or the other spoken in vanity or insolence, both are equally criminal.—*Monthly Packet*, Nov. 1863 (*A. C.*, II., p. 227).

III. WOMAN'S WORK.—Generally, we are under an impression that a man's duties are public, and a woman's private. But this is not altogether so. A man has a personal work or duty, relating to his own home, and a public work or duty, which is the expansion of the other, relating to the state. So a woman has a personal work or duty, relating to her own home, and a public work or duty, which is also the expansion of that.

Now, the man's work for his own home is, as has been said, to secure its maintenance, progress, and defence; the woman's to secure its order, comfort, and loveliness.

Expand both these functions. The man's duty,

as a member of a commonwealth, is to assist in the maintenance, in the advance, in the defence of the state. The woman's duty, as a member of the commonwealth, is to assist in the ordering, in the comforting, and in the beautiful adornment of the state.

What the man is at his own gate, defending it, if need be, against insult and spoil, that also, not in a less, but in a more devoted measure, he is to be at the gate of his country, leaving his home, if need be, even to the spoiler, to do his more incumbent work there.

And, in like manner, what the woman is to be within her gates, as the centre of order, the balm of distress, and the mirror of beauty: that she is also to be without her gates, where order is more difficult, distress more imminent, loveliness more rare.

And as within the human heart there is always set an instinct for all its real duties,—an instinct which you cannot quench, but only warp and corrupt if you withdraw it from its true purpose:—as there is the intense instinct of love, which, rightly disciplined, maintains all the sanctities of life, and, misdirected, undermines them; and *must* do either the one or the other;—so there is in the human heart an inextinguishable instinct, the love of power, which, rightly directed, maintains all the majesty of law and life, and misdirected, wrecks them.

Deep rooted in the innermost life of the heart of man, and of the heart of woman, God set it there, and God keeps it there. Vainly, as falsely, you blame or rebuke the desire of power!—For Heaven's sake, and for Man's sake, desire it all you can. But *what* power? That is all the question. Power to destroy? the lion's limb, and the dragon's breath? Not so. Power to heal, to redeem, to guide and to guard. Power of the sceptre and shield; the power of the royal hand that heals in touching,—that binds the fiend, and looses the captive; the throne that is founded on the rock of Justice, and descended from only by steps of Mercy. Will you not covet such power as this, and seek such throne as this, and be no more housewives, but queens? —*S. and L.*, II., § 86, 87.

112. WOMAN'S MISSION.—“Prince of Peace.” Note that name. When kings rule in that name, and nobles, and the judges of the earth, they also, in their narrow place, and mortal measure, receive the power of it. There are no other rulers than they: other rule than theirs is but *misrule*; they who govern verily “*Dei gratiâ*” are all princes, yes, or princesses, of Peace. There is not a war in the world, no, nor an injustice, but you women are answerable for it; not in that you have provoked, but in that you have not hindered. Men, by their nature, are prone to fight; they will fight

for any cause, or for none. It is for you to choose their cause for them, and to forbid them when there is no cause. There is no suffering, no injustice, no misery in the earth, but the guilt of it lies with you. Men can bear the sight of it, but you should not be able to bear it. Men may tread it down without sympathy in their own struggle; but men are feeble in sympathy, and contracted in hope; it is you only who can feel the depths of pain, and conceive the way of its healing. Instead of trying to do this, you turn away from it; you shut yourselves within your park walls and garden gates; and you are content to know that there is beyond them a whole world in wilderness—a world of secrets which you dare not penetrate, and of suffering which you dare not conceive.

I tell you that this is to me quite the most amazing among the phenomena of humanity. I am surprised at no depths to which, when once warped from its honour, that humanity can be degraded. I do not wonder at the miser's death, with his hands, as they relax, dropping gold. I do not wonder at the sensualist's life, with the shroud wrapped about his feet. I do not wonder at the single-handed murder of a single victim, done by the assassin in the darkness of the railway, or reed-shadow of the marsh. I do not even wonder at the myriad-handed murder of multitudes, done boastfully in the daylight, by

the frenzy of nations, and the immeasurable, unimaginable guilt, heaped up from hell to heaven, of their priests, and kings. But this is wonderful to me—oh, how wonderful!—to see the tender and delicate woman among you, with her child at her breast, and a power, if she would wield it, over it, and over its father, purer than the air of heaven, and stronger than the seas of earth—nay, a magnitude of blessing which her husband would not part with for all that earth itself, though it were made of one entire and perfect chrysolite:—to see her abdicate this majesty to play at precedence with her next-door neighbour! This is wonderful—oh, wonderful!—to see her, with every innocent feeling fresh within her, go out in the morning into her garden to play with the fringes of its guarded flowers, and lift their heads when they are drooping, with her happy smile upon her face, and no cloud upon her brow, because there is a little wall around her place of peace; and yet she knows, in her heart, if she would only look for its knowledge, that, outside of that little rose-covered wall, the wild grass, to the horizon, is torn up by the agony of men, and beat level by the drift of their life-blood. . . .

You have heard it said—(and I believe there is more than fancy even in that saying, but let it pass for a fanciful one)—that flowers only flourish rightly in the garden of some one who loves them. I know you would like that to be true; you would

think it a pleasant magic if you could flush your flowers into brighter bloom by a kind look upon them: nay, more, if your look had the power, not only to cheer, but to guard;—if you could bid the black blight turn away, and the knotted caterpillar spare—if you could bid the dew fall upon them in the drought, and say to the south wind, in frost—“Come, thou south, and breathe upon my garden, that the spices of it may flow out.” This you would think a great thing? And do you think it not a greater thing, that all this, (and how much more than this!) you *can* do, for fairer flowers than these—flowers that could bless you for having blessed them, and will love you for having loved them;—flowers that have thoughts like yours, and lives like yours; and which, once saved, you save for ever? Is this only a little power? Far among the moorlands and the rocks,—far in the darkness of the terrible streets,—these feeble florets are lying, with all their fresh leaves torn, and their stems broken—will you never go down to them, nor set them in order in their little fragrant beds, nor fence them, in their trembling, from the fierce wind? Shall morning follow morning, for you, but not for them; and the dawn rise to watch, far away, those frantic Dances of Death; but no dawn rise to breathe upon these living banks of wild violet, and woodbine, and rose; nor call to you, through your casement,—call (not giving you the name of the

English poet's lady, but the name of Dante's great Matilda,* who on the edge of happy Lethe, stood, wreathing flowers with flowers), saying,—

“Come into the garden, Maud,
For the black bat, night, has flown,
And the woodbine spices are wafted abroad
And the musk of the roses blown”?

Will you not go down among them?—among those sweet living things, whose new courage, sprung from the earth with the deep colour of heaven upon it, is starting up in strength of goodly spire; and whose purity, washed from the dust, is opening, bud by bud, into the flower of promise;—and still they turn to you and for you, “The Larkspur listens—I hear, I hear! And the Lily whispers—I wait.”

Did you notice that I missed two lines when I read you that first stanza; and think that I had forgotten them? Hear them now:—

“Come into the garden, Maud,
For the black bat, night, has flown.
Come into the garden, Maud,
I am here at the gate, alone.”

Who is it, think you, who stands at the gate of this sweeter garden, alone, waiting for you? Did you ever hear, not of a Maud, but a Madeleine, who went down to her garden in the dawn, and found One waiting at the gate, whom she supposed

* See **First Series** of these Selections, § 51.

to be the gardener? Have you not sought Him often: sought Him in vain, all through the night; sought Him in vain at the gate of that old garden where the fiery sword is set? He is never there; but at the gate of *this* garden He is waiting always—waiting to take your hand—ready to go down to see the fruits of the valley, to see whether the vine has flourished, and the pomegranate budded. There you shall see with Him the little tendrils of the vines that His hand is guiding—there you shall see the pomegranate springing where His hand cast the sanguine seed;—more: you shall see the troops of the angel keepers that, with their wings, wave away the hungry birds from the pathsides where He has sown, and call to each other between the vineyard rows, “Take us the foxes, the little foxes, that spoil the vines, for our vines have tender grapes.” Oh—you queens—you queens; among the hills and happy greenwood of this land of yours, shall the foxes have holes and the birds of the air have nests; and in your cities shall the stones cry out against you, that they are the only pillows where the Son of Man can lay His head?—*S. and L.*, II., § 91-95.

113. THE DISCIPLINE OF WAR.—I have given a considerable part of my life to the investigation of Venetian painting; and the result of that enquiry was my fixing upon one man as the

greatest of all Venetians, and therefore, as I believed, of all painters whatsoever. I formed this faith (whether right or wrong matters at present nothing) in the supremacy of the painter Tintoret, under a roof covered with his pictures; and of those pictures, three of the noblest were then in the form of shreds of ragged canvas, mixed up with the laths of the roof, rent through by three Austrian shells. Now, it is not every lecturer who *could* tell you that he had seen three of his favourite pictures torn to rags by bombshells. And after such a sight, it is not every lecturer who *would* tell you that, nevertheless, war was the foundation of all great art.

Yet the conclusion is inevitable, from any careful comparison of the states of great historic races at different periods. Merely to show you what I mean, I will sketch for you, very briefly, the broad steps of the advance of the best art of the world. The first dawn of it is in Egypt; and the power of it is founded on the perpetual contemplation of death, and of future judgment, by the mind of a nation of which the ruling caste were priests, and the second, soldiers. The greatest works produced by them are sculptures of their kings going out to battle, or receiving the homage of conquered armies. And you must remember also, as one of the great keys to the splendour of the Egyptian nation, that the priests were not occupied in theology only. Their theology was the basis of

practical government and law ; so that they were not so much priests as religious judges ; the office of Samuel, among the Jews, being as nearly as possible correspondent to theirs.

All the rudiments of art then, and much more than the rudiments of all science, were laid first by this great warrior-nation, which held in contempt all mechanical trades, and in absolute hatred the peaceful life of shepherds. From Egypt art passes directly into Greece, where all poetry, and all painting, are nothing else than the description, praise, or dramatic representation of war, or of the exercises which prepare for it, in their connection with offices of religion. All Greek institutions had first respect to war ; and their conception of it, as one necessary office of all human and divine life, is expressed simply by the images of their guiding gods. Apollo is the god of all wisdom of the intellect ; he bears the arrow and the bow, before he bears the lyre. Again, Athena is the goddess of all wisdom in conduct. Yet it is by the helmet and the shield, oftener than by the shuttle, that she is distinguished from other deities.

There were, however, two great differences in principle between the Greek and the Egyptian theories of policy. In Greece there was no soldier caste ; every citizen was necessarily a soldier. And, again, while the Greeks rightly despised mechanical arts as much as the Egyptians, they did not make the fatal mistake of despising

agricultural and pastoral life ; but perfectly honoured both. These two conditions of truer thought raise them quite into the highest rank of wise manhood that has yet been reached ; for all our great arts, and nearly all our great thoughts, have been borrowed or derived from them. Take away from us what they have given ; and we hardly can imagine how low the modern European would stand.

Now, you are to remember, in passing to the next phase of history, that though you *must* have war to produce art—you must also have much more than war ; namely, an art-instinct or genius in the people ; and that, though all the talent for painting in the world won't make painters of you, unless you have a gift for fighting as well, you may have the gift for fighting, and none for painting. Now, in the next great dynasty of soldiers, the art-instinct is wholly wanting. I have not yet investigated the Roman character enough to tell you the causes of this ; but I believe, paradoxical as it may seem to you, that however truly the Roman might say of himself that he was born of Mars, and suckled by the wolf, he was nevertheless, at heart, more of a farmer than a soldier. The exercises of war were with him practical, not poetical ; his poetry was in domestic life only, and the object of battle, "*pacis imponere morem.*" And the arts are extinguished in his hands, and do not rise again, until, with Gothic chivalry, there

comes back into the mind of Europe a passionate delight in war itself, for the sake of war. And then, with the romantic knighthood which can imagine no other noble employment,—under the fighting kings of France, England, and Spain ; and, under the fighting dukeships and citizenships of Italy, art is born again, and rises to her height in the great valleys of Lombardy and Tuscany, through which there flows not a single stream, from all their Alps or Apennines, that did not once run dark red from battle ; and it reaches its culminating glory in the city which gave to history the most intense type of soldiership yet seen among men ; —the city whose armies were led in their assault by their king, led through it to victory by their king, and so led, though that king of theirs was blind, and in the extremity of his age.

And from this time forward, as peace is established or extended in Europe, the arts decline. They reach an unparalleled pitch of costliness, but lose their life, enlist themselves at last on the side of luxury and various corruption, and, among wholly tranquil nations, wither utterly away ; remaining only in partial practice among races who, like the French and us, have still the minds, though we cannot all live the lives, of soldiers.

“It may be so,” I can suppose that a philanthropist might exclaim. “Perish then the arts, if they can flourish only at such a cost. What worth is there in toys of canvas and stone, if

compared to the joy and peace of artless domestic life?" And the answer is—truly, in themselves, none. But as expressions of the highest state of the human spirit, their worth is infinite. As results they may be worthless, but, as signs, they are above price. For it is an assured truth that, whenever the faculties of men are at their fulness, they *must* express themselves by art; and to say that a state is without such expression, is to say that it is sunk from its proper level of manly nature. So that, when I tell you that war is the foundation of all the arts, I mean also that it is the foundation of all the high virtues and faculties of men.

It is very strange to me to discover this; and very dreadful—but I saw it to be quite an undeniable fact. The common notion that peace and the virtues of civil life flourished together, I found to be wholly untenable. Peace and the *vices* of civil life only flourish together. We talk of peace and learning, and of peace and plenty, and of peace and civilisation; but I found that those were not the words which the Muse of History coupled together: that, on her lips, the words were—peace, and sensuality—peace, and selfishness—peace, and death. I found, in brief, that all great nations learned their truth of word, and strength of thought, in war; that they were nourished in war, and wasted by peace; taught by war, and deceived by peace; trained by war, and betrayed

by peace ;—in a word, that they were born in war, and expired in peace.

Yet now note carefully, in the second place, it is not *all* war of which this can be said—nor all dragon's teeth, which, sown, will start up into men. It is not the rage of a barbarian wolf-flock, as under Genseric or Suwarrow ; nor the habitual restlessness and rapine of mountaineers, as on the old borders of Scotland ; nor the occasional struggle of a strong peaceful nation for its life, as in the wars of the Swiss with Austria ; nor the contest of merely ambitious nations for extent of power, as in the wars of France under Napoleon, or the just terminated war in America. None of these forms of war build anything but tombs. But the creative, or foundational, war is that in which the natural restlessness and love of contest among men are disciplined, by consent, into modes of beautiful—though it may be fatal—play : in which the natural ambition and love of power of men are disciplined into the aggressive conquest of surrounding evil : and in which the natural instincts of self-defence are sanctified by the nobleness of the institutions, and purity of the households which they are appointed to defend. To such war as this all men are born ; in such war as this any man may happily die ; and out of such war as this have arisen throughout the extent of past ages, all the highest sanctities and virtues of humanity.—*C. W. O.*, III., § 87–95.

114. CHIVALRIC AND MODERN WARFARE.

—Now, remember, whatever virtue or goodliness there may be in this game of war, rightly played, there is none when you thus play it with a multitude of human pawns.

If you, the gentlemen of this or any other kingdom, choose to make your pastime of contest, do so, and welcome; but set not up these unhappy peasant-pieces upon the chequer of forest and field. If the wager is to be of death, lay it on your own heads, not theirs. A goodly struggle in the Olympic dust, though it be the dust of the grave, the gods will look upon, and be with you in; but they will not be with you, if you sit on the sides of the amphitheatre, whose steps are the mountains of earth, whose arena its valleys, to urge your peasant millions into gladiatorial war. You also, you tender and delicate women, for whom, and by whose command, all true battle has been, and must ever be; you would perhaps shrink now, though you need not, from the thought of sitting as queens above set lists where the jousting game might be mortal. How much more, then, ought you to shrink from the thought of sitting above a theatre pit in which even a few condemned slaves were slaying each other only for your delight! And do you *not* shrink from the *fact* of sitting above a theatre pit, where,—not condemned slaves,—but the best and bravest of the poor sons of your people, slay each other,—

not man to man;—as the coupled gladiators; but race to race, in duel of generations? You would tell me, perhaps, that you do not sit to see this; and it is, indeed, true that the women of Europe—those who have no heart-interest of their own at peril in the contest—draw the curtains of their boxes, and muffle the openings; so that from the pit of the circus of slaughter there may reach them only at intervals a half-heard cry, and a murmur as of the wind's sighing, when myriads of souls expire. They shut out the death-cries; and are happy, and talk wittily among themselves. That is the utter literal fact, of what our ladies do in their pleasant lives.

Nay, you might answer, speaking with them—“We do not let these wars come to pass for our play, nor by our carelessness; we cannot help them. How can any final quarrel of nations be settled otherwise than by war?”

I cannot now delay to tell you how political quarrels might be otherwise settled. But grant that they cannot. Grant that no law of reason can be understood by nations; no law of justice submitted to by them; and that, while questions of a few acres, and of petty cash, can be determined by truth and equity, the questions which are to issue in the perishing or saving of kingdoms can be determined only by the truth of the sword, and the equity of the rifle. Grant this, and even

then, judge if it will always be necessary for you to put your quarrel into the hearts of your poor, and sign your treaties with peasants' blood. You would be ashamed to do this in your own private position and power. Why should you not be ashamed also to do it in public place and power? If you quarrel with your neighbour, and the quarrel be indeterminable by law, and mortal, you and he do not send your footmen to Battersea fields to fight it out; nor do you set fire to his tenants' cottages, nor spoil their goods. You fight out your quarrel yourselves, and at your own danger, if at all. And you do not think it materially affects the arbitrament that one of you has a larger household than the other; so that, if the servants or tenants were brought into the field with their masters, the issue of the contest could not be doubtful? You either refuse the private duel, or you practise it under laws of honour, not of physical force; that so it may be, in a manner, justly concluded. Now the just or unjust conclusion of the private feud is of little moment, while the just or unjust conclusion of the public feud is of eternal moment: and yet, in this public quarrel, you take your servants' sons from their arms to fight for it, and your servants' food from their lips to support it; and the black seal on the parchment of your treaties of peace are the deserted hearth, and the fruitless field.—*C. W. O.*, III., § 97, 98.

115. THE BURDEN OF ENGLAND.—When men are rightly occupied, their amusement grows out of their work, as the colour-petals out of a fruitful flower ;—when they are faithfully helpful and compassionate, all their emotions become steady, deep, perpetual, and vivifying to the soul as the natural pulse to the body. But now, having no true business, we pour our whole masculine energy into the false business of money-making ; and having no true emotion, we must have false emotions dressed up for us to play with, not innocently, as children with dolls, but guiltily and darkly, as the idolatrous Jews with their pictures on cavern walls, which men had to dig to detect. The justice we do not execute, we mimic in the novel and on the stage ; for the beauty we destroy in nature, we substitute the metamorphosis of the pantomime, and (the human nature of us imperatively requiring awe and sorrow of *some* kind) for the noble grief we should have borne with our fellows, and the pure tears we should have wept with them, we gloat over the pathos of the police court, and gather the night-dew of the grave.

There is a curious type of us given in one of the lovely, neglected works of the last of our great painters. It is a drawing of Kirkby Lonsdale churchyard, and of its brook, and valley, and hills, and folded morning sky beyond. And unmindful alike of these, and of the dead who have left these for other valleys and for other skies, a group of

schoolboys have piled their little books upon a grave, to strike them off with stones. So, also, we play with the words of the dead that would teach us, and strike them far from us with our bitter, reckless will; little thinking that those leaves which the wind scatters had been piled, not only upon a gravestone, but upon the seal of an enchanted vault—nay, the gate of a great city of sleeping kings, who would awake for us, and walk with us, if we knew but how to call them by their names. How often, even if we lift the marble entrance gate, do we but wander among those old kings in their repose, and finger the robes they lie in, and stir the crowns on their foreheads, and still they are silent to us, and seem but a dusty imagery; because we know not the incantation of the heart that would wake them;—which, if they once heard, they would start up to meet us in their power of long ago, narrowly to look upon us, and consider us; and, as the fallen kings of Hades meet the newly fallen, saying, “Art thou also become weak as we—art thou also become one of us?” so would these kings, with their undimmed, unshaken diadems, meet us, saying, “Art thou also become pure and mighty of heart as we? art thou also become one of us?”

Mighty of heart, mighty of mind—“magnanimous”—to be this, is indeed to be great in life; to become this increasingly, is, indeed, to “advance in life,”—in life itself—not in the trappings of it.

My friends, do you remember that old Scythian custom, when the head of a house died? How he was dressed in his finest dress, and set in his chariot, and carried about to his friends' houses; and each of them placed him at his table's head, and all feasted in his presence? Suppose it were offered to you in plain words, as it *is* offered to you in dire facts, that you should gain this Scythian honour, gradually, while you yet thought yourself alive. Suppose the offer were this: You shall die slowly; your blood shall daily grow cold, your flesh petrify, your heart beat at last only as a rusted group of iron valves. Your life shall fade from you, and sink through the earth into the ice of Caina; but, day by day, your body shall be dressed more gaily, and set in higher chariots, and have more orders on its breast—crowns on its head, if you will. Men shall bow before it, stare and shout round it, crowd after it up and down the streets; build palaces for it, feast with it at their tables' heads all the night long; your soul shall stay enough within it to know what they do, and feel the weight of the golden dress on its shoulders, and the furrow of the crown-edge on the skull;—no more. Would you take the offer, verbally made by the death-angel? Would the meanest among us take it, think you? Yet practically and verily we grasp at it, every one of us, in a measure; many of us grasp at it in its fulness of horror. Every man accepts it, who desires to

advance in life without knowing what life is ; who means only that he is to get more horses, and more footmen, and more fortune, and more public honour, and—*not* more personal soul. He only is advancing in life, whose heart is getting softer, whose blood warmer, whose brain quicker, whose spirit is entering into Living peace. And the men who have this life in them are the true lords or kings of the earth—they, and they only.—*S. and L.*, I., § 39-42.

IV.

ECONOMY.

116. THE ART OF GROWING RICH.—Political economy (the economy of a State, or of citizens) consists simply in the production, preservation, and distribution, at fittest time and place, of useful or pleasurable things. The farmer who cuts his hay at the right time; the shipwright who drives his bolts well home in sound wood; the builder who lays good bricks in well-tempered mortar; the housewife who takes care of her furniture in the parlour, and guards against all waste in her kitchen; and the singer who rightly disciplines, and never overstrains her voice, are all political economists in the true and final sense: adding continually to the riches and well-being of the nation to which they belong.

But mercantile economy, the economy of “merces” or of “pay,” signifies the accumulation, in the hands of individuals, of legal or moral claim upon, or power over, the labour of others; every such claim implying precisely as much poverty or debt on one side, as it implies riches or right on the other.

It does not, therefore, necessarily involve an addition to the actual property, or well-being of the State in which it exists. But since this commercial wealth, or power over labour, is nearly always convertible at once into real property, while real property is not always convertible at once into power over labour, the idea of riches among active men in civilised nations, generally refers to commercial wealth; and in estimating their possessions, they rather calculate the value of their horses and fields by the number of guineas they could get for them, than the value of their guineas by the number of horses and fields they could buy with them.

There is, however, another reason for this habit of mind: namely, that an accumulation of real property is of little use to its owner, unless, together, with it, he has commercial power over labour. Thus, suppose any person to be put in possession of a large estate of fruitful land, with rich beds of gold in its gravel; countless herds of cattle in its pastures; houses, and gardens, and storehouses full of useful stores: but suppose, after all, that he could get no servants? In order that he may be able to have servants, some one in his neighbourhood must be poor, and in want of his gold—or his corn. Assume that no one is in want of either, and that no servants are to be had. He must, therefore, bake his own bread, make his own clothes,

plough his own ground, and shepherd his own flocks. His gold will be as useful to him as any other yellow pebbles on his estate. His stores must rot, for he cannot consume them. He can eat no more than another man could eat, and wear no more than another man could wear. He must lead a life of severe and common labour to procure even ordinary comforts; he will be ultimately unable to keep either houses in repair, or fields in cultivation; and forced to content himself with a poor man's portion of cottage and garden, in the midst of a desert of waste land, trampled by wild cattle, and encumbered by ruins of palaces, which he will hardly mock at himself by calling "his own."

The most covetous of mankind would, with small exultation, I presume, accept riches of this kind on these terms. What is really desired, under the name of riches, is, essentially, power over men; in its simplest sense, the power of obtaining for our own advantage the labour of servant, tradesman, and artist; in wider sense, authority of directing large masses of the nation to various ends (good, trivial, or hurtful, according to the mind of the rich person). And this power of wealth of course is greater or less in direct proportion to the poverty of the men over whom it is exercised, and in inverse proportion to the number of persons who are as rich as ourselves, and who are ready to give the same price for an

article of which the supply is limited. If the musician is poor, he will sing for small pay, as long as there is only one person who can pay him ; but if there be two or three, he will sing for the one who offers him most. And thus the power of the riches of the patron (always imperfect and doubtful, as we shall see presently, even when most authoritative) depends first on the poverty of the artist, and then on the limitation of the number of equally wealthy persons, who also want seats at the concert. So that, as above stated, the art of becoming "rich," in the common sense, is not absolutely nor finally the art of accumulating much money for ourselves, but also of contriving that our neighbours shall have less. In accurate terms, it is "the art of establishing the maximum inequality in our own favour."

Now, the establishment of such inequality cannot be shown in the abstract to be either advantageous or disadvantageous to the body of the nation. The rash and absurd assumption that such inequalities are necessarily advantageous, lies at the root of most of the popular fallacies on the subject of political economy. For the eternal and inevitable law in this matter is, that the beneficialness of the inequality depends, first, on the methods by which it was accomplished : and, secondly, on the purposes to which it is applied. Inequalities of wealth, unjustly established, have assuredly injured the nation in

which they exist during their establishment ; and, unjustly directed, injure it yet more during their existence. But inequalities of wealth, justly established, benefit the nation in the course of their establishment ; and, nobly used, aid it yet more by their existence. That is to say, among every active and well governed people, the various strength of individuals, tested by full exertion and specially applied to various needs, issues in unequal but harmonious results, receiving reward or authority according to its class and service ; while, in the inactive or ill-governed nation, the gradations of decay and the victories of treason work out also their own rugged system of subjection and success ; and substitute, for the melodious inequalities of concurrent power, the iniquitous dominances and depressions of guilt and misfortune.—*U. T. L.*, II.

117. WEALTH.—At the crossing of the transepts of Milan Cathedral has lain, for 300 years, the embalmed body of St. Carlo Borromeo. It holds a golden crosier, and has a cross of emeralds on its breast. Admitting the crosier and emeralds to be useful articles, is the body to be considered as “having” them ? Do they in the politico-economical sense of property, belong to it ? If not, and if we may, therefore, conclude generally that a dead body cannot possess property, what

degree and period of animation in the body will render possession possible ?

As thus : lately in a wreck of a Californian ship, one of the passengers fastened a belt about him with two hundred pounds of gold in it, with which he was found afterwards at the bottom. Now, as he was sinking—had he the gold ? or had the gold him ?

And if, instead of sinking him in the sea by its weight, the gold had struck him on the forehead, and thereby caused incurable disease—suppose palsy or insanity,—would the gold in that case have been more a “possession” than in the first ? Without pressing the inquiry up through instances of gradually increasing vital power over the gold (which I will, however, give, if they are asked for), I presume the reader will see that possession, or “having,” is not an absolute, but a gradated, power ; and consists not only in the quantity or nature of the thing possessed, but also (and in a greater degree) in its suitableness to the person possessing it and in his vital power to use it.

And our definition of Wealth, expanded, becomes : “The possession of useful articles, *which we can use.*” This is a very serious change. For wealth, instead of depending merely on a “have,” is thus seen to depend on a “can.” Gladiator’s death, on a “habet” ; but soldier’s victory, and State’s salvation, on a “quo plurimum posset.” (Liv. VII. 6.) And what we reasoned

of only as accumulation of material, is seen to demand also accumulation of capacity.

So much for our verb. Next for our adjective. What is the meaning of "useful" ?

The inquiry is closely connected with the last. For what is capable of use in the hands of some persons, is capable, in the hands of others, of the opposite of use, called commonly "from-use," or "ab-use." And it depends on the person, much more than on the article, whether its usefulness or ab-usefulness will be the quality developed in it. Thus, wine, which the Greeks, in their Bacchus, made rightly the type of all passion, and which, when used, "cheereth god and man" (that is to say, strengthens both the divine life, or reasoning power, and the earthy, or carnal power, of man); yet, when abused, becomes "Dionusos," hurtful especially to the divine part of man, or reason. And again, the body itself, being equally liable to use and to abuse, and, when rightly disciplined, serviceable to the State, both for war and labour;—but when not disciplined, or abused, valueless to the State, and capable only of continuing the private or single existence of the individual (and that but feebly)—the Greeks called such a body an "idiotic" or "private" body, from their word signifying a person employed in no way directly useful to the State; whence finally, our "idiot," meaning a person entirely occupied with his own concerns.

Hence, it follows that if a thing is to be useful, it must be not only of an availing nature, but in availing hands. Or, in accurate terms, usefulness is value in the hands of the valiant; so that this science of wealth being, as we have just seen, when regarded as the science of Accumulation, accumulative of capacity as well as of material,—when regarded as the Science of Distribution, is distribution not absolute, but discriminate; not of everything to every man, but of the right thing to the right man. A difficult science, dependent on more than arithmetic.—*U. T. L.*, IV.

118. COMMERCE.—Suppose that three men formed a little isolated republic, and found themselves obliged to separate, in order to farm different pieces of land at some distance from each other along the coast: each estate furnishing a distinct kind of produce, and each more or less in need of the material raised on the other. Suppose that the third man, in order to save the time of all three, undertakes simply to superintend the transference of commodities from one farm to the other; on condition of receiving some sufficiently remunerative share of every parcel of goods conveyed, or of some other parcel received in exchange for it.

If this carrier or messenger always brings to each estate, from the other, what is chiefly wanted, at the right time, the operations of the

two farmers will go on prosperously, and the largest possible result in produce, or wealth, will be attained by the little community. But suppose no intercourse between the landowners is possible, except through the travelling agent; and that, after a time, this agent, watching the course of each man's agriculture, keeps back the articles with which he has been entrusted until there comes a period of extreme necessity for them, on one side or other, and then exacts in exchange for them all that the distressed farmer can spare of other kinds of produce: it is easy to see that by ingeniously watching his opportunities, he might possess himself regularly of the greater part of the superfluous produce of the two estates, and at last, in some year of severest trial or scarcity, purchase both for himself and maintain the former proprietors thenceforward as his labourers or servants.

This would be a case of commercial wealth acquired on the exactest principles of modern political economy. But it is manifest in this that the wealth of the State, or of the three men considered as a society, is collectively less than it would have been had the merchant been content with juster profit. The operations of the two agriculturists have been cramped to the utmost; and the continual limitations of the supply of things they wanted at critical times, together with the failure of courage consequent on the prolongation

of a struggle for mere existence, without any sense of permanent gain, must have seriously diminished the effective results of their labour; and the stores finally accumulated in the merchant's hands will not in any wise be of equivalent value to those which, had his dealings been honest, would have filled at once the granaries of the farmers and his own.

The whole question, therefore, respecting not only the advantage, but even the quantity, of national wealth, resolves itself finally into one of abstract justice. It is impossible to conclude, of any given mass of acquired wealth, merely by the fact of its existence, whether it signifies good or evil to the nation in the midst of which it exists. Its real value depends on the moral sign attached to it, just as sternly as that of a mathematical quantity depends on the algebraical sign attached to it. Any given accumulation of commercial wealth may be indicative, on the one hand, of faithful industries, progressive energies, and productive ingenuities: or, on the other, it may be indicative of mortal luxury, merciless tyranny, ruinous chicane. Some treasures are heavy with human tears, as an ill-stored harvest with untimely rain; and some gold is brighter in sunshine than it is in substance.

And these are not, observe, merely moral or pathetic attributes of riches, which the seeker of riches may, if he chooses, despise; they are,

literally and sternly; material attributes of riches, depreciating or exalting, incalculably, the monetary signification of the sum in question. One mass of money is the outcome of action which has created,—another, of action which has annihilated,—ten times as much in the gathering of it; such and such strong hands have been paralysed, as if they had been numbed by nightshade: so many strong men's courage broken, so many productive operations hindered; this and the other false direction given to labour, and lying image of prosperity set up, on Dura plains dug into seven-times-heated furnaces. That which seems to be wealth may in verity be only the gilded index of far-reaching ruin; a wrecker's handful of coin gleaned from the beach to which he has beguiled an argosy; a camp-follower's bundle of rags unwrapped from the breasts of goodly soldiers dead; the purchase-pieces of potter's fields, wherein shall be buried together the citizen and the stranger.

And therefore, the idea that directions can be given for the gaining of wealth, irrespectively of the consideration of its moral sources, or that any general and technical law of purchase and gain can be set down for national practice, is perhaps the most insolently futile of all that ever beguiled men through their vices. So far as I know, there is not in history record of anything so disgraceful to the human intellect as the modern idea that

the commercial text, "Buy in the cheapest market and sell in the dearest," represents, or under any circumstances could represent, an available principle of national economy. Buy in the cheapest market?—yes; but what made your market cheap? Charcoal may be cheap among your roof timbers after a fire, and bricks may be cheap in your streets after an earthquake; but fire and earthquake may not therefore be national benefits. Sell in the dearest?—yes, truly; but what made your market dear? You sold your bread well to-day: was it to a dying man who gave his last coin for it, and will never need bread more; or to a rich man who to-morrow will buy your farm over your head; or to a soldier on his way to pillage the bank in which you have put your fortune?

None of these things you can know. One thing only you can know: namely, whether this dealing of yours is a just and faithful one, which is all you need concern yourself about respecting it; sure thus to have done your own part in bringing about ultimately in the world a state of things which will not issue in pillage or in death.—*U. T. L.*, II.

119. MONEY has been inaccurately spoken of as merely a means of exchange. But it is far more than this. It is a documentary expression of legal claim. It is not wealth, but a documentary claim

to wealth, being the sign of the relative quantities of it, or of the labour producing it, to which, at a given time, persons, or societies, are entitled.

If all the money in the world, notes and gold, were destroyed in an instant, it would leave the world neither richer nor poorer than it was. But it would leave the individual inhabitants of it in different relations.

Money is, therefore, correspondent in its nature to the title-deed of an estate. Though the deed be burned, the estate still exists, but the right to it has become disputable.—*Munera Pulveris*, I., § 21.

120. THE GAME OF MONEY-MAKING.—The first of all English games is making money. That is an all-absorbing game ; and we knock each other down oftener in playing at that, than at football, or any other roughest sport : and it is absolutely without purpose ; no one who engages heartily in that game ever knows why. Ask a great money-maker what he wants to do with his money,—he never knows. He doesn't make it to do anything with it. He gets it only that he *may* get it. "What will you make of what you have got?" you ask. "Well, I'll get more," he says. Just as, at cricket, you get more runs. There's no use in the runs, but to get more of them than other people is the game. And there's no use in the money, but to have more of it than other

people is the game. So all that great foul city of London there,—rattling, growling, smoking, stinking,—a ghastly heap of fermenting brick-work, pouring out poison at every pore,—you fancy it is a city of work? Not a street of it! It is a great city of play; very nasty play, and very hard play, but still play. It is only Lord's cricket-ground without the turf:—a huge billiard-table without the cloth, and with pockets as deep as the bottomless pit; but mainly a billiard-table, after all.—*C. IV. O., I., § 24.*

121. RICH AND POOR.—In a community regulated only by laws of demand and supply, but protected from open violence, the persons who become rich are, generally speaking, industrious, resolute, proud, covetous, prompt, methodical, sensible, unimaginative, insensitive, and ignorant. The persons who remain poor are the entirely foolish, the entirely wise, the idle, the reckless, the humble, the thoughtful, the dull, the imaginative, the sensitive, the well-informed, the improvident, the irregularly and impulsively wicked, the clumsy knave, the open thief, and the entirely merciful, just, and godly person.—*U. T. L., IV.*

122. THE BUSINESS-MAN AS HERO.—Philosophically, it does not, at first sight, appear reasonable (many writers have endeavoured to prove it unreasonable), that a peaceable and

rational person, whose trade is buying and selling, should be held in less honour than an unpeaceable and often irrational person, whose trade is slaying. Nevertheless, the consent of mankind has always, in spite of the philosophers, given precedence to the soldier.

And this is right.

For the soldier's trade, verily and essentially, is not slaying, but being slain. This, without well knowing its own meaning, the world honours it for. A bravo's trade is slaying; but the world has never respected bravos more than merchants: the reason it honours the soldier is, because he holds his life at the service of the State. Reckless he may be—fond of pleasure or of adventure—all kinds of bye-motives and mean impulses may have determined the choice of his profession, and may affect (to all appearance exclusively) his daily conduct in it; but our estimate of him is based on this ultimate fact—of which we are well assured—that put him in a fortress breach, with all the pleasures of the world behind him, and only death and his duty in front of him, he will keep his face to the front; and he knows that his choice may be put to him at any moment—and has beforehand taken his part—virtually takes such part continually—does, in reality, die daily.

Not less is the respect we pay to the lawyer and physician, founded ultimately on their self-sacrifice. Whatever the learning or acuteness of

a great lawyer, our chief respect for him depends on our belief that, set in a judge's seat, he will strive to judge justly, come of it what may. Could we suppose that he would take bribes, and use his acuteness and legal knowledge to give plausibility to iniquitous decisions, no degree of intellect would win for him our respect. Nothing will win it, short of our tacit conviction, that in all important acts of his life justice is first with him; his own interest, second.

In the case of a physician, the ground of the honour we render him is clearer still. Whatever his science, we would shrink from him in horror if we found him regard his patients merely as subjects to experiment upon; much more, if we found that, receiving bribes from persons interested in their deaths, he was using his best skill to give poison in the mask of medicine.

Finally, the principle holds with utmost clearness as it respects clergymen. No goodness of disposition will excuse want of science in a physician, or of shrewdness in an advocate; but a clergyman, even though his power of intellect be small, is respected on the presumed ground of his unselfishness and serviceableness.

Now, there can be no question but that the tact, foresight, decision, and other mental powers, required for the successful management of a large mercantile concern, if not such as could be compared with those of a great lawyer, general, or

divine, would at least match the general conditions of mind required in the subordinate officers of a ship, or of a regiment, or in the curate of a country parish. If, therefore, all the efficient members of the so-called liberal professions are still, somehow, in public estimate of honour, preferred before the head of a commercial firm, the reason must lie deeper than in the measurement of their several powers of mind.

And the essential reason for such preference will be found to lie in the fact that the merchant is presumed to act always selfishly. His work may be very necessary to the community; but motive of it is understood to be wholly personal. The merchant's first object in all his dealings must be (the public believe) to get as much for himself, and leave as little to his neighbour (or customer) as possible. Enforcing this upon him, by political statute, as the necessary principle of his action; recommending it to him on all occasions, and themselves reciprocally adopting it, proclaiming vociferously, for law of the universe, that a buyer's function is to cheapen, and a seller's to cheat,—the public, nevertheless, involuntarily condemn the man of commerce for his compliance with their own statement, and stamp him for ever as belonging to an inferior grade of human personality.

This they will find, eventually, they must give up doing. They must not cease to condemn

selfishness; but they will have to discover a kind of commerce which is not exclusively selfish. Or, rather, they will have to discover that there never was, or can be, any other kind of commerce; that this which they have called commerce was not commerce at all, but cozening; and that a true merchant differs as much from a merchant according to laws of modern political economy, as the hero of the "Excursion" from Autolycus. They will find that commerce is an occupation which gentlemen will every day see more need to engage in, rather than in the businesses of talking to men, or slaying them; that, in true commerce, as in true preaching, or true fighting, it is necessary to admit the idea of occasional voluntary loss;—that sixpences have to be lost, as well as lives, under a sense of duty; that the market may have its martyrdoms as well as the pulpit; and trade its heroisms as well as war.

May have—in the final issue, must have—and only has not had yet, because men of heroic temper have always been misguided in their youth into other fields; not recognising what is in our days, perhaps, the most important of all fields; so that, while many a zealous person loses his life in trying to teach the form of a gospel, very few will lose a hundred pounds in showing the practice of one.

The fact is, that people never have had clearly explained to them the true functions of a merchant

with respect to other people. I should like the reader to be very clear about this.

Five great intellectual professions, relating to daily necessities of life, have hitherto existed—three exist necessarily, in every civilised nation:

The Soldier's profession is to *defend* it.

The Pastor's to *teach* it.

The Physician's to *keep it in health*.

The Lawyer's to *enforce justice* in it.

The Merchant's to *provide* for it.

And the duty of all these men is, on due occasion, to *die* for it.

“On due occasion,” namely:—

The Soldier, rather than leave his post in battle.

The Physician, rather than leave his post in plague.

The Pastor, rather than teach Falsehood.

The Lawyer, rather than countenance Injustice.

The Merchant—what is *his* “due occasion” of death?

It is the main question for the merchant, as for all of us. For, truly, the man who does not know when to die, does not know how to live.

Observe, the merchant's function (or manufacturer's, for in the broad sense in which it is here used the word must be understood to include both) is to provide for the nation. It is no more his function to get profit for himself out of that provision than it is a clergyman's function to get his stipend. This stipend is a due and necessary

IV. ECONOMY.

adjunct, but not the object of his life, if he true clergyman, any more than his fee (or his salary) is the object of life to a true physician. Neither is his fee the object of life to a true merchant. All three, if true men, have a work to be done irrespective of fee—to be done even at any cost, or for quite the contrary of fee; the pastor's function being to teach, the physician's to heal, and the merchant's, as I have said, to provide. That is to say, he has to understand to their very root the qualities of the thing he deals in, and the means of obtaining or producing it; and he has to apply all his sagacity and energy to the producing or obtaining it in perfect state, and distributing it at the cheapest possible price where it is most needed.

And because the production or obtaining of any commodity involves necessarily the agency of many lives and hands, the merchant becomes in the course of his business the master and governor of large masses of men in a more direct, though less confessed way, than a military officer or pastor; so that on him falls, in great part, the responsibility for the kind of life they lead: and it becomes his duty, not only to be always considering how to produce what he sells, in the purest and cheapest forms, but how to make the various employments involved in the production, or transference of it, most beneficial to the men employed.

And as into these two functions, requiring for

right exercise the highest intelligence, as
 as patience, kindness, and tact, the merchant
 bound to put all his energy, so for their just
 discharge he is bound, as soldier or physician
 is bound, to give up, if need be, his life, in such
 way as it may be demanded of him. Two main
 points he has in his providing function to main-
 tain: first, his engagements (faithfulness to en-
 gagements being the real root of all possibilities,
 in commerce); and, secondly, the perfectness and
 purity of the thing provided; so that, rather than
 fail in any engagement, or consent to any deterio-
 ration, adulteration, or unjust and exorbitant price
 of that which he provides, he is bound to meet
 fearlessly any form of distress, poverty, or labour,
 which may, through maintenance of these points,
 come upon him.

Again: in his office as governor of the men
 employed by him, the merchant or manufacturer
 is invested with a distinctly paternal authority
 and responsibility. In most cases, a youth en-
 tering a commercial establishment is withdrawn
 altogether from home influence; his master must
 become his father, else he has, for practical and
 constant help, no father at hand: in all cases the
 master's authority, together with the general tone
 and atmosphere of his business, and the character
 of the men with whom the youth is compelled in
 the course of it to associate, have more immediate
 and pressing weight than the home influence, and

will usually neutralise it either for good or evil ; so that the only means which the master has of doing justice to the men employed by him is to ask himself sternly whether he is dealing with such subordinate as he would with his own son, if compelled by circumstances to take such a position.

Supposing the captain of a frigate saw it right, or were by any chance obliged, to place his own son in the position of a common sailor : as he would then treat his son, he is bound always to treat every one of the men under him. So, also, supposing the master of a manufactory saw it right, or were by any chance obliged, to place his own son in the position of an ordinary workman ; as he would then treat his son, he is bound always to treat every one of his men. This is the only effective, true, or practical RULE which can be given on this point of political economy.

And as the captain of a ship is bound to be the last man to leave his ship in case of wreck, and to share his last crust with the sailors in case of famine, so the manufacturer, in any commercial crisis or distress, is bound to take the suffering of it with his men, and even to take more of it for himself than he allows his men to feel ; as a father would in a famine, shipwreck, or battle, sacrifice himself for his son.—*U. T. L.*, I.

123. THE BUSINESS-MAN AS SAINT (A PICTURE BY CARPACCIO).—The calling of Matthew ;

visible, this, in a bright day, and worth waiting for one, to see it in, through any stress of weather.

For indeed, the Gospel which the publican wrote for us, with its perfect Sermon on the Mount, and mostly more harmonious and gentleness, in places where St. Luke is formal, St. John mysterious, and St. Mark brief,—this Gospel, according to St. Matthew, I should think, if we had to choose one out of all the books in the Bible for a prison or desert friend, would be the one we should keep.

And we do not enough think how much that leaving the receipt of custom meant, as a sign of the man's nature, who was to leave us such a notable piece of literature.

Yet observe, Carpaccio does not mean to express the fact, or anything like the fact, of the literal calling of Matthew. What the actual character of the publicans of Jerusalem was at that time, in its general aspect, its admitted degradation, and yet power of believing, with the harlot, what the masters and the mothers in Israel could not believe, it is not his purpose to teach you. This call from receipt of custom, he takes for the symbol of the universal call to leave all that we have, and are doing. "Whosoever forsaketh not all that he hath, cannot be my disciple." For the other calls were easily obeyed in comparison of this. To leave one's often

empty nets and nightly toil on sea, and become fishers of men, perhaps you might find pescatori enough on the Riva there, within a hundred paces of you, who would take the chance at once, if any gentle person offered it them. James and Jude—Christ's cousins—no thanks to them for following Him; their own home conceivably no richer than His. Thomas and Philip, I suppose, somewhat thoughtful persons on spiritual matters, questioning of them long since; going out to hear St. John, and to see whom he had seen. But *this* man, busy in the place of business—engaged in the interests of foreign governments—thinking no more of an Israelite Messiah than Mr. Goschen, but only of Egyptian finance, and the like—suddenly the Messiah, passing by, says, "Follow me!" and he rises up, gives Him his hand, "Yea! to the death;" and absconds from his desk in that electric manner on the instant, leaving his cash-box unlocked, and his books for whoso list to balance!—a very remarkable kind of person indeed, it seems to me.

Carpaccio takes him, as I said, for a type of such sacrifice at its best. Everything (observe in passing) is here given you of the best. Dragon deadliest—knight purest—parrot scarletest—basilisk absurdest—publican publicanest; a perfect type of the life spent in taxing one's neighbour, exacting duties, percentages, profits in general, in a due and virtuous manner.

For do not think Christ would have called a bad or corrupt publican—much less that a bad or corrupt publican would have obeyed the call. Your modern English evangelical doctrine that Christ has a special liking for the souls of rascals is the absurdest basilisk of a doctrine that ever pranced on judgment steps. That which is *lost* He comes to save,—yes; but not that which is defiantly going the way He has forbidden. He showed you plainly enough what kind of publican He would call, having chosen two, both of the best. “Behold, Lord, if I have taken anything from any man, I restore it fourfold!”—a beautiful manner of trade. Carpaccio knows well that there were no defalcations from Levi’s chest—no oppressions in his tax-gathering. This whom he has painted is a true merchant of Venice, uprightest and gentlest of the merchant race; yet with a glorious pride in him. What merchant but one of Venice would have ventured to take Christ’s hand, as his friend’s—as one man takes another’s? Not repentant, he, of anything he has done; not crushed or terrified by Christ’s call; but rejoicing in it, as meaning Christ’s praise and love, “Come up higher then, for there are nobler treasures than these to count, and a nobler King than this to render account to. Thou hast been faithful over a few things; enter thou into the joy of Thy Lord.”

A lovely picture, in every sense and power of

painting; natural, and graceful, and quiet, and pathetic;—divinely religious, yet as decorative and dainty as a bank of violets in spring.—*St. Mark's Rest*, 1st Supplement.

124. JUDAS AND CO.—We do great injustice to Iscariot, in thinking him wicked above all common wickedness. He was only a common money-lover, and, like all money-lovers, did not understand Christ;—could not make out the worth of Him, or meaning of Him. He never thought He would be killed. He was horror-struck when he found that Christ would be killed; threw his money away instantly, and hanged himself. How many of our present money-seekers, think you, would have the grace to hang themselves, whoever was killed? But Judas was a common, selfish, muddle-headed, pilfering fellow; his hand always in the bag of the poor, not caring for them. Helpless to understand Christ, he yet believed in Him, much more than most of us do; had seen Him do miracles, thought He was quite strong enough to shift for Himself, and he, Judas, might as well make his own little bye-perquisites out of the affair. Christ would come out of it well enough, and he have his thirty pieces. Now, that is the money-seeker's idea, all over the world. He doesn't hate Christ, but can't understand Him—doesn't care for Him—sees no good in that benevolent business; makes his own little job out of

it at all events, come what will. And thus, out of every mass of men, you have a certain number of bagmen—your “fee-first” men, whose main object is to make money. And they do make it—make it in all sorts of unfair ways, chiefly by the weight and force of money itself, or what is called the power of capital; that is to say, the power which money, once obtained, has over the labour of the poor, so that the capitalist can take all its produce to himself, except the labourer’s food. That is the modern Judas’s way of “carrying the bag,” and “bearing what is put therein.”—*C. W. O.*, I., § 33.

125. USURY.—The orders, “not to lay up treasures for ourselves on earth,” and to “sell that we have, and give alms,” and to “provide ourselves bags which wax not old,” are perfectly direct, unmistakable,—universal, and while we are not at all likely to be blamed by God for not imitating Him as a Judge, we shall assuredly be condemned by Him for not, under Judgment, doing as we were bid. But even if we do not feel able to obey these orders, if we must and will lay up treasures on earth, and provide ourselves bags with holes in them,—God may perhaps still, with scorn, permit us in our weakness, provided we are content with our earthly treasures, when we have got them, and don’t oppress our brethren, and grind down their souls with them. We may have

our old bag about our neck, if we will, and go to heaven like beggars ;—but if we sell our brother also, and put the price of his life in the bag, we need not think to enter the kingdom of God so loaded. A rich man may, though hardly, enter the kingdom of heaven without repenting him of his riches ; but not the thief, without repenting his theft ; nor the adulterer, without repenting his adultery ; nor the usurer, without repenting his usury.

The nature of which last sin, let us now clearly understand, once for all.

Usury is properly the taking of money for the loan or use of anything, (over and above what pays for wear and tear,) such use involving no care or labour on the part of the lender. It includes all investments of capital whatsoever, returning “dividends,” as distinguished from labour wages, or profits. Thus anybody who works on a railroad as platelayer, or stoker, has a right to wages for his work ; and any inspector of wheels or rails has a right to payment for such inspection ; but idle persons who have only paid a hundred pounds towards the road-making, have a right to the return of the hundred pounds,—and no more. If they take a farthing more, they are usurers. They may take fifty pounds for two years, twenty-five for four, five for twenty, or one for a hundred. But the first farthing they take more than their hundred, be it sooner or later, is usury.

Again, when we build a house, and let it, we have a right to as much rent as will return us the wages of our labour, and the sum of our outlay. If, as in ordinary cases, not labouring with our hands or head, we have simply paid—say £1000—to get the house built, we have a right to the £1000 back again at once, if we sell it; or, if we let it, to £500 rent during two years, or £100 rent during ten years, or £10 rent during a hundred years. But if, sooner or later, we take a pound more than the thousand, we are usurers.

And thus in all other possible or conceivable cases, the moment our capital is “increased,” by having lent it, be it but in the estimation of a hair, that hair’s-breadth of increase is usury, just as much as the stealing a farthing is theft, no less than stealing a million.

But usury is worse than theft, in so far as it is obtained either by deceiving people, or distressing them; generally by both; and finally by deceiving the usurer himself, who comes to think that usury is a real increase, and that money can grow out of money; whereas all usury is increase to one person only by decrease to another; and every gain of calculated Increment to the Rich, is balanced by its mathematical equivalent of Decrement to the Poor. The Rich have hitherto only counted their gain; but the day is coming, when the Poor will also count their loss,—with political results hitherto unparalleled. . . .

Any honest and sensible reader, if he chooses, can think out the truth in such matters for himself. If he be dishonest, or foolish, no one can teach him. If he is resolved to find reason or excuse for things as they are, he may find refuge in one lie after another ; and dislodged from each in turn, fly from the last back to the one he began with. But there will not long be need for debate—nor time for it. Not all the lying lips of commercial Europe can much longer deceive the people in their rapidly increasing distress, nor arrest their straight battle with the cause of it. Through what confused noise and garments rolled in blood,—through what burning and fuel of fire, they will work out their victory,—God only knows, nor what they will do to Barabbas, when they have found out that he *is* a Robber, and not a King. But that discovery of his character and capacity draws very near : and no less change in the world's ways than the former fall of Feudalism itself.

In the meantime, for those of us who are Christians, our own way is plain. We can with perfect ease ascertain what usury is, and in what express terms forbidden.

“And if thy brother be poor, and powerless with his hands, at thy side, thou shalt take his part upon thee, to help him, as thy proselyte and thy neighbour ; and thy brother shall live with thee. Thou shalt take no usury of him, nor

anything over and above, and thou shalt fear thy God. I am the Lord, and thy brother shall live with thee. Thou shalt not give him thy money, for usury; and thou shalt not give him thy food for increase." *

There is the simple law for all of us;—one of those which Christ assuredly came not to destroy, but to fulfil: and there is no national prosperity to be had but in obedience to it.

How we usurers are to live, with the hope of our gains gone, is precisely the old temple of Diana question. How Robin Hood and Cœur de Lion were to live without arrow or axe, would have been as strange a question to *them*, in their day. And there are many amiable persons who will not directly see their way, any more than I do myself, to an honest life; only, let us be sure that this we are leading now is a dishonest one.—*F. C.*, Letter 68.

126. THE SINEWS OF WAR.—It is one very awful form of the operation of wealth in Europe that it is entirely capitalists' wealth which supports unjust wars. Just wars do not need so much money to support them; for most of the men who wage such, wage them gratis; but for an unjust war, men's bodies and souls have both to be bought; and the best tools of war for them besides; which makes such war costly to the

* Leviticus xxv. 35-37, from the Septuagint.

maximum ; not to speak of the cost of base fear, and angry suspicion, between nations which have not grace nor honesty enough in all their multitudes to buy an hour's peace of mind with : as, at present, France and England, purchasing of each other ten millions sterling worth of consternation annually, (a remarkably light crop, half thorns and half aspen leaves,—sown, reaped, and granaried by the “science” of the modern political economist, teaching covetousness instead of truth). And all unjust war being supportable, if not by pillage of the enemy, only by loans from capitalists, these loans are repaid by subsequent taxation of the people, who appear to have no will in the matter, the capitalists' will being the primary root of the war ; but its real root is the covetousness of the whole nation, rendering it incapable of faith, frankness, or justice, and bringing about, therefore, in due time, his own separate loss and punishment to each person.—*U. T. L.*, IV., *note*.

127. THE POWER OF CAPITAL.—There is also a confused notion in the minds of many persons, that the gathering of the property of the poor into the hands of the rich does no ultimate harm ; since, in whosoever hands it may be, it must be spent at last ; and thus, they think, return to the poor again. This fallacy has been again and again exposed ; but granting the plea true, the same apology may, of course, be made for black

mail, or any other form of robbery. It might be (though practically it never is) as advantageous for the nation that the robber should have the spending of the money he extorts, as that the person robbed should have spent it. But this is no excuse for the theft. If I were to put a turnpike on the road where it passes my own gate, and endeavour to exact a shilling from every passenger, the public would soon do away with my gate, without listening to any plea on my part that "it was as advantageous to them, in the end, that I should spend their shillings, as that they themselves should." But if, instead of out-facing them with a turnpike, I can only persuade them to come in and buy stones, or old iron, or any such useless thing, out of my ground, I may rob them to the same extent, and be, moreover, thanked as a public benefactor, and promoter of commercial prosperity. And this main question for the poor of England—for the poor of all countries—is wholly omitted in every common treatise on the subject of wealth. Even by the labourers themselves, the operation of capital is regarded only in its effect on their immediate interests; never in the far more terrific power of its appointment of the kind and the object of labour. It matters little, ultimately, how much a labourer is paid for making anything; but it matters fearfully what the thing is, which he is compelled to make. If his labour is so ordered as to

produce food, and fresh air, and fresh water, no matter that his wages are low;—the food and fresh air and water will be at last there; and he will at last get them. But if he is paid to *destroy* food and fresh air, or to produce iron bars instead of them,—the food and air will finally *not* be there, and he will *not* get them, to his great and final inconvenience.—*C. W. O.*, Introd., § 7.

128. SUPPLY AND DEMAND.—The popular economist thinks himself wise in having discovered that wealth, or the forms of property in general, must go where they are required; that where demand is, supply must follow. He farther declares that this course of demand and supply cannot be forbidden by human laws. Precisely in the same sense, and with the same certainty, the waters of the world go where they are required. Where the land falls, the water flows. The course neither of clouds nor rivers can be forbidden by human will. But the disposition and administration of them can be altered by human forethought. Whether the stream shall be a curse or a blessing, depends upon man's labour, and administrating intelligence. For centuries after centuries, great districts of the world, rich in soil, and favoured in climate, have lain desert under the rage of their own rivers; nor only desert, but plague-struck. The stream which, rightly directed, would have flowed in

soft irrigation from field to field—would have purified the air, given food to man and beast, and carried their burdens for them on its bosom—now overwhelms the plain and poisons the wind; its breath pestilence, and its work famine. In like manner this wealth “goes where it is required.” No human laws can withstand its flow. They can only guide it: but this, the leading trench and limiting mound can do so thoroughly, that it shall become water of life—the riches of the hand of wisdom; or, on the contrary, by leaving it to its own lawless flow, they may make it, what it has been too often, the last and deadliest of national plagues: water of Marah—the water which feeds the roots of all evil.—*U. T. L.*, III.

129. STEWARDSHIP.—A man's power over his property is, at the widest range of it, fivefold; it is power of Use, for himself, Administration, to others, Ostentation, Destruction, or Bequest; and possession is in use only, which for each man is sternly limited; so that such things, and so much of them as he can use, are, indeed, well for him, or Wealth; and more of them, or any other things, are ill for him, or Illth. Plunged to the lips in Orinoco, he shall drink to his thirst measure; more at his peril: with a thousand oxen on his lands, he shall eat to his hunger measure; more, at his peril. He cannot live in

two houses at once; a few bales of silk or wool will suffice for the fabric of all the clothes he can ever wear, and a few books will probably hold all the furniture good for his brain. Beyond these, in the best of us but narrow, capacities, we have but the power of administering, or *mal-administering*, wealth: (that is to say, distributing, lending, or increasing it);—of exhibiting it (as in magnificence of retinue or furniture),—of destroying, or, finally, of bequeathing it. And with multitudes of rich men, administration degenerates into curatorship; they merely hold their property in charge, as Trustees, for the benefit of some person or persons to whom it is to be delivered upon their death; and the position, explained in clear terms, would hardly seem a covetable one. What would be the probable feelings of a youth, on his entrance into life, to whom the career hoped for him was proposed in terms such as these: “You must work unremittingly, and with your utmost intelligence, during all your available years: you will thus accumulate wealth to a large amount; but you must touch none of it, beyond what is needful for your support. Whatever sums you gain, beyond those required for your decent and moderate maintenance, and whatever beautiful things you may obtain possession of, shall be properly taken care of by servants, for whose maintenance you will be charged, and whom you will have the

trouble of superintending, and on your death-bed you shall have the power of determining to whom the accumulated property shall belong, or to what purposes be applied" ?

The labour of life, under such conditions, would probably be neither zealous nor cheerful ; yet the only difference between this position and that of the ordinary capitalist is the power which the latter supposes himself to possess, and which is attributed to him by others, of spending his money at any moment. This pleasure, taken *in the imagination of power to part with that with which we have no intention of parting*, is one of the most curious, though commonest forms of the Eidolon, or Phantasm of Wealth. But the political economist has nothing to do with this idealism, and looks only to the practical issue of it—namely, that the holder of wealth, in such temper, may be regarded simply as a mechanical means of collection ; or as a money-chest with a slit in it, not only receptant but suctional, set in the public thoroughfare ;—chest of which only Death has the key, and evil Chance the distribution of the contents. In his function of Lender (which, however, is one of administration, not use, as far as he is himself concerned), the capitalist takes, indeed, a more interesting aspect ; but even in that function, his relations with the State are apt to degenerate into a mechanism for the convenient contraction of debt ;—a function the more

mischievous, because a nation invariably appeases its conscience with respect to an unjustifiable expense, by meeting it with borrowed funds, expresses its repentance of a foolish piece of business, by letting its tradesmen wait for their money, and always leaves its descendants to pay for the work which will be of the least advantage to them.—*Munera Pulveris*, II., § 37, 38.

130. LUXURY.—It is popularly supposed that it benefits a nation to invent a want. But the fact is, that the true benefit is in extinguishing a want—in living with as few wants as possible.

This ought to be the first lesson of every rich man's political code. "Sir," his tutor should early say to him, "you are so placed in society,—it may be for your misfortune, it *must* be for your trial—that you are likely to be maintained all your life by the labour of other men. You will have to make shoes for nobody, but some one will have to make a great many for you. You will have to dig ground for nobody, but some one will have to dig through every summer's hot day for you. You will build houses and make clothes for no one, but many a rough hand must knead clay, and many an elbow be crooked to the stitch, to keep that body of yours warm and fine. Now remember, whatever you and your work may be worth, the less your keep costs, the better. It does not cost money only. It costs degradation.

You do not merely employ these people. You also tread upon them. It cannot be helped ;—you have your place, and they have theirs ; but see that you tread as lightly as possible, and on as few as possible. What food, and clothes, and lodging, you honestly need, for your health and peace, you may righteously take. See that you take the plainest you can serve yourself with—that you waste or wear nothing vainly—and that you employ no man in furnishing you with any useless luxury.” . . .

Yet observe, though it is out of its proper place said here, this law forbids no luxury which men are not degraded in providing. You may have Paul Veronese to paint your ceiling, if you like, or Benvenuto Cellini to make cups for you. But you must not employ a hundred divers to find beads to stitch over your sleeve.

And the degree in which you recognise the difference between these two kinds of services, is precisely what makes the difference between your being a civilised person or a barbarian. If you keep slaves to furnish forth your dress—to glut your stomach—sustain your indolence—or deck your pride, you are a barbarian. If you keep servants, properly cared for, to furnish you with what you verily want, and no more than that—you are a “civil” person—a person capable of the qualities of citizenship.—*T. and T.*, XXI., § 128–131.

131. MASTER AND SERVANT.—We will suppose that the master of a household desires only to get as much work out of his servants as he can, at the rate of wages he gives. He never allows them to be idle ; feeds them as poorly and lodges them as ill as they will endure, and in all things pushes his requirements to the exact point beyond which he cannot go without forcing the servant to leave him. In doing this, there is no violation on his part of what is commonly called “justice.” He agrees with the domestic for his whole time and service, and takes them ;—the limits of hardship in treatment being fixed by the practice of other masters in his neighbourhood ; that is to say, by the current rate of wages for domestic labour. If the servant can get a better place, he is free to take one, and the master can only tell what is the real market value of his labour, by requiring as much as he will give.

This is the politico-economical view of the case, according to the doctors of that science ; who assert that by this procedure the greatest average of work will be obtained from the servant, and therefore the greatest benefit to the community, and through the community, by reversion, to the servant himself.

That, however, is not so. It would be so if the servant were an engine of which the motive power was steam, magnetism, gravitation, or any other agent of calculable force. But he being, on the

contrary, an engine whose motive power is a Soul, the force of this very peculiar agent, as an unknown quantity, enters into all the political economist's equations, without his knowledge, and falsifies every one of their results. The largest quantity of work will not be done by this curious engine for pay, or under pressure, or by help of any kind of fuel which may be supplied by the chaldron. It will be done only when the motive force, that is to say, the will or spirit of the creature, is brought to its greatest strength by its own proper fuel: namely, by the affections.

It may indeed happen, and does happen often, that if the master is a man of sense and energy, a large quantity of material work may be done under mechanical pressure, enforced by strong will and guided by wise method; also it may happen, and does happen often, that if the master is indolent and weak (however good natured), a very small quantity of work, and that bad, may be produced by the servant's undirected strength, and contemptuous gratitude. But the universal law of the matter is that, assuming any given quantity of energy and sense in master and servant, the greatest material result obtainable by them will be, not through antagonism to each other, but through affection for each other; and that, if the master, instead of endeavouring to get as much work as possible from the servant, seeks rather to render his appointed and necessary work beneficial to him,

and to forward his interests in all just and wholesome ways, the real amount of work ultimately done, or of good rendered, by the person so cared for, will indeed be the greatest possible.

Observe, I say, "of good rendered," for a servant's work is not necessarily or always the best thing he can give his master. But good of all kinds, whether in material service, in protective watchfulness of his master's interest and credit, or in joyful readiness to seize unexpected and irregular occasions of help.

Nor is this one whit less generally true because indulgence will be frequently abused, and kindness met with ingratitude. For the servant who, gently treated, is ungrateful, treated ungenerally, will be revengeful; and the man who is dishonest to a liberal master will be injurious to an unjust one.

In any case, and with any person, this unselfish treatment will produce the most effective return. Observe, I am here considering the affections wholly as a motive power; not at all as things in themselves desirable or noble, or in any other way abstractedly good. I look at them simply as an anomalous force, rendering every one of the ordinary political economist's calculations nugatory; while, even if he desired to introduce this new element into his estimates, he has no power of dealing with it; for the affections only become a true motive power when they ignore every other motive and condition of political

economy. Treat the servant kindly, with the idea of turning his gratitude to account, and you will get, as you deserve, no gratitude, nor any value for your kindness; but treat him kindly without any economical purpose, and all economical purposes will be answered; in this, as in all other matters, whosoever will save his life shall lose it, whoso loses it shall find it.—*U. T. L., I.*

132. HEAD-WORK AND HAND-WORK.—There *must* be work done by the arms, or none of us could live. There *must* be work done by the brains, or the life we get would not be worth having. And the same men cannot do both. There is rough work to be done, and rough men must do it; there is gentle work to be done, and gentlemen must do it; and it is physically impossible that one class should do, or divide, the work of the other. And it is of no use to try to conceal this sorrowful fact by fine words, and to talk to the workman about the honourableness of manual labour and the dignity of humanity. Rough work, honourable or not, takes the life out of us; and the man who has been heaving clay out of a ditch all day, or driving an express train against the north wind all night, or holding a collier's helm in a gale on a lee shore, or whirling white-hot iron at a furnace mouth, is not the same man at the end of his day, or night, as one who has been sitting in a quiet room, with everything

comfortable about him, reading books, or classing butterflies, or painting pictures. If it is any comfort to you to be told that the rough work is the more honourable of the two, I should be sorry to take that much of consolation from you; and in some sense I need not. The rough work is at all events real, honest, and, generally, though not always, useful; while the fine work is, a great deal of it, foolish and false, as well as fine, and therefore dishonourable; but when both kinds are equally well and worthily done the head's is the noble work, and the hand's the ignoble.—*C. W. O.*, I., § 36.

133. THE VALUE OF LABOUR.—Labour is the contest of the life of man with an opposite;—the term “life” including his intellect, soul, and physical power, contending with question, difficulty, trial, or material force.

Labour is of a higher or lower order, as it includes more or fewer of the elements of life: and labour of good quality, in any kind, includes always as much intellect and feeling as will fully and harmoniously regulate the physical force.

In speaking of the value and price of labour, it is necessary always to understand labour of a given rank and quality, as we should speak of gold or silver of a given standard. Bad (that is, heartless, inexperienced, or senseless) labour cannot be

valued; it is like gold of uncertain alloy, or flawed iron.

The quality and kind of labour being given, its value, like that of all other valuable things, is invariable. But the quantity of it which must be given for other things is variable: and in estimating this variation, the price of other things must always be counted by the quantity of labour; not the price of labour by the quantity of other things.

Thus, if we want to plant an apple sapling in rocky ground, it may take two hours' work; in soft ground, perhaps only half an hour. Grant the soil equally good for the tree in each case. Then the value of the sapling planted by two hours' work is nowise greater than that of the sapling planted in half an hour. One will bear no more fruit than the other. Also, one half-hour of work is as valuable as another half-hour; nevertheless, the one sapling has cost four such pieces of work, the other only one. Now, the proper statement of this fact is, not that the labour on the hard ground is cheaper than on the soft; but that the tree is dearer. The exchange value may, or may not, afterwards depend on this fact. If other people have plenty of soft ground to plant in, they will take no cognisance of our two hours' labour in the price they will offer for the plant on the rock. And if, through want of sufficient botanical science, we have planted an upas-tree

instead of an apple, the exchange value will be a negative quantity; still less proportionate to the labour expended.

What is commonly called cheapness of labour, signifies, therefore, in reality, that many obstacles have to be overcome by it; so that much labour is required to produce a small result. But this should never be spoken of as cheapness of labour, but as dearness of the object wrought for. It would be just as rational to say that walking was cheap, because we had ten miles to walk home to our dinner, as that labour was cheap, because we had to work ten hours to earn it.—*Unto This Last*, IV.

134. COMPETITION IN THE LABOUR MARKET. —If it were thought that the labour necessary to make a good physician would be gone through by a sufficient number of students with the prospect of only half-guinea fees, public consent would soon withdraw the unnecessary half-guinea. In this ultimate sense, the price of labour is indeed always regulated by the demand for it; but, so far as the practical and immediate administration of the matter is regarded, the best labour always has been, and is, as *all* labour ought to be, paid by an invariable standard.

“What!” the reader perhaps answers amazedly: “pay good and bad workmen alike?”

Certainly. The difference between one prelate’s

sermons and his successor's—or between one physician's opinion and another's,—is far greater, as respects the qualities of mind involved, and far more important in result to you personally, than the difference between good and bad laying of bricks (though that is greater than most people suppose). Yet you pay with equal fee, contentedly, the good and bad workmen upon your soul, and the good and bad workmen upon your body; much more may you pay, contentedly, with equal fees, the good and bad workmen upon your house.

“Nay, but I choose my physician, and (?) my clergyman, thus indicating my sense of the quality of their work.” By all means, also, choose your bricklayer; that is the proper reward of the good workman, to be “chosen.” The natural and right system respecting all labour is, that it should be paid at a fixed rate, but the good workman employed, and the bad workman unemployed. The false, unnatural, and destructive system is when the bad workman is allowed to offer his work at half-price, and either take the place of the good, or force him by his competition to work for an inadequate sum.—*U. T. L.*, I.

135. CO-OPERATION.—I especially want you, for one thing, to understand the sense in which the word “co-operation” is used in my books. You will find I am always pleading for it; and

yet I don't at all mean the co-operation of partnership (as opposed to the system of wages) which is now so gradually extending itself among our great firms. . . .

I use the word in a far wider sense, as opposed, not to masterhood, but to *competition*. I do not mean, for instance, by co-operation, that all the master bakers in a town are to give a share of their profits to the men who go out with the bread; but that the masters are not to try to undersell each other, nor seek each to get the other's business, but are all to form one society, selling to the public under a common law of severe penalty for unjust dealing, and at an established price. I do not mean that all bankers' clerks should be partners in the bank; but I do mean that all bankers should be members of a great national body, answerable as a society for all deposits; and that the private business of speculating with other people's money should take another name than that of "banking." And, for final instance, I mean by "co-operation" not only fellowships between trading *firms*, but between trading *nations*; so that it shall no more be thought (as it is now, with ludicrous and vain selfishness) an advantage for one nation to undersell another; and take its occupation away from it; but that the primal and eternal law of vital commerce shall be of all men understood—namely, that every nation is fitted by its character, and the

nature of its territories, for some particular employments or manufactures; and that it is the true interest of every other nation to encourage it in such speciality, and by no means to interfere with, but in all ways forward and protect, its efforts, ceasing all rivalry with it, so soon as it is strong enough to occupy its proper place.—*T. and T.*, I., § 1.

136. LAND.—Bodies of men, or women, then (and much more, as I said before, their souls), must not be bought or sold. Neither must land, nor water, nor air, these being the necessary sustenance of men's bodies and souls.

Yet all these may, on certain terms, be bound, or secured in possession, to particular persons under certain conditions. For instance, it may be proper, at a certain time, to give a man permission to possess land, as you give him permission to marry; and farther, if he wishes it and works for it, to secure to him the land needful for his life; as you secure his wife to him; and make both utterly his own, without in the least admitting his right to buy other people's wives, or fields, or to sell his own.

And the right action of a State respecting its land is, indeed, to secure it in various portions to those of its citizens who deserve to be trusted with it, according to their respective desires and proved capacities; and after having so secured it

to each, to exercise only such vigilance over his treatment of it as the State must give also to his treatment of his wife and servants; for the most part leaving him free, but interfering in cases of gross mismanagement or abuse of power.—*T. and T.*, XXIII., § 150, 151.

137. CAPITALISTS, OR CAPTAINS?—"Nay, but finally, work must be done, and some one must be at the top, some one at the bottom." Granted, my friends. Work must always be, and captains of work must always be; and if you in the least remember the tone of any of my writings, you must know that they are thought unfit for this age, because they are always insisting on need of government, and speaking with scorn of liberty. But I beg you to observe that there is a wide difference between being captains or governors of work, and taking the profits of it. It does not follow, because you are general of an army, that you are to take all the treasure, or land, it wins; (if it fight for treasure or land;) neither, because you are king of a nation, that you are to consume all the profits of the nation's work. Real kings, on the contrary, are known invariably by their doing quite the reverse of this,—by their taking the least possible quantity of the nation's work for themselves. There is no test of real kinghood so infallible as that. Does the crowned creature live simply, bravely,

unostentatiously? probably he *is* a King. Does he cover his body with jewels, and his table with delicates? in all probability he is *not* a King. It is possible he may be, as Solomon was; but that is when the nation shares his splendour with him. Solomon made gold, not only to be in his own palace as stones, but to be in Jerusalem as stones. But, even so, for the most part, these splendid kingdoms expire in ruin, and only the true kingdoms live, which are of royal labourers governing loyal labourers; who, both leading rough lives, establish the true dynasties. Conclusively you will find that because you are king of a nation, it does not follow that you are to gather for yourself all the wealth of that nation; neither, because you are king of a small part of the nation, and lord over the means of its maintenance—over field, or mill, or mine,—are you to take all the produce of that piece of the foundation of national existence for yourself.—*C. W. O.*, II., § 80.

138. GOVERNMENT.—When the crew of a wrecked ship escape in an open boat, and the boat is crowded, the provisions scanty, and the prospect of making land distant, laws are instantly established and enforced which no one thinks of disobeying. An entire equality of claim to the provisions is acknowledged without dispute; and an equal liability to necessary labour. No man

who can row is allowed to refuse his oar; no man, however much money he may have saved in his pocket, is allowed so much as half a biscuit beyond his proper ration. Any riotous person who endangered the safety of the rest would be bound, and laid in the bottom of the boat, without the smallest compunction, for such violation of the principles of individual liberty; and, on the other hand, any child, or woman, or aged person, who was helpless, and exposed to great danger and suffering by their weakness, would receive more than ordinary care and indulgence, not unaccompanied with unanimous self-sacrifice on the part of the labouring crew.

There is never any question under circumstances like these, of what is right and wrong, worthy and unworthy, wise or foolish. If there ~~be~~ any question, there is little hope for boat or crew. The right man is put at the helm; every available hand is set to the oars; the sick are tended, and the vicious restrained, at once, and decisively; or if not, the end is near.

Now, the circumstances of every associated group of human society, contending bravely for national honours and felicity of life, differ only from those thus supposed, in the greater, instead of less, necessity for the establishment of restraining law. There is no point of difference in the difficulties to be met, nor in the rights reciprocally to be exercised. Vice and indolence

are not less, but more, injurious in a nation than in a boat's company; the modes in which they affect the interests of worthy persons being far more complex, and more easily concealed. The right of restraint, vested in those who labour, over those who would impede their labour, is as absolute in the large as in the small society; the equal claim to share in whatever is necessary to the common life (or commonwealth) is as indefeasible; the claim of the sick and helpless to be cared for by the strong with earnest self-sacrifice, is as pitiful and as imperative; the necessity that the governing authority should be in the hands of a true and trained pilot is as clear and as constant. In none of these conditions is there any difference between a nation and a boat's company. The only difference is in this, that the impossibility of discerning the effects of individual error and crime, or of counteracting them by individual effort, in the affairs of a great nation renders it tenfold more necessary than in a small society that direction by law should be sternly established. Assume that your boat's crew is disorderly and licentious, and will, by agreement, submit to no order;—the most troublesome of them will yet be easily discerned; and the chance is that the best man among them knocks him down. Common instinct of self-preservation will make the rioters put a good sailor at the helm, and impulsive pity and occasional help will be, by

heart and hand, here and there given to visible distress. Not so in the ship of the realm. The most troublesome persons in *it* are usually the least recognised for such, and the most active in its management; the best men mind their own business patiently, and are never thought of; the good helmsman never touches the tiller but in the last extremity; and the worst forms of misery are hidden, not only from every eye, but from every thought. On the deck, the aspect is of Cleopatra's galley—under hatches there is a slave hospital; while, finally (and this is the most fatal difference of all), even the few persons who care to interfere energetically, with purpose of doing good, can, in a large society, discern so little of the real state of evil to be dealt with, and judge so little of the best means of dealing with it, that half of their best efforts will be misdirected, and some may even do more harm than good. Whereas it is the sorrowful law of this universe, that evil, even unconscious and unintended, never fails of *its* effect; and in a state where the evil and the good, under conditions of individual "liberty," are allowed to contend together, not only every *stroke* on the Devil's side tells—but every *slip*, (the mistakes of wicked men being as mischievous as their successes); while on the side of right, there will be much direct and fatal defeat, and, even of its measure of victory, half will be fruitless.—*T. and T.*, XII., § 65, 66.

139. POLITICAL APHORISMS.*—1. Any form of government will work, provided the governors are real, and the people obey them: and none will work, if the governors are unreal, or the people disobedient. If you mean to have logs for kings, no quantity of liberty in choice of the wood will be of any profit to you:—nor will the wisest or best governor be able to serve you, if you mean to discuss his orders instead of obeying them.

2. The first duty of government is to see that the people have food, fuel, and clothes. The second, that they have means of moral and intellectual education.

3. Food, fuel, and clothes can only be got out of the ground, or sea, by muscular labour; and no man has any business to have any, unless he has done, if able, the muscular work necessary to produce his portion, or to render (as the labour of a surgeon or a physician renders), equivalent benefit to life. It indeed saves both toil and time that one man should dig, another bake, and

* The violence, or grotesque aspect, of a statement may seem as if I were mocking; but this comes mainly of my endeavour to bring the absolute truth out into pure crystalline structure, unmodified by disguise of custom, or obscurity of language; for the result of that process is continually to reduce the facts into a form so contrary, if theoretical, to our ordinary impressions, and so contrary, if moral, to our ordinary practice, that the straightforward statement of them looks like a jest. . . . These sixteen aphorisms contain, as plainly as I can speak it, the substance of what I have hitherto taught.

another tan ; but the digger, baker, and tanner are alike bound to do their equal day's duty ; and the business of the government is to see that they have done it, before it gives any one of them their dinner.

4. While the daily teaching of God's truth, doing of His justice, and heroic bearing of His sword, are to be required of every human soul according to its ability, the mercenary professions of preaching, law-giving, and fighting must be entirely abolished.

5. Scholars, painters, and musicians may be advisedly kept on due pittance, to instruct or amuse the labourer after, or at, his work ; provided the duty be severely restricted to those who have high special gifts of voice, touch, and imagination ; and that the possessors of these melodious lips, light-fingered hands, and lively brains, do resolutely undergo the normal discipline necessary to ensure their skill ; the people whom they are to please, understanding, always, that they cannot employ these tricking artists without working double-tides themselves, to provide them with beef and ale.

6. The duty of the government, as regards the distribution of its work, is to attend first to the wants of the most necessitous ; therefore, to take particular charge of the back streets of every town ; leaving the fine ones, more or less, according to their finery, to take care of themselves.

And it is the duty of magistrates, and other persons in authority, but especially of all bishops, to know thoroughly the numbers, means of subsistence, and modes of life of the poorest persons in the community, and to be sure that *they* at least are virtuous and comfortable; for if poor persons be not virtuous, after all the wholesome discipline of poverty, what must be the state of the rich, under their perilous trials and temptations? —but, on the other hand, if the poor are made comfortable and good, the rich have a fair chance of entering the kingdom of heaven also, if they choose to live honourably and decently.

7. Since all are to be made to labour for their living, and it is not possible to labour without materials and tools, these must be provided by the government, for all persons, in the necessary quantities. If bricks are to be made, clay and straw must be provided; if sheep are to be kept, grass; if coats are to be made, cloth; if oakum to be picked, oakum. All these raw materials, with the tools for working them, must be provided by the government, at first, free of cost to the labourer, the value of them being returned to it as the first-fruits of his toil; and no pawnbrokers or usurers may be allowed to live by lending sea to fishermen, air to fowlers, land to farmers, crooks to shepherds, or bellows to smiths.

8. When the lands and seas belonging to any nation are all properly divided, cultivated, and

fished, its population cannot be increased, excepting by importing food in exchange for useless articles,—that is to say, by living as the toy-manufacturers of some independent nation, which can both feed itself, and afford to buy toys besides. But no nation can long exist in this servile state. It must either emigrate, and form colonies to assist in cultivating the land which feeds it, or become entirely slavish and debased. The moment any nation begins to import food, its political power and moral worth are ended.

9. All the food, clothing, and fuel required by men, can be produced by the labour of their own arms on the earth and sea; all food is appointed to be so produced, and *must* be so produced, at their peril. If instead of taking the quantity of exercise made necessary to their bodies by God, in the work appointed by God, they take it in hunting and shooting, they become ignorant, irreligious, and finally insane, and seek to live by fighting as well as by hunting; whence the type of Nimrod, in the circle of the Hell-towers, which I desired you to study in Dante. If they do not take exercise at all, they become sensual, and insane in worse ways. *And it is physically impossible that true religious knowledge, or pure morality, should exist among any classes of a nation who do not work with their hands for their bread.*

10. The use of machinery in agriculture throws a certain number of persons out of wholesome

employment, who must thenceforward either do nothing, or mischief. The use of machinery in art destroys the national intellect; and finally renders all luxury impossible. All machinery needful in ordinary life to supplement human or animal labour may be moved by wind or water; while steam, or any modes of *heat-power*, may only be employed justifiably under extreme or special conditions of need; as for speed on main lines of communication, and for raising water from great depths, or other such work beyond human strength.

11. No true luxury, wealth, or religion is possible to dirty persons; nor is it decent or human to attempt to compass any temporal prosperity whatever by the sacrifice of cleanliness. The speedy abolition of all abolishable filth is the first process of education; the principles of which I state in the second group of aphorisms following.

12. All education must be moral first; intellectual secondarily. Intellectual, before—much more, without—moral education, is in completeness impossible; and in incompleteness, a calamity.

13. Moral education begins in making the creature to be educated—clean, and obedient. This must be done thoroughly, and at any cost, and with any kind of compulsion rendered necessary by the nature of the animal, be it dog, child, or man.

14. Moral education consists next in making the creature practically serviceable to other creatures, according to the nature and extent of its own capacities ; taking care that these be healthily developed in such service. It may be a question how long, and to what extent, boys and girls of fine race may be allowed to run in the paddock before they are broken ; but assuredly the sooner they are put to such work as they are able for, the better. Moral education is summed when the creature has been made to do its work with delight, and thoroughly ; but this cannot be until some degree of intellectual education has been given also.

15. Intellectual education consists in giving the creature the faculties of admiration, hope and love. These are to be taught by the study of beautiful Nature ; the sight and history of noble persons ; and the setting forth of noble objects of action.

16. Since all noble persons hitherto existent in the world have trusted in the government of it by a supreme Spirit, and in that trust, or faith, have performed all their great actions, the history of these persons will finally mean the history of their faith ; and the sum of intellectual education will be the separation of what is inhuman, in such faiths, and therefore perishing, from what is human, and, for human creatures, eternally true.—*F. C.*, Letter 67.

140. ROYALTY.—Who shall measure the difference between the power of those who “do and teach,” and who are greatest in the kingdoms of earth, as of heaven—and the power of those who undo, and consume—whose power, at the fullest, is only the power of the moth and the rust? Strange! to think how the Moth-kings lay up treasures for the moth; and the Rust-kings, who are to their people’s strength as rust to armour, lay up treasures for the rust; and the Robber-kings, treasures for the robber; but how few kings have ever laid up treasures that needed no guarding—treasures of which, the more thieves there were, the better! Broidered robe, only to be rent; helm and sword, only to be dimmed; jewel and gold, only to be scattered;—there have been three kinds of kings who have gathered these. Suppose there ever should arise a Fourth order of kings, who had read, in some obscure writing of long ago, that there was a Fourth kind of treasure, which the jewel and gold could not equal, neither should it be valued with pure gold. A web made fair in the weaving, by Athena’s shuttle; an armour, forged in divine fire by Vulcanian force; a gold to be mined in the very sun’s red heart, where he sets over the Delphian cliffs;—deep-pictured tissue;—impenetrable armour;—potable gold;—the three great Angels of Conduct, Toil, and Thought, still calling to us, and waiting at the posts of our doors, to lead us, with their winged

power, and guide us, with their unerring eyes, by the path which no fowl knoweth, and which the vulture's eye has not seen ! Suppose kings should ever arise, who heard and believed this word, and at last gathered and brought forth treasures of—Wisdom—for their people ?

Think what an amazing business *that* would be ! How inconceivable, in the state of our present national wisdom ! That we should bring up our peasants to a book exercise instead of a bayonet exercise !—organise, drill, maintain with pay, and good generalship, armies of thinkers, instead of armies of stabbers !—find national amusement in reading-rooms as well as rifle-grounds ; give prizes for a fair shot at a fact, as well as for a leaden splash on a target. What an absurd idea it seems, put fairly in words, that the wealth of the capitalists of civilized nations should ever come to support literature instead of war !—*S. and L.*, I., § 45, 46.

141. ARISTOCRACY.—The upper classes, broadly speaking, are originally composed of the best-bred (in the merely animal sense of the term), the most energetic, and most thoughtful, of the population, who either by strength of arm seize the land from the rest, and make slaves of them, or bring desert land into cultivation, over which they have therefore, within certain limits, true personal right ; or, by industry, accumulate

other property, or by choice devote themselves to intellectual pursuits, and, though poor, obtain an acknowledged superiority of position, shown by benefits conferred in discovery, or in teaching, or in gifts of art. This is all in the simple course of the law of nature; and the proper offices of the upper classes, thus distinguished from the rest, become, therefore, in the main threefold:—

(A) Those who are strongest of arm have for their proper function the restraint and punishment of vice, and the general maintenance of law and order; releasing only from its original subjection to their power that which truly deserves to be emancipated.

(B) Those who are superior by forethought and industry, have for their function to be the providences of the foolish, the weak, and the idle; and to establish such systems of trade and distribution of goods as shall preserve the lower orders from perishing by famine, or any other consequence of their carelessness or folly, and to bring them all, according to each man's capacity, at last into some harmonious industry.

(C) The third class, of scholars and artists, of course, have for function the teaching and delighting of the inferior multitude.

The office of the upper classes, then, as a body, is to keep order among their inferiors, and raise them always to the nearest level with themselves of which those inferiors are capable. So far as

they are thus occupied, they are invariably loved and revered intensely by all beneath them, and reach, themselves, the highest types of human power and beauty.

This, then, being the natural ordinance and function of aristocracy, its corruption, like that of all other beautiful things under the Devil's touch, is a very fearful one. Its corruption is, that those who ought to be the rulers and guides of the people, forsake their task of painful honourableness; seek their own pleasure and pre-eminence only; and use their power, subtlety, conceded influence, prestige of ancestry, and mechanical instrumentality of martial power, to make the lower orders toil for them, and feed and clothe them for nothing, and become in various ways their living property, goods, and chattels, even to the point of utter regardlessness of whatever misery these serfs may suffer through such insolent domination, or they themselves, their masters, commit of crime to enforce it.—*T. and T.*, XXII., § 137-139.

142. COMMONALTY.—Since the essence of wealth consists in its authority over men,* if the apparent or nominal wealth fail in this power, it fails in essence; in fact, ceases to be wealth at all. It does not appear lately in England, that our authority over men is absolute. The servants

[* See § 116 of this volume.]

show some disposition to rush riotously upstairs, under an impression that their wages are not regularly paid. We should augur ill of any gentleman's property to whom this happened every other day in his drawing-room.

So, also, the power of our wealth seems limited as respects the comfort of the servants, no less than their quietude. The persons in the kitchen appear to be ill-dressed, squalid, half-starved. One cannot help imagining that the riches of the establishment must be of a very theoretical and documentary character.

Finally. Since the essence of wealth consists in power over men, will it not follow that the nobler and the more in number the persons are over whom it has power, the greater the wealth? Perhaps it may even appear, after some consideration, that the persons themselves *are* the wealth—that these pieces of gold with which we are in the habit of guiding them, are, in fact, nothing more than a kind of Byzantine harness or trappings, very glittering and beautiful in barbaric sight, wherewith we bridle the creatures; but that if these same living creatures could be guided without the fretting and jingling of the Byzants in their mouths and ears, they might themselves be more valuable than their bridles. In fact, it may be discovered that the true veins of wealth are purple—and not in Rock, but in Flesh—perhaps even that the final outcome and

consummation of all wealth is in the producing as many as possible full-breathed, bright-eyed, and happy-hearted human creatures. Our modern wealth, I think, has rather a tendency the other way;—most political economists appearing to consider multitudes of human creatures not conducive to wealth, or at best conducive to it only by remaining in a dim-eyed and narrow-chested state of being.

Nevertheless, it is open, I repeat, to serious question, which I leave to the reader's pondering, whether, among national manufactures, that of Souls of a good quality may not at last turn out a quite leadingly lucrative one? Nay, in some far-away and yet undreamt-of hour, I can even imagine that England may cast all thoughts of possessive wealth back to the barbaric nations among whom they first arose; and that, while the sands of the Indus and adamant of Golconda may yet stiffen the housings of the charger, and flash from the turban of the slave, she, as a Christian mother, may at last attain to the virtues and the treasures of a Heathen one, and be able to lead forth her Sons, saying,—“These are MY Jewels.”—*U. T. L.*, II.

143. A MODEL COMMONWEALTH.—A little canton, four miles square, and which did not wish to be six miles square! A little town, composed of a cluster of watermills, a street of penthouses,

two wooden bridges, two dozen of stone houses on a little hill, and three or four perpendicular lanes up and down the hill. The four miles of acreage round, in grass, with modest gardens, and farm dwelling houses; the people, pious, learned, and busy, to a man, to a woman—to a boy, to a girl, of them; progressing to and fro mostly on their feet, and only where they had business. And this bird's-nest of a place, to be the centre of religious and social thought, and of physical beauty, to all living Europe! That is to say, thinking and designing Europe,—France, Germany, and Italy. They, and their pieties, and their prides, their arts and their insanities, their wraths and slaughters, springing and flowering, building and fortifying, foaming and thundering round this inconceivable point of patience: the most lovely spot, and the most notable, without any possible dispute, of the European universe; yet the nations do not covet it, do not gravitate to it,—what is more wonderful, do not make a wilderness of it. They fight their battles at Chalons and Leipsic; they build their cotton mills on the Aire, and leave the Rhone running with a million of Aire power,—all pure. They build their pleasure houses on Thames shingle, and Seine mud, to look across to Lambeth, and —whatever *is* on the other side of the Seine. They found their military powers in the sand of Berlin, and leave this precipice-guarded plain in

peace. And yet it rules them,—is the focus of thought to them, and of passion, of science, and of *contrat social*; of rational conduct, and of decent—and other—manners. Saussure's school and Calvin's,—Rousseau's and Byron's,—Turner's,—

And of course, I was going to say, mine; but I didn't write all that last page to end so. Yet Geneva had better have ended with educating me and the likes of me, instead of the people who have hold of it now, with their polypous knots of houses, communal with "London, Paris, and New York."

Beneath which, and on the esplanades of the modern casino, New York and London now live—no more the Genevese. What their home once was, I must try to tell, as I saw it.

First, it was a notable town for keeping all its poor,—inside of it. In the very centre, where an English town has its biggest square, and its Exchange on the model of the Parthenon, built for the sake of the builder's commission on the cost; there, on their little pile-propped island, and by the steep lane-sides, lived the Genevoise poor; in their garrets,—their laborious upper spinning or watch-wheel cutting rooms,—their dark niches and angles of lane: mostly busy; the infirm and old all seen to and cared for, their porringers filled and their pallet-beds made, by household care.

But, outside the ramparts, no more poor. A sputter, perhaps, southward, along the Savoy road; but in all the champaign round, no mean rows of cubic lodgings with Doric porches; no squalid fields of mud and thistles; no deserts of abandoned brickfield and insolvent kitchen garden. On the instant, outside Geneva gates, perfectly smooth, clean, trim-hedged or prim-walled country roads; the main broad one intent on far-away things, its signal-posts inscribed "Route de Paris;" branching from it, right and left, a labyrinth of equally well kept ways for fine carriage wheels, between the gentlemen's houses with their farms; each having its own fifteen to twenty to fifty acres of mostly meadow, rich-waving always (in my time for being there) with grass and flowers, like a kaleidoscope. Stately plane trees, aspen and walnut, — sometimes in avenue, — casting breezy, never gloomy, shade round the dwelling-house. A dwelling-house indeed, all the year round; no travelling from it to fairer lands possible; no shutting up for seasons in town; hay-time and fruit-time, school-time and play, for generation after generation, within the cheerful white domicile with its green shutters and shingle roof, — pinnacled perhaps, humorously, at the corners, glittering on the edges with silvery tin. "Kept up" the whole place, and all the neighbours' places, not ostentatiously, but perfectly: enough gardeners to mow, enough vintagers to

press, enough nurses to nurse; no foxes to hunt, no birds to shoot; but every household felicity possible to prudence and honour, felt and fulfilled from infancy to age.

Where the grounds came down to the water-side, they were mostly built out into it, till the water was four or five feet deep, lapping up, or lashing, under brecze, against the terrace wall. Not much boating; fancy wherries, unmanageable, or too adventurous, upon the wild blue; and Swiss boating a serious market and trade business, unfashionable in the high rural empyrean of Geneva. But between the Hôtel des Etrangers, (one of these country-houses open to the polite stranger, some half-mile out of the gates, where Salvador took us in '33 and '35) and the town, there were one or two landing-places for the raft-like flat feluccas; and glimpses of the open lake and things beyond,—glimpses only, shut off quickly by garden walls, until one came to the inlet of lake-water moat which bent itself under the ramparts back to the city gate. This was crossed, for people afoot who did not like going round to that main gate, by the delicatest of filiform suspension bridges; strong enough it looked to carry a couple of lovers over in safety, or a nursemaid and children, but nothing heavier. One was allowed to cross it for a centime, which seemed to me always a most profitable transaction, the portress receiving placidly a sort of dirty

flattened sixpence (I forget its name), and returning me a waistcoat pocketful of the loveliest little clean-struck centimes; and then one might stand on the bridge any time, in perfect quiet. (The Genevese didn't like paying the centime, and went round by the gate.) Two swans, drifting about underneath, over a couple of fathoms of purest green water, and the lake really opening from the moat, exactly where the Chamouni range of aiguilles rose beyond it far away. In our town walks we used always to time getting back to the little bridge at sunset, there to wait and watch.

That was the way of things on the north side; on the south, the town is still, in the main buildings of it, as then; the group of officially aristocratic houses round the cathedral and college presenting the same inaccessible sort of family dignity that they do to-day; only, since then, the Geneva Liberals——Well, I will not say what they have done; the main town stands still on its height of pebble-gravel, knit almost into rock; and still the upper terraces look across the variously mischievous Liberal works to the open southern country, rising in steady slope of garden, orchard, and vineyard—sprinkled with pretty farm-houses and bits of château, like a sea-shore with shells; rising always steeper and steeper, till the air gets rosy in the distance, then blue, and the great walnut trees have become

dots, and the farmsteads, minikin as if they were the fairy-finest of models made to be packed in a box; and then, instant—above vineyard, above farmstead, above field and wood, leaps up the Salève cliff, two thousand feet into the air.

I don't think anybody who goes to Geneva ever sees the Salève. For the most part, no English creature ever *does* see farther than over the way; and the Salève, unless you carefully peer into it, and make out what it is, pretends to be nothing,—a long, low swell like the South Downs, I fancy most people take it for, and look no more. Yet there are few rocks in the high Alps more awful than the "Angle" of the Salève, at its foot—seven Shakespere's Cliffs set one on the top of another, and all of marble.*

On the other side of the high town the houses stand closer, leaving yet space for a little sycamore-shaded walk, whence one looks down on the whole southern reach of lake, opening wide to the horizon, and edged there like the sea, but in the summer sunshine looking as if it was the one well of blue which the sunbeams drank to make the sky of. Beyond it, ghostly ranges of incredible mountains—the Dent d'Oche, and first cliffs towards Fribourg; to the west, the long wave of Jura, fading into the air above Neuchâtel.

* Not Parian, indeed, nor Carrara, but an extremely compact limestone, in which the compressed faulted veins are of marble indeed, and polish beautifully.

That was the view for full noon, when the lake was brightest and bluest. Then you fell down a perpendicular lane into the lower town again, and you went to Mr. Bautte's.

Virtually there was no other jeweller in Geneva, in the great times. There were some respectable, uncompetitive shops, not dazzling, in the main street; and smaller ones, with an average supply of miniature watches, that would go well for ten years; and uncostly, but honest, trinketry. But one went to Mr. Bautte's with awe, and of necessity, as one did to one's bankers. There was scarcely any external sign of Bautte whatever—a small brass plate at the side of a narrow arched door, into an alley—into a secluded alley—leading into a monastic courtyard, out of which—or rather out of the alley, where it opened to the court, you ascended a winding stair, wide enough for two only, and came to a green door, swinging, at the top of it; and there you paused to summon courage to enter.

A not large room, with a single counter at the farther side. Nothing shown on the counter. Two confidential attendants behind it, and—it might possibly be Mr. Bautte!—or his son—or his partner—or anyhow the Ruling power—at his desk beside the back window. You told what you wanted: it was necessary to know your mind, and to be sure you *did* want it; there was no showing of things for temptation at Bautte's. You wanted a bracelet, a brooch, a watch—plain

or enamelled. Choice of what was wanted was quietly given. There were no big stones, nor blinding galaxies of wealth. Entirely sound workmanship in the purest gold that could be worked; fine enamel for the most part, for colour, rather than jewels; and a certain Baudesque subtlety of linked and wreathed design, which the experienced eye recognised when worn in Paris or London. Absolutely just and moderate price; wear,—to the end of your days. You came away with a sense of duty fulfilled, of treasure possessed, and of a new foundation to the respectability of your family.

You returned into the light of the open street with a blissful sense of a parcel being made up to be sent after you, and in the consequently calm expatiation of mind, went usually to watch the Rhone.

Baudes was in the main street, out of which one caught glimpses, down the short cross ones, of the passing water; as at Sandgate, or the like fishing towns, one got peeps of the sea. With twenty steps you were beside it.

For all other rivers there is a surface, and an underneath, and a vaguely displeasing idea of the bottom. But the Rhone flows like one lambent jewel; its surface is nowhere, its ethereal self is everywhere, the iridescent rush and translucent strength of it blue to the shore, and radiant to the depth.

Fifteen feet thick, of not flowing, but flying water ; not water, neither,—melted glacier, rather, one should call it ; the force of the ice is with it, and the wreathing of the clouds, the gladness of the sky, and the continuance of Time.

Waves of clear sea are, indeed, lovely to watch, but they are always coming or gone, never in any taken shape to be seen for a second. But here was one mighty wave that was always itself, and every fluted swirl of it, constant as the wreathing of a shell. No wasting away of the fallen foam, no pause for gathering of power, no helpless ebb of discouraged recoil ; but alike through bright day and lulling night, the never-pausing plunge, and never-fading flash, and never-hushing whisper, and, while the sun was up, the ever-answering glow of unearthly aquamarine, ultramarine, violet-blue, gentian-blue, peacock-blue, river-of-paradise blue, glass of a painted window melted in the sun, and the witch of the Alps flinging the spun tresses of it for ever from her snow.

The innocent way, too, in which the river used to stop to look into every little corner. Great torrents always seem angry, and great rivers too often sullen ; but there is no anger, no disdain, in the Rhone. It seemed as if the mountain stream was in mere bliss at recovering itself again out of the lake-sleep, and raced because it rejoiced in racing, fain yet to return and stay. There were pieces of wave that danced all day as if

Perdita were looking on to learn; there were little streams that skipped like lambs and leaped like chamois; there were pools that shook the sunshine all through them, and were rippled in layers of overlaid ripples, like crystal sand; there were currents that twisted the light into golden braids, and inlaid the threads with turquoise enamel; there were strips of stream that had certainly above the lake been millstreams, and were looking busily for mills to turn again; there were shoots of stream that had once shot fearfully into the air, and now sprang up again laughing that they had only fallen a foot or two;—and in the midst of all the gay glittering and eddied lingering, the noble bearing by of the midmost depth, so mighty, yet so terrorless and harmless, with its swallows skimming instead of petrels, and the dear old decrepit town as safe in the embracing sweep of it as if it were set in a brooch of sapphire.—*Præterita*, II. v.

144. THERE IS NO WEALTH BUT LIFE. Life, including all its powers of love, of joy, and of admiration. That country is the richest which nourishes the greatest number of noble and happy human beings; that man is richest who, having perfected the functions of his own life to the utmost, has also the widest helpful influence, both personal, and by means of his possessions, over the lives of others.

A strange political economy; the only one, nevertheless, that ever was or can be: all political economy founded on self-interest being but the fulfilment of that which once brought schism into the Policy of angels, and ruin into the Economy of Heaven.

“The greatest number of human beings noble and happy.” But is the nobleness consistent with the number? Yes, not only consistent with it, but essential to it. The maximum of life can only be reached by the maximum of virtue. In this respect the law of human population differs wholly from that of animal life. The multiplication of animals is checked only by want of food, and by the hostility of races; the population of the gnat is restrained by the hunger of the swallow, and that of the swallow by the scarcity of gnats. Man, considered as an animal, is indeed limited by the same laws: hunger, or plague, or war, are the necessary and only restraints upon his increase,—effectual restraints hitherto,—his principal study having been how most swiftly to destroy himself, or ravage his dwelling-places, and his highest skill directed to give range to the famine, seed to the plague, and sway to the sword. But, considered as other than an animal, his increase is not limited by these laws. It is limited only by the limits of his courage and his love. Both of these *have* their bounds; and ought to have; his race has its bounds also; but these

have not yet been reached, nor will be reached for ages.

In all the ranges of human thought I know none so melancholy as the speculations of political economists on the population question. It is proposed to better the condition of the labourer by giving him higher wages. "Nay," says the economist,—“if you raise his wages, he will either people down to the same point of misery at which you found him, or drink your wages away.” He will. I know it. Who gave him this will? Suppose it were your own son of whom you spoke, declaring to me that you dared not take him into your firm, nor even give him his just labourer's wages, because if you did he would die of drunkenness, and leave half a score of children to the parish. “Who gave your son these dispositions?”—I should enquire. Has he them by inheritance or by education? By one or other they *must* come; and as in him, so also in the poor. Either these poor are of a race essentially different from ours, and unredeemable (which, however often implied, I have heard none yet openly say), or else by such care as we have ourselves received, we may make them continent and sober as ourselves—wise and dispassionate as we are—models arduous of imitation. “But,” it is answered, “they cannot receive education.” Why not?—*U. T. L., IV.*

145. GOVERNMENT BY EXAMPLE.—Only a few days since I had a letter from the wife of a village rector, a man of common sense and kindness, who was greatly troubled in his mind because it was precisely the men who got highest wages in summer that came destitute to his door in the winter. Destitute, and of riotous temper—for their method of spending wages in their period of prosperity was by sitting two days a week in the tavern parlour, ladling port wine, not out of bowls, but out of buckets. Well, gentlemen, who taught them that method of festivity?

Thirty years ago, I, a most inexperienced freshman, went to my first college supper; at the head of the table sat a nobleman of high promise and of admirable powers, since dead of palsy; there also we had in the midst of us, not buckets, indeed, but bowls as large as buckets; there also, we helped ourselves with ladles. There (for this beginning of college education was compulsory), I choosing ladlefuls of punch instead of claret, because I was then able, unperceived, to pour them into my waistcoat instead of down my throat, stood it out to the end, and helped to carry four of my fellow students, one of them the son of the head of a college, head foremost, down stairs and home.

Such things are no more; but the fruit of them remains, and will for many a day to come. The labourers whom you cannot now shut out of the ale-house are only the too faithful disciples of the

gentlemen who were wont to shut themselves into the dining-room. The gentlemen have not thought it necessary, in order to correct their own habits, to diminish their incomes; and, believe me, the way to deal with your drunken workman is not to lower his wages,—but to mend his wits.—*C. W. O.*, IV., § 148, 149.

146. A PLEA FOR HAND-LABOUR.—For the continual education of the whole people, and for their future happiness, they must have such consistent employment as shall develop all the powers of the fingers, and the limbs, and the brain: and that development is only to be obtained by hand-labour, of which you have these four great divisions—hand-labour on the earth, hand-labour on the sea, hand-labour in art, hand-labour in war.

Hand-labour on the earth, the work of the husbandman and of the shepherd;—to dress the earth and to keep the flocks of it—the first task of man, and the final one—the education always of noblest lawgivers, kings and teachers; the education of Hesiod, of Moses, of David, of all the true strength of Rome; and all its tenderness: the pride of Cincinnatus, and the inspiration of Virgil. Hand-labour on the earth, and the harvest of it brought forth with singing:—not steam-piston labour on the earth, and the harvest of it brought forth with steam-whistling. You will

have no prophet's voice accompanied by that shepherd's pipe, and pastoral symphony. Do you know that lately, in Cumberland, in the chief pastoral district of England,—in Wordsworth's own home,—a procession of villagers on their festa day provided for themselves, by way of music, a steam-plough whistling at the head of them?

Give me patience while I put the principle of machine labour before you, as clearly and in as short compass as possible; it is one that should be known at this juncture. Suppose a farming proprietor needs to employ a hundred men on his estate, and that the labour of these hundred men is enough, but not more than enough, to till all his land, and to raise from it food for his own family, and for the hundred labourers. He is obliged, under such circumstances, to maintain all the men in moderate comfort, and can only by economy accumulate much for himself. But, suppose he contrive a machine that will easily do the work of fifty men, with only one man to watch it. This sounds like a great advance in civilisation. The farmer of course gets his machine made, turns off the fifty men, who may starve or emigrate at their choice, and now he can keep half of the produce of his estate, which formerly went to feed them, all to himself. That is the essential and constant operation of machinery among us at this moment.

Nay, it is at first answered; no man can in reality keep half the produce of an estate to himself, nor can he in the end keep more than his own human share of anything; his riches must diffuse themselves at some time; he must maintain somebody else with them, however he spends them. That is mainly true,—not altogether so, for food and fuel are in ordinary circumstances personally wasted by rich people, in quantities which would save many lives. One of my own great luxuries, for instance, is candlelight—and I probably burn, for myself alone, as many candles during the winter, as would comfort the old eyes, or spare the young ones, of a whole rushlighted country village. Still, it is mainly true that it is not by their personal waste that rich people prevent the lives of the poor. This is the way they do it. Let me go back to my farmer. He has got his machine made, which goes creaking, screaming, and occasionally exploding, about modern Arcadia. He has turned off his fifty men to starve. Now, at some distance from his own farm, there is another on which the labourers were working for their bread in the same way, by tilling the land. The machinist sends over to these, saying—“I have got food enough for you without your digging or ploughing any more. I can maintain you in other occupations instead of ploughing that land; if you rake in its gravel you will find some hard stones—you shall grind those

on mills till they glitter ; then, my wife shall wear a necklace of them. Also, if you turn up the meadows below you will find some fine white clay, of which you shall make a porcelain service for me : and the rest of the farm I want for pasture for horses for my carriage—and you shall groom them, and some of you ride behind the carriage with staves in your hands, and I will keep you much fatter for doing that than you can keep yourselves by digging.”

Well—but it is answered, are we to have no diamonds, nor china, nor pictures, nor footmen, then—but all to be farmers ? I am not saying what we ought to do, I want only to show you with perfect clearness first what we *are doing* ; and that, I repeat, is the upshot of machine-con-
triving in this country. And observe its effect on the national strength. Without machines, you have a hundred and fifty yeomen ready to join for defence of the land. You get your machine, starve fifty of them, make diamond-cutters or footmen of as many more, and for your national defence against an enemy, you have now, and *can* have, only fifty men, instead of a hundred and fifty ; these also now with minds much alienated from you as their chief, and the rest, lapidaries or footmen ;—and a steam plough.

That is one effect of machinery ; but at all events, if we have thus lost in men, we have gained in riches ; instead of happy human souls, we have at

least got pictures, china, horses, and are ourselves better off than we were before. But very often, and in much of our machine-contriving, even *that* result does not follow. We are not one whit the richer for the machine, we only employ it for our amusement. For observe, our gaining in riches depends on the men who are out of employment consenting to be starved, or sent out of the country. But suppose they do not consent passively to be starved, but some of them become criminals, and have to be taken charge of and fed at a much greater cost than if they were at work, and others, paupers, rioters, and the like, then you attain the real outcome of modern wisdom and ingenuity. You had your hundred men honestly at country work ; but you don't like the sight of human beings in your fields ; you like better to see a smoking kettle. You pay, as an amateur, for that pleasure, and you employ your fifty men in picking oakum, or begging, rioting, and thieving.

By hand-labour, therefore, and that alone, we are to till the ground. By hand-labour also to plough the sea ; both for food, and in commerce, and in war : not with floating kettles there neither, but with hempen bridle, and the winds of heaven in harness. That is the way the power of Greece rose on her Egean, the power of Venice on her Adria, of Amalfi in her blue bay, of the Norman sea-riders from the North Cape to Sicily :—so, your own dominion also of the past. . . .

Agriculture, then, by the hand or by the plough drawn only by animals; and shepherd and pastoral husbandry, are to be the chief schools of Englishmen. And this most royal academy of all academies you have to open over all the land, purifying your heaths and hills, and waters, and keeping them full of every kind of lovely natural organism, in tree, herb, and living creature. All land that is waste and ugly, you must redeem into ordered fruitfulness; all ruin, desolateness, imperfectness of hut or habitation, you must do away with; and throughout every village and city of your English dominion, there must not be a hand that cannot find a helper, nor a heart that cannot find a comforter.

“How impossible!” I know, you are thinking. Ah! So far from impossible, it is easy, it is natural, it is necessary, and I declare to you that, sooner or later, it *must be done*, at our peril. If now our English lords of land will fix this idea steadily before them; take the people to their hearts, trust to their loyalty, lead their labour;—then indeed there will be princes again in the midst of us, worthy of the island throne.—*C. IV. O.*, IV., § 151–158.

147. A NEW ARCADY.—All England may, if it so chooses, become one manufacturing town; and Englishmen, sacrificing themselves to the good of general humanity, may live diminished

lives in the midst of noise, of darkness, and of deadly exhalation. But the world cannot become a factory, nor a mine. No amount of ingenuity will ever make iron digestible by the million, nor substitute hydrogen for wine. Neither the avarice nor the rage of men will ever feed them ; and however the apple of Sodom and the grape of Gomorrah may spread their table for a time with dainties of ashes, and nectar of asps,—so long as men live by bread, the far away valleys must laugh as they are covered with the gold of God, and the shouts of His happy multitudes ring round the winepress and the well.

Nor need our more sentimental economists fear the too wide spread of the formalities of a mechanical agriculture. The presence of a wise population implies the search for felicity as well as for food ; nor can any population reach its maximum but through that wisdom which “re-joices” in the habitable parts of the earth. The desert has its appointed place and work ; the eternal engine, whose beam is the earth’s axle, whose beat is its year, and whose breath is its ocean, will still divide imperiously to their desert kingdoms bound with unfurrowable rock, and swept by unarrested sand, their powers of frost and fire : but the zones and lands between, habitable, will be loveliest in habitation. The desire of the heart is also the light of the eyes. No scene is continually and untiringly loved, but

one rich by joyful human labour; smooth in field; fair in garden; full in orchard; trim, sweet, and frequent in homestead; ringing with voices of vivid existence. No air is sweet that is silent; it is only sweet when full of low currents of under sound—triplets of birds, and murmur and chirp of insects, and deep-toned words of men, and wayward trebles of childhood. As the art of life is learned, it will be found at last that all lovely things are also necessary;—the wild flower by the wayside, as well as the tended corn; and the wild birds and creatures of the forest, as well as the tended cattle; because man doth not live by bread only, but also by the desert manna; by every wondrous word and unknowable work of God. Happy, in that he knew them not, nor did his fathers know; and that round about him reaches yet into the infinite, the amazement of his existence.

Note, finally, that all effectual advancement towards this true felicity of the human race must be by individual, not public effort. Certain general measures may aid, certain revised laws guide, such advancement; but the measure and law which have first to be determined are those of each man's home. We continually hear it recommended by sagacious people to complaining neighbours (usually less well placed in the world than themselves), that they should "remain content in the station in which Providence

has placed them." There are perhaps some circumstances of life in which Providence has no intention that people *should* be content. Nevertheless, the maxim is on the whole a good one; but it is peculiarly for home use. That your neighbour should, or should not, remain content with *his* position, is not your business; but it is very much your business to remain content with your own. What is chiefly needed in England at the present day is to show the quantity of pleasure that may be obtained by a consistent, well-administered competence, modest, confessed, and laborious. We need examples of people who, leaving Heaven to decide whether they are to rise in the world, decide for themselves that they will be happy in it, and have resolved to seek—not greater wealth, but simpler pleasure; not higher fortune, but deeper felicity; making the first of possessions, self-possession; and honouring themselves in the harmless pride and calm pursuits of peace.—*U. T. L.*, IV.

148. PEACE ON EARTH.—Have you ever thought seriously of the meaning of that blessing given to the peacemakers? People are always expecting to get peace in heaven; but you know whatever peace they get there will be ready made. Whatever making of peace *they* can be blest for, must be on the earth here: not the taking of arms against, but the building of nests amidst, its

“sea of troubles.” Difficult enough, you think? Perhaps so, but I do not see that any of us try. We complain of the want of many things—we want votes, we want liberty, we want amusement, we want money. Which of us feels, or knows, that he wants peace?

There are two ways of getting it, if you do want it. The first is wholly in your own power; to make yourselves nests of pleasant thoughts. Those are nests on the sea indeed, but safe beyond all others; only they need much art in the building. None of us yet know, for none of us have yet been taught in early youth, what fairy palaces we may build of beautiful thought—proof against all adversity. Bright fancies, satisfied memories, noble histories, faithful sayings, treasure-houses of precious and restful thoughts, which care cannot disturb, nor pain make gloomy, nor poverty take away from us—houses built without hands, for our souls to live in.

And in actual life, let me assure you, in conclusion, the first “wisdom of calm,” is to plan, and resolve to labour for, the comfort and beauty of a home such as, if we could obtain it, we would quit no more. Not a compartment of a model lodging-house, not the number so-and-so of Paradise Row; but a cottage all of our own, with its little garden, its pleasant view, its surrounding fields, its neighbouring stream, its healthy air, and clean kitchen, parlours, and bedrooms. Less

than this, no man should be content with for his nest ; more than this few should seek : but if it seem to you impossible, or wildly imaginary, that such houses should ever be obtained for the greater part of the English people, again believe me, the obstacles which are in the way of our obtaining them are the things which it must be the main object now of all true science, true art, and true literature to overcome. Science does its duty, not in telling us the causes of spots in the sun ; but in explaining to us the laws of our own life, and the consequences of their violation. Art does its duty, not in filling monster galleries with frivolous, or dreadful, or indecent pictures ; but in completing the comforts and refining the pleasures of daily occurrence, and familiar service : and literature does its duty, not in wasting our hours in political discussion, or in idle fiction ; but in raising our fancy to the height of what may be noble, honest, and felicitous in actual life ;—in giving us, though we may ourselves be poor and unknown, the companionship of the wisest fellow-spirits of every age and country,—and in aiding the communication of clear thoughts and faithful purposes, among distant nations, which will at last breathe calm upon the sea of lawless passion, and change into such halcyon days the winter of the world, that the birds of the air may have their nests in peace, and the Son of Man, where to lay His Head.—*E. N.*, IX., § 204–206.

149. THE FUTURE OF ENGLAND.—That, believe me, is the work you have to do in England; and out of England you have room for everything else you care to do. Are her dominions in the world so narrow that she can find no place to spin cotton in but Yorkshire? We may organise emigration into an infinite power. We may assemble troops of the more adventurous and ambitious of our youth; we may send them on truest foreign service, founding new seats of authority, and centres of thought, in uncultivated and unconquered lands; retaining the full affection to the native country no less in our colonists than in our armies, teaching them to maintain allegiance to their fatherland in labour no less than in battle; aiding them with free hand in the prosecution of discovery, and the victory over adverse natural powers; establishing seats of every manufacture in the climates and places best fitted for it, and bringing ourselves into due alliance and harmony of skill with the dexterities of every race, and the wisdoms of every tradition and every tongue.

And then you may make England itself the centre of the learning, of the arts, of the courtesies and felicities of the world. You may cover her mountains with pasture; her plains with corn, her valleys with the lily, and her gardens with the rose. You may bring together there in peace

the wise and the pure, and the gentle of the earth, and by their word, command through its farthest darkness the birth of "God's first creature, which was Light." You know whose words those are; the words of the wisest of Englishmen. He, and with him the wisest of all other great nations, have spoken always to men of this hope, and they would not hear. Plato, in the dialogue of Critias, his last, broken off at his death,—Pindar, in passionate singing of the fortunate islands,—Virgil, in the prophetic tenth eclogue,—Bacon, in his fable of the New Atlantis,—More, in the book which, too impatiently wise, became the bye-word of fools—these, all, have told us with one voice what we should strive to attain; *they* not hopeless of it, but for our follies forced, as it seems, by heaven, to tell us only partly and in parables, lest we should hear them and obey.

Shall we never listen to the words of these wisest of men? Then listen at least to the words of your children—let us in the lips of babes and sucklings find our strength; and see that we do not make them mock instead of pray, when we teach them, night and morning, to ask for what we believe never can be granted;—that the will of the Father,—which is, that His creatures may be righteous and happy,—should be done, *on earth*, as it is in Heaven.—*C. W. O.*, IV., § 148–160.

150. MODERN ITALY.—This day last year, I was walking with a dear friend, and resting long, laid on the dry leaves, in the sunset, under the vineyard-trellises of the little range of hills which, five miles west of Verona, look down on the Lago di Garda.

It was a Sunday evening, golden and calm ; all the vine leaves quiet ; and the soft clouds held at pause in the west, round the mountains that Virgil knew so well, blue above the level reeds of Mincio. But we had to get under the crest of the hill, and lie down under cover, as if avoiding an enemy's fire, to get out of hearing of the discordant practice, in fanfaronade, of the military recruits of the village,—modern Italy, under the teaching of the Marsyas of Mincio, delighting herself on the Lord's day in that, doubtless, much civilised, but far from mellifluous manner ; triumphing that her monasteries were now for the most part turned into barracks, and her chapels into stables. We, for our own part, in no wise exultant nor exhilarated, but shrinking down under the shelter of the hill, and shadows of its fruitful roofs, talked, as the sun went down.

We talked of the aspect of the village which had sent out its active life, marching to these new melodies ; and whose declining life we had seen as we drove through it, half an hour before. An old, far-straggling village, its main street

following the brow of the hill, with gardens at the backs of the houses, looking towards the sacred mountains and the uncounted towers of purple Verona.

If ever peace, and joy, and sweet life on earth might be possible for men, it is so here, and in such places,—few, on the wide earth, but many in the bosom of infinitely blessed, infinitely desolate Italy. Its people were sitting at their doors, quietly working—the women at least,—the old men at rest behind them. A worthy and gentle race; but utterly poor, utterly untaught the things that in *this* world make for their peace. Taught anciently, other things, by the steel of Ezzelin; taught anew the same lesson, by the victor of Arcola, and the vanquished of Solferino,—and the supreme evil risen on the ruin of both.

There they sate—the true race of Northern Italy, mere prey for the vulture,—patient, silent, hopeless, careless: infinitude of accustomed and bewildered sorrow written in every line of their faces, unnerving every motion of their hands, slackening the spring in all their limbs. And their blood has been poured out like water, age after age, and risen round the wine-press, even to the horse-bridles. And of the peace on earth, and the good will towards men, which He who trod the wine-press alone, and of the people there was none with Him—died to bring

them, they have heard by the hearing of the ear, —their eyes have not seen.—*F. C.*, Letter 84.

151. THE BELLS OF CLUSE.—I had been, for six months in Italy, never for a single moment quit of liability to interruption of thought. By day or night, whenever I was awake, in the streets of every city, there were entirely monstrous and inhuman noises in perpetual recurrence. The violent rattle of carriages, driven habitually in brutal and senseless haste, or creaking and thundering under loads too great for their cattle, urged on by perpetual roars and shouts: wild bellowing and howling of obscene wretches far into the night: clashing of church bells, in the morning, dashed into reckless discord, from twenty towers at once, as if rung by devils to defy and destroy the quiet of God's sky, and mock the laws of His harmony: filthy, stridulous shrieks and squeaks, reaching for miles into the quiet air, from the railroad stations at every gate: and the vociferation, endless, and frantic, of a passing populace whose every word was in mean passion, or in unclean jest. Living in the midst of this, and of vulgar sights more horrible than the sounds, for six months, I found myself —suddenly, as in a dream—walking again alone through the valley of Cluse, unchanged since I knew it first, when I was a boy of fifteen, quite forty years ago;—and in perfect quiet,

and with the priceless completion of quiet, that I was without fear of any outcry or base disturbance of it.

But presently, as I walked, the calm was deepened, instead of interrupted, by a murmur—first low, as of bees, and then rising into distinct harmonious chime of deep bells, ringing in true cadences—but I could not tell where. The cliffs on each side of the valley of Cluse vary from 1,500 to above 2,000 feet in height ; and, without absolutely echoing the chime, they so accepted, prolonged, and diffused it, that at first I thought it came from a village high up and far away among the hills ; then presently it came down to me as if from above the cliff under which I was walking ; then I turned about and stood still, wondering ; for the whole valley was filled with the sweet sound, entirely without local or conceivable origin : and only after some twenty minutes' walk, the depth of tones, gradually increasing, showed me that they came from the tower of Maglans in front of me ; but when I actually got into the village, the cliffs on the other side so took up the ringing, that I again thought for some moments I was wrong.

Perfectly beautiful, all the while, the sound, and exquisitely varied,—from ancient bells of perfect tone and series, rung with decent and joyful art.

“What are the bells ringing so to-day for,—

it is no fête?" I asked of a woman who stood watching at a garden gate.

"For a baptism, sir."

And so I went on, and heard them fading back, and lost among the same bewildering answers of the mountain air.—*Deuc.*, I. v., § 7, 8.

V.

RELIGION.

152. THE STAGES OF FAITH.—No line of modern poetry has been oftener quoted with thoughtless acceptance than Wordsworth's :

“Heaven lies about us in our infancy.”

It is wholly untrue in the implied limitation ; if life be led under heaven's law, the sense of heaven's nearness only deepens with advancing years, and is assured in death. But the saying is indeed true thus far, that in the dawn of virtuous life every enthusiasm and every perception may be trusted as of divine appointment ; and the *maxima reverentia* is due not only to the innocence of children, but to their inspiration.

And it follows that through the ordinary course of mortal failure and misfortune, in the career of nations no less than of men, the error of their intellect, and the hardening of their hearts, may be accurately measured by their denial of spiritual power.

In the life of Scott, beyond comparison the

greatest intellectual force manifested in Europe since Shakespere, the lesson is given us with a clearness as sharp as the incision on a Greek vase. The very first mental effort for which he obtained praise was the passionate recitation of the passage in the "Eneid," in which the ghost of Hector appears to Eneas. And the deadliest sign of his own approaching death is in the form of incredulity which dictated to his weary hand the "Letters on Demonology and Witchcraft."

Here, for the present, I must leave the subject to your own thought,—only desiring you to notice, for general guidance, the gradations of impression on the feelings of men of strong and well-rounded intellect, by which fancy rises towards faith.

I. The lowest stage is that of wilfully grotesque fancy, which is recognised as false, yet dwelt upon with delight and finished with accuracy, as the symbol or parable of what is true.

Shakespere's Puck, and the Dwarf Goblin of the "Lay," are precisely alike in this first level of the imagination. Shakespere does not believe in Bottom's translation; neither does Scott that, when the boy Buccleugh passes the drawbridge, with the dwarf, the sentinel only saw a terrier and lurcher passing out. Yet both of them permit the fallacy, because they acknowledge the Elfin power in nature, to make things, sometimes for good, sometimes for harm, seem what they are not.

Nearly all the grotesque sculpture of the great ages, beginning with the Greek Chimaera, has this nascent form of Faith for its impulse.

II. The ghosts and witches of Shakespere, and the Bodach Glas and White Lady of Scott, are expressions of real belief, more or less hesitating and obscure. Scott's worldliness too early makes him deny his convictions, and in the end effaces them. But Shakespere remains sincerely honest in his assertion of the uncomprehended spiritual presence; with this further subtle expression of his knowledge of mankind, that he never permits a spirit to show itself but to men of the highest intellectual power. To Hamlet, to Brutus, to Macbeth, to Richard III.; but the royal Dane does not haunt his own murderer,—neither does Arthur, King John; neither Norfolk, King Richard II.; nor Tybalt, Romeo.

III. The faith of Horace in the spirit of the fountain of Brundisium, in the Faun of his hill-side, and in the help of the greater gods, is constant, vital, and practical; yet in some degree still tractable by his imagination, as also that of the great poets and painters of Christian times. In Milton, the tractability is singular; he hews his gods out to his own fancy, and then believes in them; but in Giotto and Dante the art is always subjected to the true vision.

IV. The faith of the saints and prophets, rising into serenity of knowledge, "I know that my

Redeemer liveth," is a state of mind of which ordinary men cannot reason ; but which in the practical power of it, has always governed the world, and must for ever. No dynamite will ever be invented that can rule ;—it can but dissolve and destroy. Only the Word of God and the heart of man can govern.—*F. C.*, Letter 92.

153. CHAOS ? OR COSMOS ?—Go out on the seashore when the tide is down, on some flat sand ; and take a little sand up into your palm, and separate one grain of it from the rest. Then try to fancy the relation between that single grain and the number in all the shining fields of the far distant shore, and onward shores immeasurable. Your astronomer tells you, your world is such a grain compared with the worlds that are, but that he can see no inhabitants on them, no sign of habitation, or of beneficence. Terror and chance, cold and fire, light struck forth by collision, desolateness of exploding orb and flying meteor. Meantime—you, on your grain of sand—what are you ? The little grain is itself mostly uninhabitable ; has a damp green belt in the midst of it. In that,—poor small vermin,—you live your span, fighting with each other for food, most of the time ; or building—if perchance you are at peace—filthy nests, in which you perish of starvation, phthisis, diseases, or despair. There is a history of civilisation for you ! briefer than Mr. Buckle's, and

more true—when you see the Heavens and Earth without their God.

It is a fearful sight, and a false one. In what manner or way I neither know nor ask ; this I know, that if a prophet touched your eyes, you might in an instant see all those eternal spaces filled with the heavenly host ; and this also I know, that if you will begin to watch these stars with your human eyes, and learn what noble men have thought of them, and use their light to noble purposes, you will enter into a better joy and better science than ever eye hath seen.—*F. C.*, Letter 75.

154. THE REVELATION OF SPIRIT.—It seems to me, on the whole, that the feelings of the purest and most mightily passioned human souls are likely to be the truest. Not, indeed, if they do not desire to know the truth, or blind themselves to it that they may please themselves with passion ; for then they are no longer pure : but if, continually seeking and accepting the truth as far as it is discernible, they trust their Maker for the integrity of the instincts He has gifted them with, and rest in the sense of a higher truth which they cannot demonstrate, I think they will be most in the right, so.

You may at least earnestly believe, that the presence of the spirit which culminates in your own life, shows itself in dawning, wherever the

dust of the earth begins to assume any orderly and lovely state. You will find it impossible to separate this idea of gradated manifestation from that of the vital power. Things are not either wholly alive, or wholly dead. They are less or more alive. Take the nearest, most easily examined instance—the life of a flower. Notice what a different degree and kind of life there is in the calyx and the corolla. The calyx is nothing but the swaddling clothes of the flower ; the child-blossom is bound up in it, hand and foot ; guarded in it, restrained by it, till the time of birth. The shell is hardly more subordinate to the germ in the egg, than the calyx to the blossom. It bursts at last ; but it never lives as the corolla does. It may fall at the moment its task is fulfilled, as in the poppy ; or wither gradually, as in the buttercup ; or persist in a ligneous apathy, after the flower is dead, as in the rose ; or harmonise itself so as to share in the aspect of the real flower, as in the lily ; but it never shares in the corolla's bright passion of life. And the gradations which thus exist between the different members of organic creatures, exist no less between the different ranges of organism. We know no higher or more energetic life than our own ; but there seems to me this great good in the idea of gradation of life—it admits the idea of a life above us, in other creatures, as much nobler than ours, as ours is nobler than that of the dust.—*Eth. D.*, X.

155. "RELIGION" DEFINED.—You do not say that one man is of one piety, and another of another; but you do, that one man is of one religion, and another of another.

The religion of any man is thus properly to be interpreted, as the feeling which binds him, irrationally, to the fulfilment of duties, or acceptance of beliefs, peculiar to a certain company of which he forms a member, as distinct from the rest of the world. "Which binds him *irrationally*," I say;—by a feeling, at all events, apart from reason, and often superior to it; such as that which brings back the bee to its hive, and the bird to her nest.

A man's religion is the form of mental rest, or dwelling-place, which, partly, his fathers have gained or built for him, and partly, by due reverence to former custom, he has built for himself; consisting of whatever imperfect knowledge may have been granted, up to that time, in the land of his birth, of the Divine character, presence, and dealings; modified by the circumstances of surrounding life.

It may be, that sudden accession of new knowledge may compel him to cast his former idols to the moles and to the bats. But it must be some very miraculous interposition indeed which can justify him in quitting the religion of his forefathers; and, assuredly, it must be an unwise interposition which provokes him to insult it.

On the other hand, the value of religious ceremonial, and the virtue of religious truth, consist in the meek fulfilment of the one as the fond habit of a family ; and the meek acceptance of the other, as the narrow knowledge of a child. And both are destroyed at once, and the ceremonial or doctrinal prejudice becomes only an occasion of sin, if they make us either wise in our own conceit, or violent in our methods of proselytism.—*V. d'A.*, IX., § 229–231.

156. IDOLATRY.—When the populace of Paris adorned the statue of Strasbourg with immortelles, none, even the simplest of the pious decorators, would suppose that the city of Strasbourg itself, or any spirit or ghost of the city, was actually there, sitting in the Place de la Concorde. The figure was delightful to them as a visible nucleus for their fond thoughts about Strasbourg ; but never for a moment supposed to *be* Strasbourg.

Similarly, they might have taken delight in a statue purporting to represent a river instead of a city,—the Rhine, or Garonne, suppose,—and have been touched with strong emotion in looking at it, if the real river were dear to them, and yet never think for an instant that the statue *was* the river.

And yet again, similarly, but much more distinctly, they might take delight in the beautiful

image of a god, because it gathered and perpetuated their thoughts about that god; and yet never suppose, nor be capable of being deceived by any arguments into supposing, that the statue *was* the god.

On the other hand, if a meteoric stone fell from the sky in the sight of a savage, and he picked it up hot, he would most probably lay it aside in some, to him, sacred place, and believe the *stone itself* to be a kind of god, and offer prayer and sacrifice to it.

In like manner, any other strange or terrifying object, such, for instance, as a powerfully noxious animal or plant, he would be apt to regard in the same way; and very possibly also construct for himself frightful idols of some kind, calculated to produce upon him a vague impression of their being alive; whose imaginary anger he might deprecate or avert with sacrifice, although incapable of conceiving in them any one attribute of exalted intellectual or moral nature.—*A. P.*, II., § 44.

157. SERPENT MYTHS.—In the serpent we approach the source of a group of myths, world-wide, founded on great and common human instincts, respecting which I must note one or two points which bear intimately on all our subject. For it seems to me that the scholars who are at present occupied in interpretation of human

myths have most of them forgotten that there are any such things as natural myths ; and that the dark sayings of men may be both difficult to read, and not always worth reading ; but the dark sayings of nature will probably become clearer for the looking into, and will very certainly be worth reading. And, indeed, all guidance to the right sense of the human and variable myths will probably depend on our first getting at the sense of the natural and invariable ones. The dead hieroglyph may have meant this or that—the living hieroglyph means always the same ; but remember, it is just as much hieroglyph as the other ; nay, more,—a “ sacred or reserved sculpture,” a thing with an inner language. The serpent crest of the king’s crown, or of the god’s, on the pillars of Egypt, is a mystery ; but the serpent itself, gliding past the pillar’s foot, is it less a mystery ? Is there, indeed, no tongue, except the mute forked flash from its lips, in that running brook of horror on the ground ?

Why that horror ? We all feel it, yet how imaginative it is, how disproportioned to the real strength of the creature ! There is more poison in an ill-kept drain,—in a pool of dish-washings at a cottage door,—than in the deadliest asp of Nile. Every back-yard which you look down into from the railway, as it carries you out by Vauxhall or Deptford, holds its coiled serpent : all the walls of those ghastly suburbs are enclosures

of tank temples for serpent worship; yet you feel no horror in looking down into them, as you would if you saw the livid scales, and lifted head. There is more venom, mortal, inevitable, in a single word sometimes, or in the gliding entrance of a wordless thought, than ever "*vanti Libia con sua rena.*" But that horror is of the myth, not of the creature. There are myriads lower than this, and more loathsome, in the scale of being: the links between dead matter and animation drift everywhere unseen. But it is the strength of the base element that is so dreadful in the serpent: it is the very omnipotence of the earth. That rivulet of smooth silver—how does it flow, think you? Watch it, when it moves slowly:—A wave, but without wind! a current, but with no fall! all the body moving at the same instant, yet some of it to one side, some to another, or some forward, and the rest of the coil backwards; but all with the same calm will and equal way—no contraction, no extension; one soundless, causeless march of sequent rings, and spectral procession of spotted dust, with dissolution in its fangs, dislocation in its coils. Startle it;—the winding stream will become a twisted arrow;—the wave of poisoned life will lash through the grass like a cast lance. It scarcely breathes with its one lung (the other shrivelled and abortive); it is passive to the sun and shade, and is cold or hot like a stone; yet, "it can outclimb the monkey,

outswim the fish, outleap the zebra, outwrestle the athlete, and crush the tiger."* It is a divine hieroglyph of the demoniac power of the earth,—of the entire earthly nature. As the bird is the clothed power of the air, so this is the clothed power of the dust; as the bird the symbol of the spirit of life, so this of the grasp and sting of death.

Hence the continual change in the interpretation put upon it in various religions. As the worm of corruption, it is the mightiest of all adversaries of the gods—the special adversary of their light and creative power—Python against Apollo. As the power of the earth against the air, the giants are serpent-bodied in the Gigantomachia; but as the power of the earth upon the seed—consuming it into new life (“that which thou sowest is not quickened except it die”)—serpents sustain the chariot of the spirit of agriculture.—*Q. A.*, II., § 67-69.

158. THE SPIRIT OF EVIL.—I leave you to call this deceiving spirit what you like—or to theorise about it as you like. All that I desire you to recognise is the fact of its being here, and the need of its being fought with. If you take the Bible's account of it, or Dante's, or Milton's, you will receive the image of it as a mighty spiritual creature, commanding others, and

* Richard Owen.

resisted by others: if you take Æschylus's or Hesiod's account of it, you will hold it for a partly elementary and unconscious adversity of fate, and partly for a group of monstrous spiritual agencies connected with death, and begotten out of the dust; if you take a modern rationalist's, you will accept it for a mere treachery and want of vitality in our own moral nature exposing it to loathsomeness or moral disease, as the body is capable of mortification or leprosy. I do not care what you call it,—whose history you believe of it,—nor what you yourself can imagine about it; the origin, or nature, or name may be as you will, but the deadly reality of the thing is with us, and warring against us; and on our true war with it depends whatever life we can win. Deadly reality, I say. The puff-adder or horned asp is not more real. Unbelievable,—*those*,—unless you had seen them; no fable could have been coined out of any human brain so dreadful, within its own poor material sphere, as that blue-lipped serpent—working its way sidelong in the sand. As real, but with sting of eternal death—this worm that dies not, and fire that is not quenched, within our souls or around them. Eternal death, I say—sure, that, whatever creed you hold;—if the old Scriptural one, Death of perpetual banishment from before God's face; if the modern rationalist one, Death Eternal for *us*, instant and unredeemable ending of lives wasted in misery.

This is what this unquestionably present—this, according to his power, *omni*-present—fiend, brings us towards, daily. *He* is the person to be “voted” against, my working friend; it is worth something, having a vote against *him*, if you can get it! Which you can, indeed; but not by gift from Cabinet Ministers; you must work warily with your own hands, and drop sweat of heart’s blood, before you can record that vote effectually.—*T. and T.*, X., § 58.

159. THREE STAGES OF NATIONAL RELIGION.—(I.) In their infancy they begin to imitate the real animals about them, as my little girl made the cats and mice,* but with an undercurrent of partial superstition—a sense that there must be more in the creatures than they can see; also they catch up vividly any of the fancies of the baser nations round them, and repeat these more or less apishly, yet rapidly naturalising and beautifying them. They then connect all kinds of shapes together, compounding meanings out of the old chimeras, and inventing new ones with the speed of a running wildfire; but always getting more of man into their images, and admitting less of monster or brute; their own characters, meanwhile, expanding and purging themselves, and shaking off the feverish fancy, as springing flowers shake the earth off their stalks.

[* See § 8 of this volume.]

(II.) In the second stage, being now themselves perfect men and women, they reach the conception of true and great gods as existent in the universe; and absolutely cease to think of them as in any wise present in statues or images; but they have now learned to make these statues beautifully human, and to surround them with attributes that may concentrate their thoughts of the gods. This is, in Greece, accurately the Pindaric time, just a little preceding the Phidian; the Phidian is already dimmed with a faint shadow of infidelity; still, the Olympic Zeus may be taken as a sufficiently central type of a statue which was no more supposed to *be* Zeus, than the gold or elephants' tusks it was made of; but in which the most splendid powers of human art were exhausted in representing a believed and honoured God to the happy and holy imagination of a sincerely religious people.

(III.) The third stage of national existence follows, in which, the imagination having now done its utmost, and being partly restrained by the sanctities of tradition, which permit no farther change in the conceptions previously created, begins to be superseded by logical deduction and scientific investigation. At the same moment, the elder artists having done all that is possible in realising the national conceptions of the gods, the younger ones, forbidden to change the scheme of existing representations, and incapable of doing anything better in that kind, betake themselves

to refine and decorate the old ideas with more attractive skill. Their aims are thus more and more limited to manual dexterity, and their fancy paralysed. Also in the course of centuries, the methods of every art continually improving, and being made subjects of popular inquiry, praise is now to be got, for eminence in these, from the whole mob of the nation; whereas intellectual design can never be discerned but by the few. So that in this third æra we find every kind of imitative and vulgar dexterity more and more cultivated; while design and imagination are every day less cared for, and less possible.

Meanwhile, as I have just said, the leading minds in literature and science become continually more logical and investigative; and once that they are established in the habit of testing facts accurately, a very few years are enough to convince all the strongest thinkers that the old imaginative religion is untenable, and cannot any longer be honestly taught in its fixed traditional form, except by ignorant persons. And at this point the fate of the people absolutely depends on the degree of moral strength into which their hearts have been already trained. If it be a strong, industrious, chaste, and honest race, the taking its old gods, or at least the old forms of them, away from it, will indeed make it deeply sorrowful and amazed; but will in no whit shake its will, nor alter its practice. Exceptional persons, naturally disposed

to become drunkards, harlots, and cheats, but who had been previously restrained from indulging these dispositions by their fear of God, will, of course, break out into open vice, when that fear is removed. But the heads of the families of the people, instructed in the pure habits and perfect delights of an honest life, and to whom the thought of a Father in heaven had been a comfort, not a restraint, will assuredly not seek relief from the discomfort of their orphanage by becoming uncharitable and vile. Also the high leaders of their thought gather their whole strength together in the gloom; and at the first entrance to this Valley of the Shadow of Death, look their new enemy full in the eyeless face of him, and subdue him, and his terror, under their feet. "*Metus omnes, et inexorabile fatum, . . . strepitumque Acherontis avari.*" This is the condition of national soul expressed by the art, and the words, of Holbein, Dürer, Shakespeare, Pope, and Goethe.

But if the people, at the moment when the trial of darkness approaches, be not confirmed in moral character, but are only maintaining a superficial virtue by the aid of a spectral religion; the moment the staff of their faith is broken, the character of the race falls like a climbing plant cut from its hold: then all the earliest vices attack it as it lies in the dust; every form of sensual and insane sin is developed; and half a century is sometimes enough to close in hopeless

shame the career of the nation in literature, art, and war.—*A. P.*, II., § 47–51.

160. NATIONAL WORSHIP.—The Metropolis is properly the city in which the chief temple of the nation's God is built, (cathedral cities being minor branches of the living whole). Thither the tribes go up, and under the shield, and in the loving presence, of their Deity, the men of highest power and truest honour are gathered to frame the laws, and direct the acts, of State.

Modern theologians with proud sense of enlightenment declare, in denial of these ancient imaginations, that God is everywhere. David and Solomon in their days of darkness were not ignorant of this; yet designed and built a local temple to the God who, if they went up into Heaven was there; if they made their bed in Hell, was there also. And if the promise of the One who was greater than the temple be fulfilled, and, where two or three are gathered in His name, there He is in the midst of them, with a more than Universal Presence,—how much more must it be fulfilled where *many* are gathered in His name; and those gathered always; and those the mightiest of the people; and those mightiest to judge its most solemn judgments, and fulfil its fatefullest acts; how surely, I repeat, must their God be always with a more than Universal Presence in the midst of these?

Nor is it difficult to show, not only that the virtue and prosperity of these five great cities* above named has been always dependent on, or at least contemporary with, their unquestioning faith that a protecting Deity had its abode in their Acropolis, their Capitol, and their Cathedral churches of St. Mary, St. Mark, and St. Peter, but that the range of history keeps no record of a city which has retained power after losing such conviction. From that moment its activities become mischievous,—its acquisitions burdensome,—and the multiplied swarms of its inhabitants disgrace the monuments of its majesty, like an ants' nest built in a skull.

Such being the state and sanctity of a city built at unity with itself, and with its God, the state and serenity of the peasant is in undivided peace with it. Withdrawn, either for delight or for labour, from the concerns of policy, he lives under his fig tree and vine; or in pastoral and blossomed land, flowing with milk and honey: confident in the guidance of his household gods, and rejoicing in the love of the Father of all, satisfying him with blessings of the breast and of the womb, and crowning him with fulness of the basket and the store.

All which conditions and beliefs have been, are, and will be to the end of this world, parts and

[* Athens, Rome, Florence, Venice, and London.]

causes of each other. Whatsoever life is in man has arisen from them, consists in them, and prolongs them evermore. So far as these conditions exist, the world lives; so far as they perish, it perishes. By faith, by love, by industry it endures: by infidelity, by hatred, and by idleness it dies; and that daily: now around us, visibly, for the most part, lying in such dismal death; the temple of the city being changed into a den of thieves, and the fields of the country into a labouring ground of slaves.—*Economist of Xenophon*, Pref.

161. THE GARDEN OF GOD.—We continually think of that Garden of Delight, as if it existed, or could exist, no longer; wholly forgetting that it is spoken of in Scripture as perpetually existent; and some of its fairest trees as existent also, or only recently destroyed. When Ezekiel is describing to Pharaoh the greatness of the Assyrians, do you remember what image he gives of them? "Behold, the Assyrian was a cedar in Lebanon, with fair branches; and his top was among the thick boughs; the waters nourished him, and the deep brought him up, with her rivers running round about his plants. Under his branches did all the beasts of the field bring forth their young; and under his shadow dwelt all great nations."

Now hear what follows. "The cedars in the *Garden of God* could not hide *him*. The fir trees

were not like his boughs, and the chestnut trees were not like his branches; nor any tree in 'the Garden of God was like unto him in beauty."

So that you see, whenever a nation rises into consistent, vital, and, through many generations, enduring power, *there* is still the Garden of God; still it is the water of life which feeds the roots of it; and still the succession of its people is imaged by the perennial leafage of trees of Paradise. Could this be said of Assyria, and shall it not be said of England? How much more, of lives such as ours should be,—just, laborious, united in aim, beneficent in fulfilment, may the image be used of the leaves of the trees of Eden! Other symbols have been given often to show the evanescence and slightness of our lives,—the foam upon the water, the grass on the housetop, the vapour that vanishes away; yet none of these are images of true human life. That life, when it is real, is *not* evanescent; is *not* slight; does *not* vanish away. Every noble life leaves the fibre of it interwoven for ever in the work of the world; by so much, evermore, the strength of the human race has gained; more stubborn in the root, higher towards heaven in the branch; and, "as a tei tree, and as an oak,—whose substance is in them when they cast their leaves—so the holy seed is in the midst thereof."

Only remember on what conditions. In the great Psalm of life, we are told that everything

that a man doeth shall prosper, so only that he delight in the law of his God, that he hath not walked in the counsel of the wicked, nor sat in the seat of the scornful. Is it among these leaves of the perpetual Spring,—helpful leaves for the healing of the nations,—that we mean to have our part and place, or rather among the “brown skeletons of leaves that lag, the forest brook along?” For other leaves there are, and other streams that water them,—not water of life, but water of Acheron. Autumnal leaves there are that strew the brooks, in Vallombrosa. Remember you how the name of the place was changed: “Once called ‘Sweet Water’ (Aqua bella), now, the Shadowy Vale.” Portion in one or other name we must choose, all of us,—with the living olive, by the living fountains of waters, or with the wild fig trees, whose leafage of human soul is strewed along the brooks of death, in the eternal Vallombrosa.—*Proserpina*, I. III., § 30–32.

162. ON THE STUDY OF MYTHOLOGY.—In all the most beautiful and enduring myths, we shall find, not only a literal story of a real person,—not only a parallel imagery of moral principle,—but an underlying worship of natural phenomena, out of which both have sprung, and in which both for ever remain rooted. Thus, from the real sun, rising and setting;—from the real atmosphere, calm in its dominion of unfading blue, and fierce

in its descent of tempest,—the Greek forms first the idea of two entirely personal and corporeal gods, whose limbs are clothed in divine flesh, and whose brows are crowned with divine beauty; yet so real that the quiver rattles at their shoulder, and the chariot bends beneath their weight. And on the other hand, collaterally with these corporeal images, and never for one instant separated from them, he conceives also two omnipresent spiritual influences, of which one illuminates, as the sun, with a constant fire, whatever in humanity is skilful and wise; and the other, like the living air, breathes the calm of heavenly fortitude, and strength of righteous anger, into every human breast that is pure and brave.

Now, therefore, in nearly every myth of importance, you have to discern these three structural parts—the root and the two branches:—the root, in physical existence, sun, or sky, or cloud, or sea; then the personal incarnation of that; becoming a trusted and companionable deity, with whom you may walk hand in hand, as a child with its brother or its sister; and, lastly, the moral significance of the image, which is in all the great myths eternally and beneficently true.

The great myths; that is to say, myths made by great people. For the first plain fact about myth-making is one which has been most strangely lost sight of,—that you cannot make a myth

unless you have something to make it of. You cannot tell a secret which you don't know. If the myth is about the sky, it must have been made by somebody who had looked at the sky. If the myth is about justice and fortitude, it must have been made by some one who knew what it was to be just or patient. According to the quantity of understanding in the person will be the quantity of significance in his fable; and the myth of a simple and ignorant race must necessarily mean little, because a simple and ignorant race have little to mean. So the great question in reading a story is always, not what wild hunter dreamed, or what childish race first dreaded it; but what wise man first perfectly told, and what strong people first perfectly lived by it. And the real meaning of any myth is that which it has at the noblest age of the nation among whom it is current. The farther back you pierce, the less significance you will find, until you come to the first narrow thought, which, indeed, contains the germ of the accomplished tradition; but only as the seed contains the flower. As the intelligence and passion of the race develop, they cling to and nourish their beloved and sacred legend; leaf by leaf, it expands, under the touch of more pure affections, and more delicate imagination, until at last the perfect fable burgeons out into symmetry of milky stem, and honeyed bell.

But through whatever changes it may pass,

remember that our right reading of it is wholly dependent on the materials we have in our own minds for an intelligent answering sympathy. If it first arose among a people who dwelt under stainless skies, and measured their journeys by ascending and declining stars, we certainly cannot read their story, if we have never seen anything above us in the day, but smoke; nor anything round us in the night but candles. If the tale goes on to change clouds or planets into living creatures,—to invest them with fair forms—and inflame them with mighty passions, we can only understand the story of the human-hearted things, in so far as we ourselves take pleasure in the perfectness of visible form, or can sympathise, by an effort of imagination, with the strange people who had other loves than that of wealth, and other interests than those of commerce. And, lastly, if the myth complete itself to the fulfilled thoughts of the nation, by attributing to the gods, whom they have carved out of their fantasy, continual presence with their own souls; and their every effort for good is finally guided by the sense of the companionship, the praise, and the pure will of Immortals, we shall be able to follow them into this last circle of their faith only in the degree in which the better parts of our own beings have been also stirred by the aspects of Nature, or strengthened by her laws.—*Q. A.*, I., § 5–8.

163. HEATHEN PIETY. — We cannot justly interpret the religion of any people, unless we are prepared to admit that we ourselves, as well as they, are liable to error in matters of faith; and that the convictions of others, however singular, may in some points have been well founded, while our own, however reasonable, may in some particulars be mistaken. You must forgive me, therefore, for not always distinctively calling the creeds of the past, "superstition," and the creeds of the present day, "religion;" as well as for assuming that a faith now confessed may sometimes be superficial, and that a faith long forgotten may once have been sincere. It is the task of the Divine to condemn the errors of antiquity, and of the Philologist to account for them: I will only pray you to read, with patience and human sympathy, the thoughts of men who lived without blame in a darkness they could not dispel; and to remember that, whatever charge of folly may justly attach to the saying,—"There is no God," the folly is prouder, deeper, and less pardonable, in saying, "There is no God but for me."—*Q. A.*, I., § I.

164. GREEK RELIGION.—The Greek creed was, of course, different in its character, as our own creed is, according to the class of persons who held it. The common people's was quite literal, simple, and happy: their idea of Athena

was as clear as a good Roman Catholic peasant's idea of the Madonna. In Athens itself, the centre of thought and refinement, Pisistratus obtained the reins of government through the ready belief of the populace that a beautiful woman, armed like Athena, was the goddess herself. Even at the close of the last century some of this simplicity remained among the inhabitants of the Greek islands; and when a pretty English lady first made her way into the grotto of Antiparos, she was surrounded, on her return, by all the women of the neighbouring village, believing her to be divine, and praying her to heal them of their sicknesses.

Then, secondly, the creed of the upper classes was more refined and spiritual, but quite as honest, and even more forcible in its effect on the life. You might imagine that the employment of the artifice just referred to implied utter unbelief in the persons contriving it; but it really meant only that the more worldly of them would play with a popular faith for their own purposes, as doubly-minded persons have often done since, all the while sincerely holding the same ideas themselves in a more abstract form; while the good and unworldly men, the true Greek heroes, lived by their faith as firmly as St. Louis, or the Cid, or the Chevalier Bayard.

Then, thirdly, the faith of the poets and artists was, necessarily, less definite, being continually

modified by the involuntary action of their own fancies; and by the necessity of presenting, in clear verbal or material form, things of which they had no authoritative knowledge. Their faith was, in some respects, like Dante's or Milton's: firm in general conception, but not able to vouch for every detail in the forms they gave it: but they went considerably farther, even in that minor sincerity, than subsequent poets; and strove with all their might to be as near the truth as they could. Pindar says, quite simply, "I cannot think so-and-so of the Gods. It must have been this way—it cannot have been that way—that the thing was done." And as late among the Latins as the days of Horace, this sincerity remains. Horace is just as true and simple in his religion as Wordsworth; but all power of understanding any of the honest classic poets has been taken away from most English gentlemen by the mechanical drill in verse-writing at school. Throughout the whole of their lives afterwards, they never can get themselves quit of the notion that all verses were written as an exercise, and that Minerva was only a convenient word for the last of an hexameter, and Jupiter for the last but one.

It is impossible that any notion can be more fallacious or more misleading in its consequences. All great song, from the first day when human lips contrived syllables, has been sincere song. With deliberate didactic purpose the tragedians

—with pure and native passion the lyrists—fitted their perfect words to their dearest faiths. “*Operosa parvus carmina fingo.*” “I, little thing that I am, weave my laborious songs,” as earnestly as the bee among the bells of thyme on the *Matin* mountains. Yes, and he dedicates his favourite pine to *Diana*, and he chants his autumnal hymn to *Faunus* guarding his fields, and he guides the noble youths and maids of *Rome* in their choir to *Apollo*, and he tells the farmer’s little girl that the Gods will love her, though she has only a handful of salt and meal to give them—just as earnestly as ever English gentlemen taught Christian faith to English youth, in England’s truest days.

Then, lastly, the creed of the philosophers or sages varied according to the character and knowledge of each;—their relative acquaintance with the secrets of natural science—their intellectual and sectarian egotism—and their mystic or monastic tendencies, for there is a classic as well as a mediæval monasticism. They ended in losing the life of Greece in play upon words; but we owe to their early thought some of the soundest ethics, and the foundation of the best practical laws, yet known to mankind.—*Q. A.*, I., § 45–49.

165. THE GODDESS OF *ATHENS*.—The religious passion is nearly always vividest when the art is weakest; and the technical skill reaches its

deliberate splendour only when the ecstasy which gave it birth has passed away for ever. It is as vain an attempt to reason out the visionary power or guiding influence of Athena in the Greek heart, from anything we now read, or possess, of the work of Phidias, as it would be for the disciples of some new religion to infer the spirit of Christianity from Titian's "Assumption." The effective vitality of the religious conception can be traced only through the efforts of trembling hands, and strange pleasures of untaught eyes ; and the beauty of the dream can no more be found in the first symbols by which it is expressed, than a child's idea of fairyland can be gathered from its pencil scrawl, or a girl's love for her broken doll explained by the defaced features. On the other hand, the Athena of Phidias was, in very fact, not so much the deity, as the darling of the Athenian people. Her magnificence represented their pride and fondness, more than their piety ; and the great artist, in lavishing upon her dignities which might be ended abruptly by the pillage they provoked, resigned, apparently without regret, the awe of her ancient memory ; and, (with only the careless remonstrance of a workman too strong to be proud), even the perfectness of his own art. Rejoicing in the protection of their goddess, and in their own hour of glory, the people of Athena robed her, at their will, with the preciousness of ivory and gems ; forgot or denied the darkness of

the breastplate of judgment, and vainly bade its unappeasable serpents relax their coils in gold.

It will take me many a day yet—if days, many or few, be given me—to disentangle in anywise the proud and practised disguises of religious creeds from the instinctive arts which, grotesquely and indecorously, yet with sincerity, strove to embody them, or to relate. But I think the reader, by help even of the imperfect indications already given to him, will be able to follow, with a continually increasing security, the vestiges of the Myth of Athena; and to reanimate its almost evanescent shade, by connecting it with the now recognised facts of existent nature, which it, more or less dimly, reflected and foretold. I gather these facts together in brief sum.

The deep of air that surrounds the earth enters into union with the earth at its surface, and with its waters; so as to be the apparent cause of their ascending into life. First, it warms them, and shades, at once, staying the heat of the sun's rays in its own body, but warding their force with its clouds. It warms and cools at once, with traffic of balm and frost; so that the white wreaths are withdrawn from the field of the Swiss peasant by the glow of Libyan rock. It gives its own strength to the sea; forms and fills every cell of its foam; sustains the precipices, and designs the valleys of its waves; gives the gleam to their moving under the night, and the white fire to their plains under

sunrise ; lifts their voices along the rocks, bears above them the spray of birds, pencils through them the dimpling of unfooted sands. It gathers out of them a portion in the hollow of its hand : dyes, with that, the hills into dark blue, and their glaciers with dying rose ; inlays with that, for sapphire, the dome in which it has to set the cloud ; shapes out of that the heavenly flocks : divides them, numbers, cherishes, bears them on its bosom, calls them to their journeys, waits by their rest ; feeds from them the brooks that cease not, and strews with them the dews that cease. It spins and weaves their fleece into wild tapestry, rends it, and renews ; and flits and flames, and whispers, among the golden threads, thrilling them with a plectrum of strange fire that traverses them to and fro, and is enclosed in them like life.

It enters into the surface of the earth, subdues it, and falls together with it into fruitful dust, from which can be moulded flesh ; it joins itself, in dew, to the substance of adamant ; and becomes the green leaf out of the dry ground ; it enters into the separated shapes of the earth it has tempered, commands the ebb and flow of the current of their life, fills their limbs with its own lightness, measures their existence by its indwelling pulse, moulds upon their lips the words by which one soul can be known to another ; is to them the hearing of the ear, and the beating of the heart ;

and, passing away, leaves them to the peace that hears and moves no more.

This was the Athena of the greatest people of the days of old. And opposite to the temple of this Spirit of the breath, and life-blood, of man and of beast, stood, on the Mount of Justice, and near the chasm which was haunted by the goddess-Avengers, an altar to a God unknown;—proclaimed at last to them, as one who, indeed, gave to all men, life, and breath, and all things; and rain from heaven, filling their hearts with food and gladness;—a God who had made of one blood all nations of men who dwell on the face of all the earth, and had determined the times of their fate, and the bounds of their habitation.

We ourselves, fretted here in our narrow days, know less, perhaps, in very deed, than they, what manner of spirit we are of, or what manner of spirit we ignorantly worship. Have we, indeed, desired the Desire of all nations? and will the Master whom we meant to seek, and the Messenger in whom we thought we delighted, confirm, when He comes to His temple,—or not find in its midst,—the tables heavy with gold for bread, and the seats that are bought with the price of the dove? Or is our own land also to be left by its angered Spirit;—left among those, where sunshine vainly sweet, and passionate folly of storm, waste themselves in the silent places of knowledge that

has passed away, and of tongues that have ceased ?

This only we may discern assuredly : this, every true light of science, every mercifully-granted power, every wisely-restricted thought, teach us more clearly day by day, that in the heavens above, and the earth beneath, there is one continual and omnipotent presence of help, and of peace, for all men who know that they Live, and remember that they Die.—*Q. A.*, II., § 96–100.

166. CHRISTIAN MYTHOLOGY.—In giving a history of the mental constitution of nascent Christianity, we have to deal with, and carefully to distinguish, two entirely different orders in its accepted hierarchy :—one, scarcely founded at all on personal characters or acts, but mythic or symbolic ; often merely the revival, the baptized resuscitation of a Pagan deity, or the personified omnipresence of a Christian virtue ;—the other, a senate of *Patres Conscripti* of real persons, great in genius, and perfect, humanly speaking, in holiness ; who by their personal force and inspired wisdom, wrought the plastic body of the Church into such noble form as in each of their epochs it was able to receive ; and on the right understanding of whose lives, nor less of the affectionate traditions which magnified and illumined their memories, must absolutely depend the value of every estimate we form, whether of the nature of

the Christian Church herself, or of the directness of spiritual agency by which she was guided.*

An important distinction, therefore, is to be noted at the outset, in the objects of this Apotheosis, according as they are, or are not, real persons.

Of these two great orders of Saints, the first, or mythic, belongs—speaking broadly—to the southern or Greek Church alone.

The Gothic Christians, once detached from the worship of Odin and Thor, abjure from their hearts all trust in the elements, and all worship of ideas. They will have their Saints in flesh and blood, their Angels in plume and armour; and nothing incorporeal or invisible. In all the Religious sculpture beside Loire and Seine, you will not find either of the great rivers personified; the dress of the highest seraph is of true steel or sound broadcloth, neither flecked by hail, nor fringed by thunder; and while the ideal Charity of Giotto at Padua presents her heart in her hand to God, and tramples at the same instant on bags of gold, the treasures of the world, and gives only corn and flowers; that on the west porch of Amiens is content to clothe a beggar with a piece of the staple manufacture of the town.

* If the reader believes in no spiritual agency, still his understanding of the first letters in the Alphabet of History depends on his comprehending rightly the tempers of the people who *did*.

On the contrary, it is nearly impossible to find in the imagery of the Greek Church, under the former exercise of the Imagination, a representation either of man or beast which purports to represent *only* the person, or the brute. Every mortal creature stands for an Immortal Intelligence or Influence: a Lamb means an Apostle, a Lion an Evangelist, an Angel the Eternal justice or benevolence; and the most historical and indubitable of Saints are compelled to set forth, in their vulgarly apparent persons, a Platonic myth or an Athanasian article.

I therefore take note first of the mythic saints in succession, whom this treatment of them by the Byzantine Church made afterwards the favourite idols of all Christendom.

I. The most mythic is of course St. Sophia; the shade of the Greek Athena, passing into the "Wisdom" of the Jewish Proverbs and Psalms, and the Apocryphal "Wisdom of Solomon." She always remains understood as a personification only; and has no direct influence on the mind of the unlearned multitude of Western Christendom, except as a godmother,—in which kindly function she is more and more accepted as times go on; her healthy influence being perhaps greater over sweet vicars' daughters in Wakefield—when Wakefield *was*,—than over the prudentest of the rarely prudent Empresses of Byzantium.

II. Of St. Catharine of Egypt there are vestiges of personal tradition which may perhaps permit the supposition of her having really once existed, as a very lovely, witty, proud, and "fanciful" girl. She afterwards becomes the Christian type of the Bride, in the "Song of Solomon," involved with an ideal of all that is purest in the life of a nun, and brightest in the death of a martyr. It is scarcely possible to overrate the influence of the conceptions formed of her, in ennobling the sentiments of Christian women of the higher orders; to their practical common sense, as the mistresses of a household or a nation, her example may have been less conducive.

III. St. Barbara, also an Egyptian, and St. Catharine's contemporary, though the most practical of the mythic saints, is also, after St. Sophia, the least corporeal: she vanishes far away into the "Inclusa Danae," and her "Turris aenea" becomes a myth of Christian safety, of which the Scriptural significance may be enough felt by merely looking out the texts under the word "Tower," in your concordance; and whose effectual power, in the fortitudes alike of matter and spirit, was in all probability made impressive enough to all Christendom, both by the fortifications and persecutions of Diocletian. I have endeavoured to mark her general relations to St. Sophia in the little imaginary dialogue between

them given in the eighth lecture of the "Ethics of the Dust." *

Afterwards, as Gothic architecture becomes dominant, and at last beyond question the most wonderful of all temple-building, St. Barbara's Tower is, of course, its perfected symbol and utmost achievement ; and whether in the coronets of countless battlements worn on the brows of the noblest cities, or in the Lombard bell-tower on the mountains, and the English spire on Sarum plain, the geometric majesty of the Egyptian maid became glorious in harmony of defence, and sacred with precision of symbol.

As the buildings which showed her utmost skill were chiefly exposed to lightning, she is invoked in defence from it ; and our petition in the Litany, against sudden death, was written originally to her. The blasphemous corruptions of her into a patroness of cannon and gunpowder, are among the most ludicrous (because precisely contrary to the original tradition), as well as the most deadly, insolences and stupidities of Renaissance Art.

IV. St. Margaret of Antioch was a shepherdess ; the St. Geneviève of the East ; the type of feminine gentleness and simplicity. Traditions of the resurrection of Alcestis perhaps mingle in those of her contest with the dragon ; but at all events,

* [Where the Spirit of Wisdom is represented in her Egyptian form as "Neith." See § 20 of this volume.]

she differs from the other three great mythic saints, in expressing the soul's victory over temptation or affliction, by Christ's miraculous help, and without any special power of its own. She is the saint of the meek and of the poor; her virtue and her victory are those of all gracious and lowly womanhood; and her memory is consecrated among the gentle households of Europe; no other name, except those of Jeanne and Jeanie, seems so gifted with a baptismal fairy power of giving grace and peace.

I must be forgiven for thinking, even on this canonical ground, not only of Jeanie Deans, and Margaret of Branksome; but of Meg—Merrilies. My readers will, I fear, choose rather to think of the more doubtful victory over the Dragon, won by the great Margaret of German literature.

V. With much more clearness and historic comfort we may approach the shrine of St. Cecilia; and even on the most prosaic and realistic minds—such as my own—a visit to her house in Rome has a comforting and establishing effect, which reminds one of the carter in "Harry and Lucy," who is convinced of the truth of a plaustral catastrophe at first incredible to him, as soon as he hears the name of the hill on which it happened. The ruling conception of her is deepened gradually by the enlarged study of Religious music; and is at its best and highest in the thirteenth century, when she rather resists

than complies with the already tempting and distracting powers of sound; and we are told that "*cantantibus organis, Cecilia virgo in corde suo soli Domino decantabat, dicens, 'Fiat, Domine, cor meum et corpus meum immaculatum, ut non confundar.'*"

("While the instruments played, Cecilia the virgin sang in her heart only to the Lord, saying, O Lord, be my heart and body made stainless, that I be not confounded.")

This sentence occurs in my great Service-book of the convent of Beau-pré, written in 1290, and it is illustrated with a miniature of Cecilia sitting silent at a banquet, where all manner of musicians are playing. I need not point out to you how the law, not of sacred music only, so called, but of *all* music, is determined by this sentence; which means in effect that unless music exalt and purify, it is not under St. Cecilia's ordinance, and it is not, virtually, music at all.

Her confessed power at last expires amidst a hubbub of odes and sonatas; and I suppose her presence at a Morning Popular is as little anticipated as desired. Unconfessed, she is of all the mythic saints for ever the greatest; and the child in its nurse's arms, and every tender and gentle spirit which resolves to purify in itself,—as the eye for seeing, so the ear for hearing,—may still, whether behind the Temple veil, or at the fireside, and by the wayside, hear Cecilia sing. . . .

Such was the system of Theology into which the Imaginative Religion of Europe was crystallised, by the growth of its own best faculties, and the influence of all accessible and credible authorities, during the period between the eleventh and fifteenth centuries inclusive. Its spiritual power is completely represented by the angelic and apostolic dynasties, and the women-saints in Paradise; for of the men-saints, beneath the apostles and prophets, none but St. Christopher, St. Nicholas, St. Anthony, St. James, and St. George, attained anything like the influence of Catharine or Cecilia; for the very curious reason, that the men-saints were much more true, real, and numerous. St. Martin was revered all over Europe, but definitely, as a man, and the Bishop of Tours. So St. Ambrose at Milan, and St. Gregory at Rome, and hundreds of good men more, all over the world; while the really good women remained, though not rare, inconspicuous. The virtues of French Clotilde, and Swiss Berthe, were painfully borne down in the balance of visible judgment, by the guilt of the Gonerils, Regans, and Lady Macbeths, whose spectral procession closes only with the figure of Eleanor in Woodstock maze; and in dearth of nearer objects, the daily brighter powers of fancy dwelt with more concentrated devotion on the stainless ideals of the earlier maid-martyrs. And observe, even the loftier fame of the men-saints above named,

as compared with the rest, depends on precisely the same character of indefinite personality ; and on the representation, by each of them, of a moral idea which may be embodied and painted in a miraculous legend ; credible, as history, even then, only to the vulgar ; but powerful over them, nevertheless, exactly in proportion to the degree in which it can be pictured and fancied as a living creature. Consider even yet in these days of mechanism, how the dullest John Bull cannot with perfect complacency adore *himself*, except under the figure of Britannia or the British Lion ; and how the existence of the popular jest-book, which might have seemed secure in its necessity to our weekly recreation, is yet virtually centred on the imaginary animation of a puppet, and the imaginary elevation to reason of a dog. But in the Middle Ages, this action of the Fancy, now distorted and despised, was the happy and sacred tutress of every faculty of the body and soul ; and the works and thoughts of art, the joys and toils of men, rose and flowed on in the bright air of it, with the aspiration of a flame, and the beneficence of a fountain.—*Pleasures of England*, IV.

167. ST. MARTIN OF TOURS.—If from beneath the apse of Amiens Cathedral we take the street leading due south, leaving the railroad station on the left, it brings us to the foot of a gradually

ascending hill, some half a mile long—a pleasant and quiet walk enough, terminating on the level of the highest land near Amiens; whence, looking back, the Cathedral is seen beneath us, all but the flèche, our gained hill-top being on a level with its roof-ridge: and, to the south, the plain of France.

Somewhere about this spot, or in the line between it and St. Acheul, stood the ancient Roman gate of the Twins, whereon were carved Romulus and Remus being suckled by the wolf; and out of which, one bitter winter's day—a hundred and seventy years ago when Clovis was baptized—had ridden a Roman soldier, wrapped in his horseman's cloak, on the causeway which was part of the great Roman road from Lyons to Boulogne.

And it is well worth your while also, some frosty autumn or winter day when the east wind is high, to feel the sweep of it at this spot, remembering what chanced here, memorable to all men, and serviceable, in that winter of the year 332, when men were dying for cold in Amiens streets:—namely, that the Roman horseman, scarce gone out of the city gate, was met by a naked beggar, shivering with cold; and that, seeing no other way of shelter for him, he drew his sword, divided his own cloak in two, and gave him half of it.

No ruinous gift, nor even enthusiastically generous: Sydney's cup of cold water needed more

self-denial; and I am well assured that many a Christian child of our day, himself well warmed and clad, meeting one naked and cold, would be ready enough to give the *whole* cloak off his own shoulders to the necessitous one, if his better-advised nurse, or mamma, would let him. But this Roman soldier was no Christian, and did his serene charity in simplicity, yet with prudence.

Nevertheless, that same night, he beheld in a dream the Lord Jesus, who stood before him in the midst of angels, having on His shoulders the half of the cloak he had bestowed on the beggar.

And Jesus said to the angels that were around him, "Know ye who hath thus arrayed me? My servant Martin, though yet unbaptized, has done this." And Martin after this vision hastened to receive baptism, being then in his twenty-third year.

Whether these things ever were so, or how far so, credulous or incredulous reader, is no business whatever of yours or mine. What is, and shall be, everlastingly, *so*,—namely, the infallible truth of the lesson herein taught, and the actual effect of the life of St. Martin on the mind of Christendom,—is, very absolutely, the business of every rational being in any Christian realm.

You are to understand, then, first of all, that the especial character of St. Martin is a serene and meek charity to all creatures. He is not a

preaching saint—still less a persecuting one: not even an anxious one. Of his prayers we hear little—of his wishes, nothing. What he does always, is merely the right thing at the right moment;—rightness and kindness being in his mind one: an extremely exemplary saint, to my notion.

Converted and baptized—and conscious of having seen Christ—he nevertheless gives his officers no trouble whatever—does not try to make proselytes in his cohort. “It is Christ’s business, surely!—if He wants them, He may appear to them as He has to me,” seems the feeling of his first baptized days. He remains seventeen years in the army, on those tranquil terms.

At the end of that time, thinking it might be well to take other service, he asks for his dismissal from the Emperor Julian,—who accusing him of faintheartedness, Martin offers, unarmed, to lead his cohort into battle, bearing only the sign of the cross. Julian takes him at his word,—keeps him in ward till time of battle comes; but, the day before he counts on putting him to that war ordeal, the barbarian enemy sends embassy with irrefusable offers of submission and peace.

The story is not often dwelt upon: how far literally true, again observe, does not in the least matter;—here *is* the lesson for ever given of the way in which a Christian soldier should meet his

enemies. Which had John Bunyan's Mr. Great-heart understood, the Celestial gates had opened by this time to many a pilgrim who has failed to hew his path up to them with the sword of sharpness.

But true in some practical and effectual way the story *is*; for after a while, without any oratorising, anathematising, or any manner of disturbance, we find the Roman Knight made Bishop of Tours, and becoming an influence of unmixed good to all mankind, then, and afterwards. And virtually the same story is repeated of his bishop's robe as of his knight's cloak—not to be rejected because so probable an invention; for it is just as probable an act. . . .

But one more legend,—and we have enough to show us the roots of this saint's strange and universal power over Christendom.

“What peculiarly distinguished St. Martin was his sweet, serious, unfailing serenity; no one had ever seen him angry, or sad, or gay; there was nothing in his heart but piety to God and pity for men. The Devil, who was particularly envious of his virtues, detested above all his exceeding charity, because it was the most inimical to his own power, and one day reproached him mockingly that he so soon received into favour the fallen and the repentant. But St. Martin answered him sorrowfully, saying, ‘Oh most miserable that thou art! if *thou* also couldst cease to persecute and seduce wretched men, if thou also couldst repent,

thou also shouldst find mercy and forgiveness through Jesus Christ.' " *

In this gentleness was his strength; and the issue of it is best to be estimated by comparing its scope with that of the work of St. Firmin. The impatient missionary riots and rants about Amiens' streets—insults, exhorts, persuades, baptizes,—turns everything, as aforesaid, upside down for forty days : then gets his head cut off, and is never more named, *out* of Amiens. St. Martin teases nobody, spends not a breath in unpleasant exhortation, understands, by Christ's first lesson to himself, that undipped people may be as good as dipped if their hearts are clean; helps, forgives, and cheers, (companionable even to the loving-cup), as readily the clown as the king; he is the patron of honest drinking; the stuffing of your Martinmas goose is fragrant in his nostrils, and sacred to him the last kindly rays of departing summer. And somehow—the idols totter before him far and near—the Pagan gods fade, *his* Christ becomes all men's Christ—his name is named over new shrines innumerable in all lands; high on the Roman hills, lowly in English fields;—St. Augustine baptized his first English converts in St. Martin's church at Canterbury; and the Charing Cross station itself has not yet effaced wholly from London minds his memory or his name. . . .

* Mrs. Jameson, *Legendary Art*, Vol. II., p. 722.

As gathering years told upon him, he seems to have felt that he had carried weight of crosier long enough—that busy Tours must now find a busier Bishop—that, for himself, he might innocently henceforward take his pleasure and his rest where the vine grew and the lark sang. For his episcopal palace, he takes a little cave in the chalk cliffs of the up-country river: arranges all matters therein, for bed and board, at small cost. Night by night the stream murmurs to him, day by day the vine-leaves give their shade; and, daily by the horizon's breadth so much nearer Heaven, the fore-running sun goes down for him beyond the glowing water;—there, where now the peasant woman trots homewards between her panniers, and the saw rests in the half-cleft wood, and the village spire rises gray against the farthest light, in Turner's "Loire-side."—*Bible of Amiens*, I.

168. THE ANCHORITES.—No man has any data for estimating, far less right of judging, the results of a life of resolute self-denial, until he has had the courage to try it himself, at least for a time: but I believe no reasonable person will wish, and no honest person dare, to deny the benefits he has occasionally felt both in mind and body, during periods of accidental privation from luxury, or exposure to danger. The extreme vanity of the modern Englishman in making a momentary Stylites of himself on the top of a

Horn or an Aiguille, and his occasional confession of a charm in the solitude of the rocks, of which he modifies nevertheless the poignancy with his pocket newspaper, and from the prolongation of which he thankfully escapes to the nearest table-d'hôte, ought to make us less scornful of the pride, and more intelligent of the passion, in which the mountain anchorites of Arabia and Palestine condemned themselves to lives of seclusion and suffering, which were comforted only by supernatural vision, or celestial hope. That phases of mental disease are the necessary consequence of exaggerated and independent emotion of any kind must, of course, be remembered in reading the legends of the wilderness; but neither physicians nor moralists have yet attempted to distinguish the morbid states of intellect which are extremities of noble passion, from those which are the punishments of ambition, avarice, or lasciviousness.

Setting all questions of this nature aside for the moment, my younger readers need only hold the broad fact that during the whole of the fourth century, multitudes of self-devoted men led lives of extreme misery and poverty in the effort to obtain some closer knowledge of the Being and Will of God. We know, in any available clearness, neither what they suffered, nor what they learned. We cannot estimate the solemnising or reproofing power of their examples on the less zealous Christian world; and only God knows how far

their prayers for it were heard, or their persons accepted. This only we may observe with reverence, that among all their numbers, none seem to have repented their chosen manner of existence; none perish by melancholy or suicide; their self-adjudged sufferings are never inflicted in the hope of shortening the lives they embitter or purify; and the hours of dream or meditation, on mountain or in cave, appear seldom to have dragged so heavily as those which, without either vision or reflection, we pass ourselves, on the embankment and in the tunnel.—*Bible of Amiens*, III.

169. THE CARTHIUSIANS.—But the more I loved or envied the monks, and the more I despised the modern commercial and fashionable barbaric tribes, the more acutely also I felt that the Catholic political hierarchies, and isolated remnants of celestial enthusiasm, were hopelessly at fault in their dealing with these adversaries; having also elements of corruption in themselves, which justly brought on them the fierce hostility of men like Garibaldi in Italy, and of the honest and open-hearted liberal leaders in other countries. Thus, irrespectively of all immediate contest or progress, I saw in the steady course of the historical reading by which I prepared myself to write the Stones of Venice, that, alike in the world and the Church, the hearts of men were led astray by the same dreams and desires; and whether in

seeking for Divine perfection, or earthly pleasure, were alike disobeying the laws of God when they withdrew from their direct and familiar duties, and ceased, whether in ascetic or self-indulgent lives, to honour and love their neighbour as themselves.

While these convictions prevented me from being ever led into acceptance of Catholic teaching by my reverence for the Catholic art of the great ages,—and the less, because the Catholic art of these small ages can say but little for itself,—I grew also daily more sure that the peace of God rested on all the dutiful and kindly hearts of the laborious poor; and that the only constant form of pure religion was in useful work, faithful love, and stintless charity.

In which pure religion neither St. Bruno himself nor any of his true disciples failed: and I perceive it finally notable of them, that, poor by resolute choice of a life of hardship, without any sentimental or fallacious glorifying of “Holy poverty” as if God had never promised full garners for a blessing; and always choosing men of high intellectual power for the heads of their community, they have had more directly wholesome influence on the outer world than any other order of monks so narrow in number, and restricted in habitation. For while the Franciscan and Cistercian monks became everywhere a constant element in European society, the Carthusians, in their active sincerity, remained, in groups of not

more than from twelve to twenty monks in any single monastery, the tenants of a few wild valleys of the north-western Alps; the subsequent overflowing of their brotherhood into the Certosas of the Lombard plains being mere waste and wreck of them; and the great Certosa of Pavia one of the worst shames of Italy, associated with the accursed reign of Galeazzo Visconti. But in their strength, from the foundation of the order, at the close of the eleventh century, to the beginning of the fourteenth, they reared in their mountain fastnesses, and sent out to minister to the world, a succession of men of immense mental grasp, and serenely authoritative innocence; among whom our own Hugo of Lincoln, in his relations with Henry I. and Cœur de Lion, is to my mind the most beautiful sacerdotal figure known to me in history. The great Pontiffs have a power which in its strength can scarcely be used without cruelty, nor in its scope without error; the great Saints are always in some degree incredible or unintelligible; but Hugo's power is in his own personal courage and justice only; and his sanctity as clear, frank, and playful as the waves of his own Chartreuse well.*—*Præterita*, III. I.

170. THE BIBLE OF AMIENS.—Throughout the Sermon on this Amiens Mount, Christ never

* The original building was grouped round a spring in the rock, from which a runlet was directed through every cell.

appears, or is for a moment thought of, as the Crucified, nor as the Dead : but as the Incarnate Word—as the present Friend—as the Prince of Peace on Earth,—and as the Everlasting King in Heaven. What His life *is*, what His commands *are*, and what His judgment *will be*, are the things here taught : not what He once did, nor what He once suffered, but what He is now doing—and what He requires us to do. That is the pure, joyful, beautiful lesson of Christianity ; and the fall from that faith, and all the corruptions of its abortive practice, may be summed briefly as the habitual contemplation of Christ's death instead of His Life, and the substitution of His past suffering for our present duty.

Then secondly, though Christ bears not *His* cross, the mourning prophets,—the persecuted apostles—and the martyred disciples *do* bear theirs. For just as it is well for you to remember what your undying Creator is *doing* for you—it is well for you to remember what your dying fellow-creatures *have done* : the Creator you may at your pleasure deny or defy—the Martyr you can only forget ; deny, you cannot. Every stone of this building is cemented with his blood, and there is no furrow of its pillars that was not ploughed by his pain.

Keeping, then, these things in your heart, look back now to the central statue of Christ, and hear His message with understanding. He

holds the Book of the Eternal Law in His left hand; with His right He blesses,—but blesses on condition. “This do, and thou shalt live;” nay, in a stricter and more piercing sense, This *be*, and thou shalt live: to show Mercy is nothing—thy soul must be full of mercy; to be pure in act is nothing—thou shalt be pure in heart also.

And with this farther word of the unabolished law—“This if thou do *not*, this if thou art not, thou shalt die.”

Die (whatever Death means)—totally and irrevocably. There is no word in thirteenth-century Theology of the pardon (in our modern sense) of sins; and there is none of the Purgatory of them. Above that image of Christ with us, our Friend, is set the image of Christ over us, our Judge. For this present life—here is His helpful Presence. After this life there is His coming to take account of our deeds, and of our desires in them; and the parting asunder of the Obedient from the Disobedient, of the Loving from the Unkind, with no hope given to the last of recall or reconciliation. I do not know what commenting or softening doctrines were written in frightened minuscule by the Fathers, or hinted in hesitating whispers by the prelates of the early Church. But I know that the language of every graven stone, and every glowing window,—of things daily seen and universally understood by the people, was absolutely and alone, this

teaching of Moses from Sinai in the beginning, and of St. John from Patmos in the end, of the Revelation of God to Israel. . . .

With the subsequent quarrels between the two great sects of the corrupted Church, about prayers for the Dead, Indulgences to the Living, Papal supremacies, or Popular liberties, no man, woman, or child need trouble themselves in studying the history of Christianity: they are nothing but the squabbles of men, and laughter of fiends among its ruins. The Life, and Gospel, and Power of it, are all written in the mighty works of its true believers: in Normandy and Sicily, on river islets of France and in the river glens of England, on the rocks of Orvieto, and by the sands of Arno. But of all, the simplest, completest, and most authoritative in its lessons to the active mind of North Europe, is this on the foundation stones of Amiens.

Believe it or not, reader, as you will: understand only how thoroughly it *was* once believed; and that all beautiful things were made, and all brave deeds done in the strength of it—until what we may call “this present time,” in which it is gravely asked whether Religion has any effect on morals, by persons who have essentially no idea whatever of the meaning of either Religion or Morality.

Concerning which dispute, this much perhaps you may have the patience finally to read, as the

Flèche of Amiens fades in the distance, and your carriage rushes towards the Isle of France, which now exhibits the most admired patterns of European Art, intelligence, and behaviour.

All human creatures, in all ages and places of the world, who have had warm affections, common sense and self-command, have been, and are, Naturally Moral. Human nature in its fulness is necessarily Moral,—without Love, it is inhuman, without sense,* inhuman,—without discipline, inhuman.

In the exact proportion in which men are bred capable of these things, and are educated to love, to think, and to endure, they become noble,—live happily, die calmly: are remembered with perpetual honour by their race, and for the perpetual good of it. All wise men know and have known these things, since the form of man was separated from the dust. The knowledge and enforcement of them have nothing to do with religion: a good and wise man differs from a bad and idiotic one, simply as a good dog from a cur, and as any manner of dog from a wolf or a weasel. And if you are to believe in, or preach without half believing in, a spiritual world or law—only in the hope that whatever you do, or anybody else does, that is foolish or beastly, may be in them and by them mended and patched and pardoned and

* I don't mean æsthesis,—but *vous*, if you *must* talk in Greek slang.

worked up again as good as new—the less you believe in—and, most solemnly, the less you talk about—a spiritual world, the better.

But if, loving well the creatures that are like yourself, you feel that you would love, still more dearly, creatures better than yourself—were they revealed to you;—if, striving with all your might to mend what is evil, near you and around, you would fain look for a day when some Judge of all the Earth shall wholly do right, and the little hills rejoice on every side; if, parting with the companions that have given you all the best joy you had on Earth, you desire ever to meet their eyes again and clasp their hands,—where eyes shall no more be dim, nor hands fail;—if, preparing yourselves to lie down beneath the grass in silence and loneliness, seeing no more beauty, and feeling no more gladness—you would care for the promise to you of a time when you should see God's light again, and know the things you have longed to know, and walk in the peace of everlasting Love—*then*, the Hope of these things to you is religion, the Substance of them in your life is Faith. And in the power of them, it is promised us, that the kingdoms of this world shall yet become the kingdoms of our Lord and of His Christ.—*Bible of Amiens*, IV., § 52–60.

171. THE LORD'S SUPPER (a letter to a lady).
—You probably will be having a dinner-party

to-day ; now, please do this, and remember I am quite serious in what I ask you. We all of us, who have any belief in Christianity at all, wish that Christ were alive now. Suppose, then, that He is. I think it very likely that if He were in London, you would be one of the people whom He would take some notice of. Now, suppose He has sent you word that He is coming to dine with you to-day ; but that you are not to make any change in your guests on His account ; that He wants to meet exactly the party you have ; and no other. Suppose you have just received this message, and that St. John has also left word, in passing, with the butler, that his Master will come alone ; so that you won't have any trouble with the Apostles. Now this is what I want you to do. First, determine what you will have for dinner. You are not ordered, observe, to make no changes in your bill of fare. Take a piece of paper, and absolutely *write* fresh orders to your cook,—you can't realise the thing enough without writing. That done, consider how you will arrange your guests—who is to sit next Christ on the other side—who opposite, and so on ; finally, consider a little what you will talk about, supposing, which is just possible, that Christ should tell you to go on talking as if He were not there, and never to mind *Him*. You couldn't, you will tell me ? Then, my dear lady, how can you in general ? Don't you profess—nay, don't

you much more than profess—to believe that Christ *is* always there, whether you see Him or not? Why should the seeing make such a difference?—*F. C.*, Letter 46.

172. DIVINE SERVICE. — “Do justice and judgment.” That’s your Bible order; that’s the “Service of God,”—not praying nor psalm-singing. You are told, indeed, to sing psalms when you are merry, and to pray when you need anything; and, by the perverseness of the evil Spirit in us, we get to think that praying and psalm-singing are “service.” If a child finds itself in want of anything, it runs in and asks its father for it—does it call that doing its father a service? If it begs for a toy or a piece of cake—does it call that serving its father? That, with God, is prayer, and He likes to hear it: He likes you to ask Him for cake when you want it; but He doesn’t call that “serving Him.” Begging is not serving: God likes mere beggars as little as you do—He likes honest servants,—not beggars. So when a child loves its father very much, and is very happy, it may sing little songs about him; but it doesn’t call that serving its father; neither is singing songs about God, serving God. It is enjoying ourselves, if it’s anything; most probably it is nothing; but if it’s anything it is serving ourselves, not God. And yet we are impudent enough to call our beggings

and chauntings "Divine service:" we say, "Divine service will be 'performed'" (that's our word—the form of it gone through) "at so-and-so o'clock." Alas; unless we perform Divine service in every willing act of life, we never perform it at all. The one Divine work—the one ordered sacrifice—is to do justice; and it is the last we are ever inclined to do. Anything rather than that! As much charity as you choose, but no justice. "Nay," you will say, "charity is greater than justice." Yes, it is greater; it is the summit of justice—it is the temple of which justice is the foundation. But you can't have the top without the bottom; you cannot build upon charity. You must build upon justice, for this main reason, that you have not, at first, charity to build with. It is the last reward of good work. Do justice to your brother (you can do that whether you love him or not), and you will come to love him. But do injustice to him, because you don't love him; and you will come to hate him.—*C. W. O.*, I., § 39.

173. SENTIMENTAL RELIGION.—When any of you next go abroad, observe, and consider the meaning of, the sculptures and paintings, which of every rank in art, and in every chapel and cathedral, and by every mountain path, recall the hours, and represent the agonies, of the Passion of Christ: and try to form some estimate

of the efforts that have been made by the four arts of eloquence, music, painting, and sculpture, since the twelfth century, to wring out of the hearts of women the last drops of pity that could be excited for this merely physical agony: for the art nearly always dwells on the physical wounds or exhaustion chiefly, and degrades, far more than it animates, the conception of pain.

Then try to conceive the quantity of time, and of excited and thrilling emotion, which have been wasted by the tender and delicate women of Christendom during these last six hundred years, in thus picturing to themselves, under the influence of such imagery, the bodily pain, long since passed, of One Person:—which, so far as they indeed conceived it to be sustained by a Divine Nature, could not for that reason have been less endurable than the agonies of any simple human death by torture: and then try to estimate what might have been the better result, for the righteousness and felicity of mankind, if these same women had been taught the deep meaning of the last words that were ever spoken by their Master to those who had ministered to Him of their substance: “Daughters of Jerusalem, weep not for me, but weep for yourselves, and for your children.” If they had but been taught to measure with their pitiful thoughts the tortures of battle-fields—the slowly consuming plagues of death in the starving

children, and wasted age, of the innumerable desolate those battles left ;—nay, in our own life of peace, the agony of unnurtured, untaught, unhelped creatures, awaking at the grave's edge to know how they should have lived ; and the worse pain of those whose existence, not the ceasing of it, is death ; those to whom the cradle was a curse, and for whom the words they cannot hear, “ashes to ashes,” are all that they have ever received of benediction. These,—you who would fain have wept at His feet, or stood by His cross,—these you have always with you ! Him, you have not always.—*L. A.*, II., § 57.

174. PRACTICAL RELIGION.—The greatest of all the mysteries of life, and the most terrible, is the corruption of even the sincerest religion, which is not daily founded on rational, effective, humble, and helpful action. Helpful action, observe ! for there is just one law, which, obeyed, keeps all religions pure—forgotten, makes them all false. Whenever in any religious faith, dark or bright, we allow our minds to dwell upon the points in which we differ from other people, we are wrong, and in the devil's power. That is the essence of the Pharisee's thanksgiving—“Lord, I thank Thee that I am not as other men are.” At every moment of our lives we should be trying to find out, not in what we differ with other people, but in what we agree with them ; and the moment we

find we can agree as to anything that should be done, kind or good, (and who but fools couldn't?) then do it; push at it together; you can't quarrel in a side-by-side push; but the moment that even the best men stop pushing, and begin talking, they mistake their pugnacity for piety, and it's all over. I will not speak of the crimes which in past times have been committed in the name of Christ, nor of the follies which are at this hour held to be consistent with obedience to Him; but I *will* speak of the morbid corruption and waste of vital power in religious sentiment, by which the pure strength of that which should be the guiding soul of every nation, the splendour of its youthful manhood, and spotless light of its maidenhood, is averted or cast away. You may see continually girls who have never been taught to do a single useful thing thoroughly; who cannot sew, who cannot cook, who cannot cast an account, nor prepare a medicine, whose whole life has been passed either in play or in pride; you will find girls like these, when they are earnest-hearted, cast all their innate passion of religious spirit, which was meant by God to support them through the irksomeness of daily toil, into grievous and vain meditation over the meaning of the great Book, of which no syllable was ever yet to be understood but through a deed; all the instinctive wisdom and mercy of their womanhood made vain, and the glory of their pure consciences

warped into fruitless agony concerning questions which the laws of common serviceable life would have either solved for them in an instant, or kept out of their way. Give such a girl any true work that will make her active in the dawn, and weary at night, with the consciousness that her fellow-creatures have indeed been the better for her day, and the powerless sorrow of her enthusiasm will transform itself into a majesty of radiant and beneficent peace.

So with our youths. We once taught them to make Latin verses, and called them educated ; now we teach them to leap and to row, to hit a ball with a bat, and call them educated. Can they plough, can they sow, can they plant at the right time, or build with a steady hand ? Is it the effort of their lives to be chaste, knightly, faithful, holy in thought, lovely in word and deed ? Indeed it is, with some, nay, with many, and the strength of England is in them, and the hope ; but we have to turn their courage from the toil of war to the toil of mercy ; and their intellect from dispute of words to discernment of things ; and their knighthood from the errantry of adventure to the state and fidelity of a kingly power. And then, indeed, shall abide, for them and for us, an incorruptible felicity, and an infallible religion ; shall abide for us Faith, no more to be assailed by temptation, no more to be defended by wrath and by fear ;—shall abide with us Hope, no more to be

quenched by the years that overwhelm, or made ashamed by the shadows that betray :—shall abide for us, and with us, the greatest of these ; the abiding will, the abiding name, of our Father. For the greatest of these is Charity.—*S. and L.*, III., § 140.

175. PRIDE OF FAITH AND PRIDE OF SCIENCE.—In these days you have to guard against the fatallest darkness of the two opposite Prides ;—the Pride of Faith, which imagines that the nature of the Deity can be defined by its convictions ; and the Pride of Science, which imagines that the energy of Deity can be explained by its analysis.

Of these, the first, the Pride of Faith, is now, as it has been always, the most deadly, because the most complacent and subtle :—because it invests every evil passion of our nature with the aspect of an angel of light, and enables the self-love, which might otherwise have been put to wholesome shame, and the cruel carelessness of the ruin of our fellow-men, which might otherwise have been warmed into human love, or at least checked by human intelligence, to congeal themselves into the mortal intellectual disease of imagining that myriads of the inhabitants of the world for four thousand years have been left to wander and perish, many of them everlastingly, in order that, in fulness of time, divine truth might be preached

sufficiently to ourselves : with this farther ineffable mischief for direct result, that multitudes of kindly-disposed, gentle, and submissive persons, who might else by their true patience have alloyed the hardness of the common crowd, and by their activity for good balanced its misdoing, are withdrawn from all such true services of man, that they may pass the best part of their lives in what they are told is the service of God ; *namely, desiring what they cannot obtain, lamenting what they cannot avoid, and reflecting on what they cannot understand.**

This, I repeat, is the deadliest, but for you, under existing circumstances, it is becoming daily, almost hourly, the least probable form of Pride. That which you have chiefly to guard against consists in the overvaluing of minute though correct discovery ; the groundless denial of all that seems to you to have been groundlessly affirmed ; and the interesting yourselves too curiously in the progress of some scientific minds, which in their judgment of the universe can be compared to nothing so accurately as to the woodworms in the panel of a picture by some great painter, if we may conceive them as tasting with discrimination of the wood, and with repugnance of the colour, and declaring that even this unlooked-for and undesirable combination

* This concentrated definition of monastic life is of course to be understood only of its more enthusiastic forms.

is a normal result of the action of molecular Forces.—*L. A.*, II., § 38-40.

176. MIRACLES.—We have fallen into a careless habit of using the words *supernatural* and *superhuman* as if equivalent. A human act may be super-doggish, and a Divine act super-human; yet all three acts absolutely Natural. It is, perhaps, as much the virtue of a Spirit to be inconstant as of poison to be sure, and therefore always impossible to weigh the elements of moral force in the balance of an apothecary.

It is true that, in any abstract reflection on these things, one is instantly brought to pause by questions of the reasonableness, the necessity, or the expedient degree of miracle. Christ walks on the water, overcoming gravity to that extent. Why not have flown, to overcome it altogether? He feeds the multitude by breaking existent loaves; why not have commanded the stones into bread? Or, instead of miraculously feeding either an assembly or a nation, why not enable them, like Himself, miraculously to fast for the needful time? And in generally admitting the theories of pastoral miracle the instant question submits itself,—Supposing a nation wisely obedient to divinely appointed ministers of a sensible Theocracy, how much would its government be miraculously assisted, and how many of its affairs brought to miraculous prosperity of issue? Would

its enemies be destroyed by angels, and its food poured down upon it from the skies, or would the supernatural aid be limited to diminishing the numbers of its slain in battle, or to conducting its merchant ships safely, or instantaneously, to the land whither they would go?

But no progress can be made, and much may be prevented, in the examination of any really difficult human problem, by thus approaching it on the hypothetical side. Such approach is easy to the foolish, pleasant to the proud, and convenient to the malicious, but absolutely fruitless of practical result. Our modesty and wisdom consist alike in the simple registry of the facts cognisable by us, and our duty, in making active use of them for the present, without concerning ourselves as to the possibilities of the future. And the two main facts we have to deal with are that the historical record of miracle is always of inconstant power, and that our own actual energies are inconstant almost in exact proportion to their worthiness.

First, I say, the history of miracle is of inconstant power. St. Paul raises Eutychus from death, and his garments effect miraculous cure; yet he leaves Trophimus sick at Miletum, recognises only the mercy of God in the recovery of Epaphroditus, and, like any uninspired physician, recommends Timothy wine for his infirmities. And in the second place, our own

energies are inconstant almost in proportion to their nobleness. We breathe with regularity, and can calculate upon the strength necessary for common tasks. But the record of our best work, and of our happiest moments, is always one of success which we did not expect, and of enthusiasm which we could not prolong.—*Nature and Authority of Miracle* (*O. R.*, II., § 274–276).

177. PRAYER.—“And Elijah the Tishbite, who was of the inhabitants of Gilead, said unto Ahab, As the Lord God of Israel liveth, before whom I stand, there shall not be dew nor rain these years, but according to my word.”

Your modern philosophers have explained to you the absurdity of all that: you think? . . .

Do these modern scientific gentlemen fancy that nobody, before they were born, knew the laws of cloud and storm, or that the mighty human souls of former ages, who every one of them lived and died by prayer, and in it, did not know that in every petition framed on their lips they were asking for what was not only fore-ordained, but just as probably fore-*done*? or that the mother, pausing to pray before she opens a letter from Alma or Balaclava, does not know that already he is saved for whom she prays, or already lies festering in his shroud? The whole confidence and glory of prayer is in its appeal to a Father who knows our necessities before we

ask, who knows our thoughts before they rise in our hearts, and whose decrees, as unalterable in the eternal future as in the eternal past, yet in the close verity of visible fact, bend, like reeds, before the fore-ordained and faithful prayers of His children.—*An Oxford Lecture* (O. R., II., § 286).

178. THE LORD'S PRAYER.—Is not every one of its petitions for a perfect state? and is not this last clause of it, of which we are to think to-day—if fully understood—a petition not only for the restoration of Paradise, but of Paradise in which there shall be no deadly fruit, or, at least, no tempter to praise it? And may we not admit that it is probably only for want of the earnest use of this last petition that not only the preceding ones have become formal with us, but that the private and simply restricted prayer for the little things we each severally desire, has become by some Christians dreaded and unused, and by others used faithlessly, and therefore with disappointment?

And is it not for want of this special directness and simplicity of petition, and of the sense of its acceptance, that the whole nature of prayer has been doubted in our hearts, and disgraced by our lips; that we are afraid to ask God's blessing on the earth when the scientific people tell us He has made previous arrangements to curse it; and

that instead of obeying, without fear or debate, the plain order, "Ask, and ye shall receive, that your joy may be full," we sorrowfully sink back into the apology for prayer, that "it is a wholesome exercise even when fruitless," and that we ought piously always to suppose that the text really means no more than "Ask, and ye shall *not* receive, that your joy may be *empty*"?

Supposing we were first all of us quite sure that we *had* prayed, honestly, the prayer against temptation, and that we would thankfully be refused anything we had set our hearts upon, if indeed God saw that it would lead us into evil, might we not have confidence afterwards that He in whose hand the king's heart is, as the rivers of water, would turn our tiny little hearts also in the way that they should go, and that *then* the special prayer for the joys He taught them to seek would be answered to the last syllable, and to overflowing?

It is surely scarcely necessary to say, farther, what the holy teachers of all nations have invariably concurred in showing,—that faithful prayer implies always correlative exertion; and that no man can ask honestly or hopefully to be delivered from temptation, unless he has himself honestly and firmly determined to do the best he can to keep out of it. But in modern days, the first aim of all Christian parents is to place their children in circumstances where the temptations (which they

are apt to call "opportunities") may be as great and as many as possible; where the sight and promise of "all these things" in Satan's gift may be brilliantly near; and where the act of "falling down to worship me" may be partly concealed by the shelter, and partly excused, as involuntary, by the pressure, of the concurrent crowd.—*The Lord's Prayer and the Church* (O. R., II., § 244–246).

179. INSPIRATION.—The only confidence, and the only safety which in such matters we can either hold or hope, are in our own desire to be rightly guided, and willingness to follow in simplicity the guidance granted. But all our conceptions and reasonings on the subject of inspiration have been disordered by our habit, first of distinguishing falsely—or at least needlessly—between inspiration of words and of acts; and secondly by our attribution of inspired strength or wisdom to some persons or some writers only, instead of to the whole body of believers, in so far as they are partakers of the Grace of Christ, the Love of God, and the Fellowship of the Holy Ghost. In the degree in which every Christian receives, or refuses, the several gifts expressed by that general benediction, he enters or is cast out from the inheritance of the saints,—in the exact degree in which he denies the Christ, angers the Father, and grieves the Holy Spirit, he becomes uninspired

or unholy,—and in the measure in which he trusts Christ, obeys the Father, and consents with the Spirit, he becomes inspired in feeling, act, word, and reception of word, according to the capacities of his nature. He is not gifted with higher ability, nor called into new offices, but enabled to use his granted natural powers, in their appointed place, to the best purpose. A child is inspired as a child, and a maiden as a maiden ; the weak, even in their weakness, and the wise, only in their hour.

That is the simply determinable *theory* of the inspiration of all true members of the Church ; its truth can only be known by proving it in trial ; but I believe there is no record of any man's having tried and declared it vain.

Beyond this theory of general inspiration, there is that of especial call and command, with actual dictation of the deeds to be done or words to be said. I will enter at present into no examination of the evidences of such separating influence ; it is not claimed by the Fathers of the Church, either for themselves, or even for the entire body of the Sacred writers, but only ascribed to certain passages dictated at certain times for special needs : and there is no possibility of attaching the idea of infallible truth to any form of human language in which even these exceptional passages have been delivered to us. But this is demonstrably true of the entire volume of them, as we have it, and read,

—each of us as it may be rendered in his native tongue; that, however mingled with mystery which we are not required to unravel, or difficulties which we should be insolent in desiring to solve, it contains plain teaching for men of every rank of soul and state in life, which so far as they honestly and implicitly obey, they will be happy and innocent to the utmost powers of their nature, and capable of victory over all adversities, whether of temptation or pain.—*Bible of Amiens*, III., § 48, 49.

180. THE MYSTERY OF PAIN.—I saw it lately given as one of the incontrovertible discoveries of modern science, that all our present enjoyments were only the outcome of an infinite series of pain. I do not know how far the statement fairly represented—but it announced as incapable of contradiction—this melancholy theory. If such a doctrine is indeed abroad among you, let me comfort some, at least, with its absolute denial. That in past æons, the pain suffered throughout the living universe passes calculation, is true; that it is infinite, is untrue; and that all our enjoyments are based on it, contemptibly untrue. For, on the other hand, the pleasure felt through the living universe during past ages is incalculable also, and in higher magnitudes. Our own talents, enjoyments, and prosperities, are the outcome of that happiness with its energies, not of the death that

ended them. So manifestly is this so, that all men of hitherto widest reach in natural science and logical thought have been led to fix their minds only on the innumerable paths of pleasure, and ideals of beauty, which are traced on the scroll of creation, and are no more tempted to arraign as unjust, or even lament as unfortunate, the essential equivalent of sorrow, than in the seven-fold glories of sunrise to deprecate the mingling of shadow with its light.

This, however, though it has always been the sentiment of the healthiest natural philosophy, has never, as you well know, been the doctrine of Christianity. That religion, as it comes to us with the promise of a kingdom in which there shall be no more Death, neither sorrow nor crying, so it has always brought with it the confession of calamity to be at present in patience of mystery endured; and not by us only, but apparently for our sakes, by the lower creatures, for whom it is inconceivable that any good should be the final goal of ill. Towards these, the one lesson we have to learn is that of pity. For all human loss and pain, there is no comfort, no interpretation worth a thought, except only in the doctrine of the Resurrection; of which doctrine, remember, it is an immutable historical fact that all the beautiful work, and all the happy existence of mankind, hitherto, has depended on, or consisted in, the hope of it.—*A. E.*, I.

181. THE PLEASURES OF FAITH.—We continually hear of the trials, sometimes of the victories, of Faith,—but scarcely ever of its pleasures. Whereas, at this time,* you will find that the chief delight of all good men was in the recognition of the goodness and wisdom of the Master, who had come to dwell with them upon earth. It is almost impossible for you to conceive the vividness of this sense in them; it is totally impossible for you to conceive the comfort, peace, and force of it. In everything that you now do or seek, you expose yourselves to countless miseries of shame and disappointment, because in your doing you depend on nothing but your own powers, and in seeking choose only your own gratification. You cannot for the most part conceive of any work but for your own interests, or the interests of others about whom you are anxious in the same faithless way; everything about which passion is excited in you or skill exerted is some object of material life, and the idea of doing anything except for your own praise or profit has narrowed itself into little more than the precentor's invitation to the company with little voice and less practice to "sing to the praise and glory of God."

I have said that you cannot imagine the feeling of the energy of daily life applied in the real meaning of those words. You cannot imagine

* [In the Early Christian Ages.]

it, but you *can* prove it. Are any of you willing, simply as a philosophical experiment in the greatest of sciences, to adopt the principles and feelings of these men of a thousand years ago for a given time, say for a year? It cannot possibly do you any harm to try, and you cannot possibly learn what is true in these things, without trying. If after a year's experience of such method you find yourself no happier than before, at least you will be able to support your present opinions at once with more grace and more modesty; having conceded the trial it asked for, to the opposite side. Nor in acting temporarily on a faith you do not see to be reasonable, do you compromise your own integrity more, than in conducting, under a chemist's directions, an experiment of which he foretells inexplicable consequences. And you need not doubt the power you possess over your own minds to do this. Were faith not voluntary, it could not be praised, and would not be rewarded.

If you are minded thus to try, begin each day with Alfred's prayer,—*fiat voluntas tua*; resolving that you will stand to it, and that nothing that happens in the course of the day shall displease you. Then set to any work you have in hand with the sifted and purified resolution that ambition shall not mix with it, nor love of gain, nor desire of pleasure more than is appointed for you; and that no anxiety shall touch you as to its issue, nor any

impatience nor regret if it fail. Imagine that the thing is being done through you, not by you ; that the good of it may never be known, but that at least, unless by your rebellion or foolishness, there can come no evil into it, nor wrong chance to it. Resolve also with steady industry to do what you can for the help of your country and its honour, and the honour of its God ; and that you will not join hands in its iniquity, nor turn aside from its misery ; and that in all you do and feel you will look frankly for the immediate help and direction, and to your own consciences, expressed approval, of God. Live thus, and believe, and with swiftness of answer proportioned to the frankness of the trust, most surely the God of hope will fill you with all joy and peace in believing.—*Pleasures of England*, II.
